Upgrading Water Treatment Plants Renato Pinheiro,Glen Wagner,2001-05-31 Upgrading Water Treatment Plants is a comprehensive and practical guide providing the technical detail required to upgrade existing water treatment plants to increase processing efficiency and improve overall quality without the need for substantial investment into new physical plant installation. Based on practical experience and field tested methodology, this book is an invaluable reference for civil engineers, treatment plant managers and water scientists in consultancies, water utilities, government agencies and international organisations concerned with public health and water quality.

IUTAM Symposium on Mechanics of Granular and Porous Materials N.A. Fleck,A.C.F. Cocks,2012-12-06 This volume constitutes the Proceedings of the IUT AM Symposium on Mechanics of Granular and Porous Materials, held in Cambridge from 15th to 17th July 1996. The objectives were: 1. To review existing experimental results and practical phenomena on the flow and compaction of particulate media; 2. To review the current state of constitutive models, and their implementation for predicting the macroscopic response. 3. Identification of the shortcomings of existing models and procedures in understanding practical phenomena. The Symposium brought together the research communities of solid mechanics, materials science, geomechanics, chemical engineering and mathematics to review current knowledge of the flow and compaction of granular and porous media. The meeting emphasised the development and use of constitutive laws to model practical processes such as mixing, drainage and drying, compaction of metal and ceramic powders and soils, and instabilities associated with these processes. A common theme was to develop constitutive models from an understanding of the underlying physical mechanisms of deformation and fracture. It was particularly rewarding to find that the separate research communities came together during the meeting and came to a consensus as to the main mechanisms of deformation and failure of particulate and porous solids.

Tale of the Fox Harry Turtledove, 2000 Facing an invasion by the Gradi and their fierce gods, Gerin, ruler of Fox Keep, invokes all the supernatural help he can from the god Mavrix, the aloof but powerful Biton, and the more elemental gods beneath the ground. Meanwhile, other conflicts are arising to complicate matters.

The Taming of the Ray Marco Piccolino, 2003 Starting from two unpublished manuscripts, this book attempts to revive an extraordinary, albeit poorly known, season of scientific research of the late XVIII century, which, from the study of the peculiar properties of some singular fishes, leads, through the unpredictable path of science, to the discovery of the electric nature of nerve signal, and, moreover to the invention of the voltaic battery. Besides presenting a crucial transition phase in the natural philosophy of the Enlightenment, this book is written with the ambition of reviving the fascination of science and its history.

PCM is a major annual international conference bringing together researchers, developers, and educators in the field of multimedia from around the world. It covers a wide spectrum of multimedia research, from state-of-the-art theoretical breakthroughs to the practical systems of multimedia analysis and processing. PCM 2008 featured a comprehensive program including tutorials, keynote talks, regular oral presentations, special sessions, and poster sessions. This year, we - cepted 79 papers out of 210 submissions, giving an acceptance rate of 37%. In addition, 39 papers were accepted for poster presentation. The submissions were categorized into five different tracks: multimedia compression, communication and networking, multimedia processing, analysis and retrieval, multimedia databases, systems, and applications, multimedia human-computer interfaces, multimedia security and digital right management, with a total of 210 submissions from 18 countries and regions. Among the five tracks, “multimedia analysis and retrieval” received the most submissions (34% of the submissions).
