**Learn Blackberry Games Development** Carol Hamer,Andrew Davison,2010-04-29 BlackBerry smart phones aren't just for business. In fact, throw away that boring spreadsheet, tear up that yearly budget report—the BlackBerry is a lean, mean game-playing machine. Carol Hamer and Andrew Davison, expert software game developers, show you how to leverage the BlackBerry Java™ Development Environment (based on Java ME) to design and create fun, sophisticated game applications from role playing to dueling with light sabers. The BlackBerry: not as clumsy or as random as a blaster—an elegant device, for a more civilized age. In this book, Carol and Andrew give you the professional techniques you need to use music, 2D and 3D graphics, maps, and game design patterns to build peer-to-peer games, role playing games, and more for the BlackBerry.

**Mastering the Nikon** Darrell Young,2013-09-18 Mastering the Nikon D7100 by Darrell Young provides a wealth of experience-based information and insights for owners of the new D7100 camera. Darrell is determined to help the user navigate past the confusion that often comes with complex and powerful professional camera equipment. This book explores the features and capabilities of the camera in a way that far surpasses the user's manual. It guides readers through the camera features with step-by-step setting adjustments; color illustrations; and detailed how, when, and why explanations for each option. Every button, dial, switch, and menu configuration setting is explored in a user-friendly manner, with suggestions for setup according to various shooting styles. Darrell's friendly and informative writing style allows readers to easily follow directions, while feeling as if a friend dropped in to share his knowledge. The learning experience for new D7100 users goes beyond just the camera itself and covers basic photography technique.

*Global Positioning System* Bernhard Hofmann-Wellenhof,Herbert Lichtenegger,James Collins,2012-12-06 This book is dedicated to Dr. Benjamin William Remondi for many reasons. The project of writing a Global Positioning System (GPS) book was conceived in April 1988 at a GPS meeting in Darmstadt. Dr. Remondi discussed with me the need for an additional GPS textbook and suggested a possible joint effort. In 1989, I was willing to commit myself to such a project. Unfortunately, the timing was less than ideal for Dr. Remondi. Therefore, I decided to start the project with other coauthors. Dr. Remondi agreed and indicated his willingness to be a reviewer. I selected Dr. Herbert Lichtenegger, my colleague from the University of Technology at Graz, Austria, and Dr. James Collins from the United States. In my opinion, the knowledge of the three authors should cover the wide spectrum of GPS. Dr. Lichtenegger is a geodesist with broad experience in both theory and practice. He has specialized his research to geodetic astronomy including orbital theory and geodynamical phenomena. Since 1986, Dr. Lichtenegger's main interest is dedicated to GPS. Dr. Collins retired from the U.S. National Geodetic Survey in 1980, where he was the Deputy Director. For the past ten years, he has been deeply involved in using GPS technology with an emphasis on surveying. Dr. Collins was the founder and president of Geo/Hydro Inc. My own background is theoretically oriented. My first chief, Prof. Dr. Peter Meissl, was an excellent theoretician; and my former chief, Prof. Dr. Helmut Moritz, fortunately, still is.

**Software Engineering and Middleware** Thomas Gschwind,Cecilia Mascolo,2005-03-31 Middleware provides an integration framework for multiple and potentially diverse computing platforms. It allows developers to engineer distributed applications more easily, providing abstractions and primitives to handle distribution and coordination. Middleware is constantly facing new challenges. Today's advances in computing, including development of pervasive applications, exacerbates the diversity problem, introducing variations not only in terms of performance, but also in terms of environments and device characteristics. Software engineers are therefore challenged both in the area of the development of new and scalable middleware systems, where open, heterogeneous, component-based platforms should provide richer functionality and services, and in the area of application development, where tools to simplify the use of middleware solutions are necessary. Software Engineering and Middleware is the premier workshop for the research and practice community of software engineering working in both areas to present and discuss new ideas in this field. SEM2004 was the fourth international workshop on software engineering and middleware of the EDO/SEM workshop series. Previous workshops of this series were successfully held in 2002, 2000 and 1999. Most of the proceedings have been published by Springer in the Lecture Notes in Computer Science series.

