Star Trek: Myriad Universes #2: Echoes and Refractions Keith R. A. DeCandido, Chris Roberson, Geoff Trowbridge, 2008-08-12 It's been said that for any event, there are an infinite number of possible outcomes. Our choices determine which outcome will follow, and therefore all possibilities that could happen do happen across countless alternate realities. In these divergent realms, known history is bent, like white light through a prism -- broken into a boundless spectrum of what-might-have-beens. But in those myriad universes, what might have been...is what actually happened. **THE CHIMES AT MIDNIGHT:** In a continuum where Spock died during childhood, an Andorian named Thelin became Captain Kirk's stalwart friend and first officer. But at the moment of Khan's final defeat, history takes an even stranger turn, and the emerging potential of Project Genesis is revealed as the galaxy's greatest hope...and its most ominous threat. **A GUTTED WORLD:** Terrorist Kira Nerys -- from a Bajor that was never liberated -- may hold the key to winning a war that has engulfed half the galaxy. But with the Romulans and the Klingons at each other's throats, and the Federation pulled into the conflict, even victory may not bring salvation. **BRAVE NEW WORLD:** Dr. Noonien Soong's dream has been realized: androids are now woven inextricably into the fabric of the Federation, revolutionizing Starfleet and transforming the quality of humanoid life. But when Soong's long-missing breakthrough creation, Data, mysteriously resurfaces, civilization reaches a crossroads that could lead to a bright new future, or to ruin.

Robots in Popular Culture Richard A. Hall, 2021-07-12 Robots in Popular Culture: Androids and Cyborgs in the American Imagination seeks to provide one go-to reference for the study of the most popular and iconic robots in American popular culture. In the last 10 years, technology and artificial intelligence (AI) have become not only a daily but a minute-by-minute part of American life—more integrated into our lives than anyone would have believed even a generation before. Americans have long known the adorable and helpful R2-D2 and the terrible possibilities of Skynet and its army of Terminators. Throughout, we have seen machines as valuable allies and horrifying enemies. Today, Americans cling to their mobile phones with the same affection that Luke Skywalker felt for the squat R2-D2. Meanwhile, our phones, personal computers, and cars have attained the ability to know and learn everything about us. This volume opens with essays about robots in popular culture, followed by 100 A-Z entries on the most famous AIs in film, comics, and more. Sidebars highlight ancillary points of interest, such as authors, creators, and tropes that illuminate the motives of various robots. The volume closes with a glossary of key terms and a bibliography providing students with resources to continue their study of what robots tell us about ourselves.

Across the nation, as the years-long civil war wages on, survival becomes the only way of life. Two sisters, Onyii and Ify, dream of more. Their lives have been marked by violence and political unrest. Still, they dream of peace, of hope, of a future together. And they're willing to fight an entire war to get there. Sustainable Futures for Climate Adaptation Benedict Anderson,2023-12-11 Considering sustainability as a flawed and restrictive term in practice, *Sustainable Futures for Climate Adaptation* argues that we must radically adapt humanity and reform society, cities, buildings, and our approach to migration in order to coexist in harmony with our natural environments. The book conceives an Earth-human coexistence where the world's regions are shared globally between all people, in contrast to a reality where we have lost touch with the natural world. It is this decoupling of humanity and nature that has brought us to the brink of climate disaster. In response, Benedict Anderson explores the concept of 'wearing our ecology', where human mobility is synchronized with the environment, merging people with landscapes, topographies, and geographies. Anderson argues that we need to create new migration routes for people moving between the Global South and North and establish flexible and adaptive living environments. Only by rethinking separations between urban and rural, resource extraction and consumption, racial prejudice and accessibility are we able to forge a closer partnership with nature to adapt to climate change and mitigate the worst of its effects. Touching on themes of adaptive urban design, racial and gender segregation and inequality, and climate apocalypticism, this book will be valuable reading for researchers, scholars, and upper-level students in the fields of urban studies, migration studies, human geography, ecology, politics,

and design.
