Bulletproofing the Psyche Kate Hendricks Thomas, David L. Albright Ph.D., 2018-05-03 This book presents the latest in neuroscience and resiliency research alongside the personal stories of military veterans to advocate for an empirically validated training protocol. In *Bulletproofing the Psyche: Preventing Mental Health Problems in Our Military and Veterans* editors Kate Hendricks Thomas and David L. Albright lead an interdisciplinary team of researchers, practitioners, and military veterans in calling for a new kind of training with a focus on bulletproofing the psyche: psychological resiliency skills training. They combine research and storytelling to argue that somatic protocols, a training method long used in the treatment sector to rewire the brain after trauma and a proven, valid alternative to drug and talk therapy, should be applied to the prevention and training sectors. Contributors include leaders in the fields of trauma research, military social work, and veterans' health. Students and scholars in the fields of social work, military psychology, social psychology, health promotion, organizational development, and institutional organization will find the research relevant, while clinicians, counselors, and mental health care providers working with military-connected communities may find the discussion of trauma treatment and intervention model transformative for their practice.

Climate Change and Crop Production Nouredine Benkeblia, 2018-12-07 Key features: Describes the effects and responses of the macro and micro levels of crops under the different components of climate change Reports on the adaptation and resilience of food production systems within the changing climate Covers how plants cope with the changing climate including physiological, biochemical, phenotype, and ecosystem responses Provides an in-depth discussion on the importance of agricultural education connected to climate change Presenting an overview of agroecology within the framework of climate change, this book looks at the impact of our changing climate on crop production and agroecosystems, reporting on how plants will cope with these changes, and how we can mitigate these negative impacts to ensure food production for the growing population. It explores

the ways that farmers can confront the challenges of climate change, with contributed chapters from around the world demonstrating the different challenges associated with differing climates. Examples are provided of the approaches being taken right now to expand the ecological, physiological, morphological, and productive potential of a range of crop types. Giving readers a greater understanding of the mechanisms of plant resilience to climate change, this book provides new insights into improving the productivity of an individual crop species as well as bringing resistance and resiliency to the entire agroecosystem. It offers a strong foundation for changing research and education programs so that they build the resistance and resilience that will be needed for the uncertain climate future ahead.

Imagining the Nation Daina Stukuls Eglitis, 2010-11-01 Every epoch produces its own notions of social change, and the post-Communist societies of Eastern Europe are no exception. *Imagining the Nation* explores the fate of contemporary Latvia, a small country with a big story that is relevant for anyone wishing to better understand the nature of post-Communist transitions. As Latvia and other former Soviet-bloc countries seek to rebuild and transform their societies, what is the central dynamic at work? In *Imagining the Nation*, Daina Stukuls Eglitis finds that in virtually all aspects of life the guiding sentiment among Latvians has been a desire for normality in the wake of the &deformations& that marked the half-century of Soviet rule. In seeking to return to normality, many people look to the West for models; others look back in time to the period of Latvian independence from 1918 to 1940 before the years of Soviet domination. Ultimately, the changes in Latvia and other Eastern European countries are closely tied to a vital reimagining of the past, as the logic of progress long associated with &revolution& is amalgamated with nostalgia for what is gone. The radiant utopias of revolution give way to widely shared aspirations for a return to the normal in politics, place names, private property, and even gender relations. Eglitis draws upon published and unpublished documents, campaign posters, maps, and monuments, as well as interviews with Latvians from all walks of life. The resulting picture of life in contemporary Latvia offers fresh perspective on a dilemma facing millions throughout the post-Communist world.

Neuroplasticity and Extracellular Proteolysis Jerzy W. Mozrzymas, Leszek Kaczmarek, 2016-05-18 Neuroplasticity refers to the ability of the Central Nervous System (CNS) to alter its structure and function in response to a variety of physiological and pathological processes such as development, cognition, injury or neurological diseases. Since more than four decades, studies on synaptic plasticity in the context of memory and learning attracted a remarkable interest. Soon after first seminal works on synaptic plasticity were published, research in this field was extended by studies on non-synaptic as well as structural plasticity towards a goal to understand cellular and molecular determinants of cognition. Over the past two decades, yet two additional crucial players in neuroplastic phenomena started to be intensely investigated – glial cells and the extracellular matrix (ECM). Growing awareness that glial cells, especially astrocytes, are important regulators of synaptic functions gave rise to a novel concept of a tri-partite synapse. Also, over the last two decades, a growing body of evidence has accumulated that the extracellular matrix (ECM) in the brain is strongly involved in regulation of neurons, in particular, in synaptic plasticity. Thus, a concept of tetra-partite synapse was put forward by some neuroscientists. The cross-talk between neuron-glia-ECM system involves enzymatic degradation of proteins or peptides and amino acids occurring in each of these brain constituents by means of a variety of proteases. Importantly, it has been realized that proteases such as serine proteases and matrix metalloproteinases, not only accompany “robust” phenomena such as cell division, or development or neurodegenerative conditions but may play a very subtle signaling functions, particularly important in memory acquisition. Indeed, the repertoire of substrates for these enzymes covers a wide variety of proteins known to play important role in the neuroplastic phenomena (e.g. BDNF, TNF- α , ephrin systems, various cell adhesion molecules, etc.). In result, the role of metalloproteinases and such serine proteases as tissue plasminogen activator (tPA), neuropsin or neurotrypsin in synaptic plasticity as well as in learning and memory has been particularly well demonstrated. It needs to be emphasized, however, that in spite of a remarkable progress in this field, several basic questions regarding molecular and cellular mechanisms remain unanswered.

