*External and Internal Analysis of Glaxo SmithKline* Felix Otieno, 2014-01-02 Research Paper (postgraduate) from the year 2012 in the subject Business economics - Business Management, Corporate Governance, grade: A, University of California, Berkeley, language: English, abstract: The common goal of any organization is to achieve its objectives which revolve around profit, survival and prosperity. Robert M. Grant (1991:22) identifies two routes to achieve their objective which includes the location of an industry favorable to earn a rate of return above the competitive level and attain a position of advantage over its competitors within the industry, allowing the company to earn return more than the average return of the industry. Duane Ireland et al (2005) mentioned that internal and external analysis is important for the managers in order to develop and implement the best strategy by evaluating the capabilities and resources of the firms and customer preferences in the market. Glaxo SmithKline (GSK) with a long history dating back to 18th century produce 9 billion Tums tablet, 6 billion Panadol tablets and 600 million tubes every year with more than 200 million customers worldwide and spends more than £300,000 every hour into research and development for innovation in medicine. The company has been able to compete in the industry with strong customer base all over the world, just because of its business strategy which is aimed at increasing growth, reduce risk and improve GSK's long term financial performance which include growing a diversified global business, deliver more products of value and simplify GSK's operating model. The present study aims at identifying the key drivers for change, critical success factors, key business strategies over the past five years using Porters generic strategies and resource and capabilities of GlaxoSmithKline over the past ten years so as to analyze the business strategies.

**Glycogen Synthase Kinase 3 (GSK-3) and Its Inhibitors** Ana Martinez, Ana Castro, Miguel Medina, 2006-11-17 Many researchers believe that GSK-3 and its inhibitors could lead to effective treatments for neurodegenerative disorders, type II diabetes, depression and bipolar disorder, and some forms of cancer. This book provides a thorough introduction to GSK-3, presents up-to-date information, and mentions the birth of several chemical families of GSK-3 inhibitors with varying selectivity. It's a great reference for researchers in drug design and development.

**A Business Deconstructed. Company Analysis of GlaxoSmithKline Plc.** Andrea Verhohlen, 2016-03-01 Seminar paper from the year 2008 in the subject Business economics - Business Management, Corporate Governance, grade: 1,3, New College Durham, 15 entries in the bibliography, language: English, abstract: GlaxoSmithKline plc. (GSK) was formed in December 2000

by the merger of Glaxo Wellcome and SmithKline Beecham and is now one of the world's leading pharmaceutical and healthcare companies. The organisation is headquartered in London and has further production facilities in 114 countries within Europe as well as in Northern America and Asia. Apart from pharmaceutical products and vaccines, health- and sanitary items are also manufactured and sold in over 140 countries. (Annual Report, 2007, p.4) GSK employs over 103,000 people around the world. In 2007, women accounted for 24 per cent of senior managers and 37 per cent of all managers while minorities made up 19.1 per cent of employees in the UK workforce. (Corporate Responsibility Report, 2007, p.100) The organisation invests in its own research to develop new drug substances. One in six employees' works in the area of research and in 2007 GSK spent over 13 million pounds every day for R&D. Research efforts are also directed at diseases, which are mainly widespread in underdeveloped countries.

Neurological Functions of the Masterswitch Protein Kinase – GSK-3 Oksana Kaidanovich-Beilin, Jean-Martin Beaulieu, Richard S. Jope, Jim R. Woodgett, The functions of the brain that allow us to think, feel, move, and perceive the world are the result of an exchange of information within a network composed of millions of specialized cells called neurons and glia. Neurons use neurotransmitters and other extracellular messengers to communicate with each other, and to constantly update and re-organize their network of connections in a process known as neural plasticity. In order to respond to these extracellular signals, neurons are equipped with specialized receptors that can recognize a single neurotransmitter a bit like a lock would recognize a key. They do this by activating or inhibiting a class of specialized signaling proteins and second messengers. Typically, signaling proteins are themselves organized in networks or pathways in which they activate or inhibit each other in order to integrate the mass of information received by a single cell and to regulate the biological functions of this cell. As we can see, rather than simply being a network of neurons, the brain can be seen as a sort of “Russian doll” in which each neuron is at the same time a part of networks with other neurons and the receptacle of many networks composed of signaling proteins. Two individual genes encode two paralogous signaling proteins: Glycogen Synthase Kinase -3 alpha and beta (GSK-3a, GSK-3b), named for its ability to phosphorylate a key metabolic enzyme of glycogen synthesis, glycogen synthase. This unique “glamour and gloom” protein kinase, has been intriguing many researches for over 30 years by its unusual features, still unknown mechanisms of its activation, its regulation by multiple “key” intracellular pathways, and its capacity to influence the functions of many substrates. Since GSK-3 was discovered, there has been significant progress in