*3D Scanning for Advanced Manufacturing, Design, and Construction* Gary C. Confalone,John Smits,Thomas Kinnare,2023-03-01 3D Scanning for Advanced Manufacturing, Design, and Construction Learn how 3D scanning technology drives advanced manufacturing and modern construction 3D scanning technology allows non-contact scanning of objects for unprecedented data collection, analysis, and modeling. 3D models created

this way are valuable at every stage of the design and build process and they have become a staple in additive manufacturing or 3D printing. As 3D printing transforms global industry at every scale, there has never been a better time for engineers and industrial professionals to be competitive in the area of 3D scanning, a multibillion-dollar market that continues to grow. 3D Scanning Technology for Advanced Manufacturing, Design, and Construction provides a comprehensive introduction to 3D scanning and its applications in both the AEC and manufacturing industries. After establishing the history and basic principles of 3D scanning, it includes discussions of the various scanner types and software interfaces, the use of 3D point clouds for analysis and reverse engineering, and much more. It covers the full range of technology and processes that engineers, architects, and manufacturing professionals use to increase accuracy and quality while reducing project timelines. Readers of 3D Scanning Technology for Advanced Manufacturing, Design, and Construction will also find: Case studies that highlight techniques useful for specific real-world applications Comparisons of various scanning devices and software that aid in choosing the proper technologies for a specific project Resources and references for online learning, organizations, and certifications Perfect for engineers, technicians, students, and industry professionals new to laser scanning, 3D Scanning Technology for Advanced Manufacturing, Design, and Construction will earn its place in libraries of technical, vocational, and continuing education audiences seeking to improve their knowledge of 3D scanning.

**Context Management for Distributed and Dynamic Context-Aware Computing** Ricardo Couto Antunes da Rocha,Markus Endler,2012-05-03 Research in context-aware computing has produced a number of middleware systems for context management. However, development of ubiquitous context-aware applications is still a challenge because most current middleware systems are still focused on isolated and static context-aware environments. Context-aware environments are inherently dynamic as a result of occasional additions or upgrade of sensors, applications or context inference mechanisms. Context Management for Distributed and Dynamic Context-Aware Computing proposes a novel architecture for context management based on the concept of context domains, allowing applications to keep context interests across distributed context management systems. The authors describe a distributed middleware that implements the aforementioned concepts, without compromising scalability and efficiency of context access.

**The New York City Vampire Murders** Glen C. Carrington,2016-05-27 The novel is about the series of eerie and bizarre homicides discovered in New York City where the police find corpses where the blood has been

sucked out of the bodies through two neck bite marks suggesting a vampire attack. With six bodies discovered in six months, was this the work of a supernatural being running around the historic and irreplaceable Americas largest metropolitan super city The Big Apple or someone or something trying to make it look like a vampire attack? After six months, the New York City Mayor decides to bring in more professional help to aide his Investigations Unit in solving these heinous crimes. For the last six months, the Mayor has successfully suppressed these horrific criminalities from the public, but his time is running out and once this knowledge hits the public airwaves the City will go into panic mode; his job will be at stake. The good citizens want safety and will direct their anger and angst at those elected to protect them and he would be the recipient of their tirade. The Mayor finally decides to bring in Detective William Monroe Lincoln, a retired detective with high profile case experience. The New York City Investigations Unit is against bringing in outside help but they have no choice due to the dire circumstances of sitting on an explosive story with so many bodies that have died in such a unique and disturbing manner. They too know that time is running out in trying to keep these crimes hidden from the public. If the top City Administrator is voted out of office the top Police Department administrators are also vulnerable to job security. The various characters and bizarre circumstances of the murders reveals very few clues to help reveal the perpetrator of this evil. With no help in sight, suddenly there is a telephone call by an individual saying hes the Vampire Killer, but this individual is suffering from severe dementia and barely knows who he is. Is he a real clue or just another irrelevant piece of information designed to mislead and confuse the authorities. Detective Lincoln must use his formidable analytical skills to search for the human killer or a vampire running around undetected in the nations largest City. He will meet The Amazing Crystal, a psychic also coming out of retirement to help the City solve the crime. Her insights and suggestions from her psychic connections are general in nature but also amazingly accurate. Is she for real? The police also discover the same strands of hair at two of the murder sites. Is this person the murderer or is it another false lead?