Potential involvement of so many important players (various proteases and their substrates in neurons, glia and in ECM) points to an enormous potential for plasticity phenomena but makes also studies into underlying mechanisms particularly difficult. In the proposed Research Topic we provide both review of the current state of the art and present some original reports on specific aspects of the role of proteolysis in neuroplasticity phenomena. The present ebook starts with extensive reviews describing involvement of proteolysis not only in synaptic plasticity but also in regulating endogenous excitability and structural changes at the network, cellular and subcellular levels. Cross-talk between neuroplasticity and proteolysis is also emphasized in the context of development and in relation to various pathologies. Whereas in the first part of the present ebook, the major focus is on metalloproteinases, the successive articles address the role of neuropsin and thrombin. The Research Topic is concluded with a series of articles describing the components of extracellular matrix and adhesion proteins and their elaboration by mechanisms dependent directly or indirectly on proteolysis. We do hope that the present ebook will further stimulate the interest in the fascinating investigations into neuroplasticity-proteolysis cross-talk.

Computer Generated Physical Properties Stan Bumble,1999-06-01 Computer Generated Physical Properties offers the environmental scientist a basis to predict the properties of molecules and reengineer them to remove those properties that are harmful to the environment. This technology is currently used in other fields and is now becoming popular in the environmental engineering field because of its pollution prevention and waste reduction capabilities. This book, interdisciplinary in scope, treats the physical properties of matter as generated by computers. It covers a wide variety of topics pointing towards synthesizing new molecules to substitute for reactants, intermediaries, and products in industrial processes with better physical and environmental properties than the original. The author achieves this with a spreadsheet program called SYNPROPS that operates on a PC computer with optimization features. A radar type graph - one for each property - visually sorts the various groups in order of their contribution to the property, creating the necessity for a computer to obtain answers for the structure of the optimum molecules for substitution or synthesis. The author discusses applications to biologically active molecules without side effects, including antineoplastic drugs. Additionally, he demonstrates model compounds and the applications of SYNPROPS' optimization and substitution. This book has everything you need to know about deriving properties and combinational chemistry from molecular structure.

Eight new chapters have been added and more than twenty have been significantly revised. A

companion website includes the fully searchable text and an image bank.

Columnar Cacti and Their Mutualists Theodore H. Fleming,Alfonso Valiente-Banuet,2021-11-30 Although cacti such as the saguaro and organ pipe have come to define the Sonoran Desert for many people, they represent some 170 species of columnar cacti found in many parts of the Americas. These giant plants are so dominant in some ecosystems that many species of animals rely on them for food and shelter. They are pollinated by bats in central Mexico and Venezuela, by birds and bees in northern Mexico and Peru. This book summarizes our knowledge about the ecology, evolution, and conservation of columnar cacti and their vertebrate mutualists to show that the very survival of these cacti depends on animals who pollinate them and disperse their seeds. Contributors from the United States, Mexico, Venezuela, and Colombia explore aspects of geology and evolution that have forged this relationship, review findings in anatomy and physiology, and discuss recent research in population and community ecology as well as conservation issues. Ranging from the Sonoran Desert to the northern Andes, these studies reflect progress in understanding how abiotic and biotic factors interact to influence the evolution, distribution, and abundance of cacti and mutualists alike. In addition, this book examines the ways in which humans, through the process of domestication, have modified these plants for economic benefit. The contributors also review phylogenetic relationships between cacti and nectar-feeding bats in an effort to understand how bat-plant interactions have influenced the evolution of diversity and ecological specialization of both. Because of the number of migratory pollinators feeding on columnar cacti, the authors make conservation recommendations aimed at preserving fully functional ecosystems in arid portions of the New World tropics and subtropics. Columnar Cacti and Their Mutualists provided a benchmark for both conservation efforts and future research.