elucidating its regulatory roles in the neuron and the structure and functions of the brain. Lithium has been used as a gold standard in the treatment of bipolar disorder for 60 years; and “GSK-3’s renaissance” in psychiatry began with the discovery of GSK-3 as lithium's intracellular target. Since then, GSK3 has been implicated in the pathogenesis of mood disorders, schizophrenia, Alzheimer’s disease, ADHD, multiple sclerosis, Fragile X syndrome and Huntington disease. Connections to these and other diseases has led over the last 10 years to the generation of multiple types of GSK-3 inhibitors as promising therapeutic treatments for the aforementioned pathological conditions. During last couple years new genetic models have been generated, including conventional and conditional mouse models, allowing the discovery of new roles of GSK-3 in the mechanism of neurotransmitter action, neurodevelopment, learning and memory formation, GSK-3’s gene - effect on mouse behavior, and other functions. Thus, GSK-3 has been well-established as an intracellular second messenger for several neurotransmitter systems, and as an important therapeutic target of mood stabilizers, antipsychotics and psychomimetic drugs. The proposed Specific Topic for Frontiers in Neuroscience will be focused on the latest advances from leading laboratories in this area, subdivided into 5 topics: (1) GSK-3 history, mechanism of regulation, substrate specificity and comparison between the brain function of two GSK-3 genes through new animal models and cell biology approaches; (2) role of GSK-3 in neurodevelopment and neuronal structure; (3) involvement of GSK-3 in synaptic functions, learning and memory, and in serotonin and dopamine pathways; (4) role of GSK-3 in neuroinflammation, and application to the pathogenesis of multiple sclerosis, AD, schizophrenia, Fragile X, brain tumors, stroke and bipolar disorder; (5) development of GSK-3 inhibitors and their application in psychiatry, including special discussion about the mechanism of lithium action.

**Business strategy and accounting policies of GlaxoSmithKline (GSK) ,2021-10-12** Essay from the year 2021 in the subject Business economics - Investment and Finance, grade: 1,3, University of Bamberg, language: English, abstract: In order to analyse and interpret the business strategy and the resulting accounting policy choices and disclosures, this paper examines the macroeconomic environment as well as the industrial and firm level of GlaxoSmithKline during the accounting period 2019. Therefore, property, plant and equipment (PPE), intangible assets, business combinations, impairments as well as inventories are considered in more detail. In conclusion, the accounting and disclosure methods are evaluated with regard to their requirements and completeness.

**Price-Forecasting Models for Glaxosmithkline Plc GSK Stock Ton Viet Ta,2020-10-31** Do you want

to earn up to a 674% annual return on your money by two trades per day on Glaxosmithkline Plc GSK Stock? Reading this book is the only way to have a specific strategy. This book offers you a chance to trade GSK Stock at predicted prices. Eight methods for buying and selling GSK Stock at predicted low/high prices are introduced. These prices are very close to the lowest and highest prices of the stock in a day. All methods are explained in a very easy-to-understand way by using many examples, formulas, figures, and tables. The BIG DATA of the 8649 consecutive trading days (from July 9, 1986 to October 29, 2020) are utilized. The methods do not require any background on mathematics from readers. Furthermore, they are easy to use. Each takes you no more than 30 seconds for calculation to obtain a specific predicted price. The methods are not transient. They cannot be beaten by Mr. Market in several years, even until the stock doubles its current age. They are traits of Mr. Market. The reason is that the author uses the law of large numbers in the probability theory to construct them. In other words, you can use the methods in a long time without worrying about their change. The efficiency of the methods can be checked easily. Just compare the predicted prices with the actual price of the stock while referring to the probabilities of success which are shown clearly in the book (click the LOOK INSIDE button to read more information before buying this book). Depending on the number of investors who are interested in this book, the performance of the methods from the publication date will be added to the book after one year, and will be stated here in the description of the book too. You will then see that the methods in this book are outstanding or not. The book is very useful for Investors who have decided to buy the stock and keep it for a long time (as the strategy of Warren Buffett), or to sell the stock and pay attention to other stocks. The methods will help them to maximize profits for their decision. Day traders who buy and sell the stock many times in a day. Although each method is valid one time per day, the information from the methods will help the traders buy/sell the stock in the second time, third time or more in a day. Beginners to GSK Stock. The book gives an insight about the behavior of the stock. They will surely gain their knowledge of GSK Stock after reading the book. Everyone who wants to know about the U.S. stock market.