Retrogenesis 3 Robert Swann, The power hungry disgraced politician Colin Wilson, now forced into exile, plots deadly revenge against the scientists who have twice defeated his attempts to snatch control of their revolutionary world changing technology. Against their better judgement the scientists are forced once again to use their peaceful technology as a 'weapon of defence' to safeguard their Island home. Under relentless attack from Wilson and the unprincipled Federation of Nations the scientists and the other Islanders once more demonstrate their willingness to sacrifice everything except their integrity to safeguard the future of their discovery. In their safe hands the technology will be used to benefit mankind but in the wrong ones will probably destroy it. Who will prevail in the final deadly battle for control in which the winner takes all?

The Jolly Boyz Robert Lansford, 2013-02-19 This is the story of five young elementary school boys who are drawn into a basketball tournament by their school principal with no hope of winning. When a star player from a local high school team volunteers to coach the boys, miracles happen and the boys win the contest against all odds. An everlasting bond of fraternity is then formed and named The Jolly Boyz. This pledge of togetherness takes the young men through the youthful years of development, through high school, then college, reunions, marriages and culminating in a celebration cruise to the Caribbean. On an afternoon of great promise, the five members of the Jolly Boyz together with their wives and girlfriends, set sail from Tampa Bay. Right away however, they encounter an abandoned boat adrift in the Gulf of Mexico and things begin to get complex. Personality traits within the group, emerge together with memories of by gone days, testing the alliance. As the group gathers the resolve to overcome their differences, their bond grows stronger, developing into a pledge of re-commitment by each member of the Jolly Boyz to honor their vows of fidelity to their fraternity brothers, their wives and to life itself.

*Battles and Massacres on the Southwestern Frontier* Ronald K. Wetherington, Frances Levine, 2014-03-17 Battles and massacres are intimate affairs for combatants and others involved, their physical and emotional violence often stemming from fervor and fear. Although mass killing characterizes both battles and massacres, the two are profoundly different. Battles take place between armed forces; massacres are one-sided events in which the dead are mostly innocent victims. Yet the fog of war shrouds both massacres and battles in a functional amnesia. Participants remember what exactly happened during such a violent encounter only imperfectly,

and later clarity cannot always rectify accounts thus rendered. Even naming the events as battles or massacres already imposes an interpretive framework upon them. This unique study centers on four critical engagements between Anglo-Americans and American Indians on the southwestern frontier: the Battle of Cieneguilla (1854), the Battle of Adobe Walls (1864), the Sand Creek Massacre (1864), and the Mountain Meadows Massacre (1857). Editors Ronald K. Wetherington and Frances Levine juxtapose historical and archaeological perspectives on each event to untangle the ambiguity and controversy that surround both historical and more contemporary accounts of each of these violent outbreaks. Both disciplines, the contributors make clear, yield surprisingly similar narratives and interpretive agreement; and the lessons learned from these nineteenth-century killing fields about wartime reporting and command failures remain relevant today. Contributions by T. Lindsay Baker, J. Brett Cruse, Will Gorenfeld, Shannon A. Novak, Lars Rodseth, Douglas D. Scott, and Joe Watkins

*On the Move to Meaningful Internet Systems 2004: CoopIS, DOA, and ODBASE* Zahir Tari, 2004-10-11 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference, and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program, and only paid a heavily discounted fee for the Doctoral Symposium itself. (In fact their attendance was largely sponsored by the other participants!) If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems, and the resulting application created by the Internet and the so-called Semantic Web. For DOA 2004, the primary emphasis stayed on the distributed object infrastructure; for ODBASE 2004, it was the knowledge bases and methods required for enabling the use of formal semantics; and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues, such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.