**Financialization and Strategy Julie Froud,Sukhdev Johal,Adam Leaver,Karel Williams,2006-04-18**  
Considering the recent impact of the capital market on corporate strategy, this text analyzes, through argument and supportive case studies, how pressures from the capital bull market of the 1990s and

bear market of the early 2000s, have reshaped management action and calculation in large, publicly quoted US and UK corporations. Beginning with the dissatisfaction with classical strategy and its limited engagement with the processes of financialization, the book moves on to cover three detailed company case studies (General Electric, Ford and GlaxoSmithKline) which use long run financial data and analysis of company and industry narratives to illustrate and explore key themes. The book emphasizes the importance of company and industry narrative, while also analyzing long term financial results, and helps to explain the limits of management action and the burden of expectations placed on corporate governance. Presenting financial and market information on trajectory in an accessible way, this book provides a distinctive, critical social science account of management in large UK and US corporations, and it is a valuable resource for students, scholars and researchers of business, management, political economy and non-mainstream economics. short listed for the 2007 IPEG Book Prize

Mennen, Abayomi, Zhou, Jian, Mead, 2010-12 Project Report from the year 2006 in the subject Communications - Public Relations, Advertising, Marketing, Social Media, grade: 65 % - B, University of Sunderland, course: Global Corporate Strategy, language: English, abstract: Mergers and acquisitions are of major importance in the pharmaceutical industry. In order to evaluate the dynamics of this particular industry, this paper critically evaluates the pre- and post- merger situation of GlaxoSmithKline concerning its ready-access to markets, know-how and management capability. Furthermore, strengths and weaknesses and merger's outcomes will be outlined. Critical push and pull factors affecting M&A activity in North America will be analysed, using Pfizer and Pharmacia as an example. In addition, general reasons for M&A failure in the pharmaceutical industry will be illustrated focussing on the M&A activity of GlaxoSmithKline. Finally, using two global pharmaceutical players (GSK and Astrazeneca), the merits and demerits of the McKinsey's five step programme will be discussed.

**Abstract:** Abstract Clinical trials on hepatic- and renal-impaired subjects appear to be common in the development of new drugs. There are medical, ethical, and regulatory reasons for such trials, relating to possible dose adjustments and limitations on indication. The objectives of this dissertation were to (i) project the global demand for hepatic- and for renal-impaired studies, in terms of number of studies and number of healthy and impaired trials subjects required, and dollar volumes of revenue generated; (ii) examine and quantify the safety profile of hepatic- and renal-impaired studies in terms of the body of data collected before commencement, and characterize other features such as typical location and number of publications generated; and (iii) comment on the full path of drug development in several drugs for which both hepatic- and renal-impairment studies were conducted. We started this investigation at the clinical trial register in the GlaxoSmithKline plc website at [ctr.gsk.co.uk](http://ctr.gsk.co.uk), which GSK, pursuant to court order and settlement, must maintain. From this body of data and from publicly available data on failure rates in drug development and on R&D budgets, and privately gathered information on costs and durations of in-patient stays, we tried to estimate the level of demand at GSK and in the pharmaceutical industry in general for these types of studies, in patient numbers and dollar amounts. We first enumerated the number of Phase I, Phase II, Phase III and Phase IV clinical trials GSK sponsored with respect to each drug listed in the GSK clinical trial register. We searched the listings of the individual Clinical Study Reports for all drugs listed on the GSK clinical trial register, searching for studies on subjects with i impaired hepatic or renal function. We examined and analyzed the body of Summaries of Clinical Study Reports for these studies, seeking to characterize the average (and range) of numbers of subjects of varying degrees of hepatic or renal impairment required, and the stage of development of the candidate drug before GSK undertook the hepatic - or renal-impaired study, to quantify the safety profile of these studies. We found that GSK is likely to conduct approximately 5 hepatic-impaired and 7 renal-impaired studies per year. The pharmaceutical industry as a whole will require more than 500 hepatic-impaired subjects and more than 1200 renal-impaired subjects for studies each year. Expenditures per year will total more than HK\$50 million for hepatic-

impaired studies and more than HK\$120 million for renal- impaired subjects, not counting the charges for healthy controls. We found that there is an average of respectively 4.5 or 5.4 years between the completion of the First-in-Man study and the commencement of the hepatic- or renal- impaired study. There is an average of respectively 150 or 200 subjects on whom safety data were collected in completed trials, before commencement of the hepatic- or renal-impaired study. These studies are almost all conducted in Europe (approximately 2/3) or the United States (approximately 1/3), with studies in the United States generating more than half the publications. Examining the full path of drug development for six of the GSK drugs tested on both hepatic- and renal-impaired subjects, a more sophisticated general pattern of drug development emerged than the simple Phase I/Phase II/Phase III paradigm. The pattern appears to be a careful pl

the subject Business economics - Supply, Production, Logistics, , course: MSc Project Management, language: English, abstract: Report on sustainable supply chain management attempts to integrate environmental, economic and social issues into normal supply chain practice. Defining the word sustainability is somewhat hard as it contains several characteristics depending on the point of understanding. Though, looking at the word beginning, sustainability is obtained from the Latin word “sustinere” which literally means “to hold up”. When looking up in various vocabularies, sustainability has the denotation of “preserve”, “support” or “endure”. Business sustainability is called as the management of the triple bottom line, it is a process by where corporations control their economic, social and environmental risks, responsibilities and prospects. Furthermore above 3 impressions are occasionally mentioned as people, planet and profit. Nevertheless, this method depends on an economical perception and do not entirely imprisonment the time component which is essential inside a sustainable business.
