Surveillance State Josh Chin,Liza Lin,2022-09-06 Where is the line between digital utopia and digital police state? Surveillance State tells the gripping, startling, and detailed story of how China's Communist Party is building a new kind of political control: shaping the will of the people through the sophisticated—and often brutal—harnessing of data. It is a story born in Silicon Valley and America's "War on Terror," and now playing out in alarming ways on China's remote Central Asian frontier. As ethnic minorities in a border region strain against Party control, China's leaders have built a dystopian police state that keeps millions under the constant gaze of security forces armed with AI. But across the country in the city of Hangzhou, the government is weaving a digital utopia, where technology helps optimize everything from traffic patterns to food safety to emergency response. Award-winning journalists Josh Chin and Liza Lin take readers on a journey through the new world China is building within its borders, and beyond. Telling harrowing stories of the people and families affected by the Party's ambitions, Surveillance State reveals a future that is already underway—a new society engineered around the power of digital surveillance.

AI Development and the 'Fuzzy Logic' of Chinese Cyber Security and Data Laws Max Parasol,2021-12-16 The book examines the extent to which Chinese cyber and network security laws and policies act as a constraint on the emergence of Chinese entrepreneurialism and innovation. Specifically, how the contradictions and tensions between data localisation laws (as part of Network Sovereignty policies) affect innovation in artificial intelligence (AI). The book surveys the globalised R&D networks, and how the increasing use of open-source platforms by leading Chinese AI firms during 2017–2020, exacerbated the apparent contradiction between Network Sovereignty and Chinese innovation. The drafting of the Cyber Security Law did not anticipate the changing nature of globalised AI innovation. It is argued that the deliberate deployment of what the book refers to as 'fuzzy logic' in drafting the Cyber Security Law allowed regulators to subsequently interpret key terms regarding data in that Law in a fluid and flexible fashion to benefit Chinese innovation.

The Digital Silk Road Jonathan E. Hillman,2021-10-19 An expert on China's global infrastructure expansion provides an urgent look at the battle to connect and control tomorrow's networks. From the ocean floor to outer space, China's Digital Silk Road aims to wire the world and rewrite the global order. Taking readers on a journey inside China's surveillance state, rural America, and Africa's megacities, Jonathan Hillman reveals what China's expanding digital footprint looks like on the ground and explores the economic and strategic consequences of a future in which all routers lead to Beijing. If China becomes the world's chief network operator, it could reap a commercial and strategic windfall, including many advantages currently enjoyed by the United States. It could reshape global flows of data, finance, and communications to reflect its interests. It could possess an

unrivaled understanding of market movements, the deliberations of foreign competitors, and the lives of countless individuals enmeshed in its networks. However, China's digital dominance is not yet assured. Beijing remains vulnerable in several key dimensions, the United States and its allies have an opportunity to offer better alternatives, and the rest of the world has a voice. But winning the battle for tomorrow's networks will require the United States to innovate and take greater risks in emerging markets. Networks create large winners, and this is a contest America cannot afford to lose.

OpenCV 3 Blueprints Joseph Howse,Steven Puttemans,Quan Hua,Utkarsh Sinha,2015-11-10 Expand your knowledge of computer vision by building amazing projects with OpenCV 3 About This Book Build computer vision projects to capture high-quality image data, detect and track objects, process the actions of humans or animals, and much more Discover practical and interesting innovations in computer vision while building atop a mature open-source library, OpenCV 3 Familiarize yourself with multiple approaches and theories wherever critical decisions need to be made Who This Book Is For This book is ideal for you if you aspire to build computer vision systems that are smarter, faster, more complex, and more

practical than the competition. This is an advanced book intended for those who already have some experience in setting up an OpenCV development environment and building applications with OpenCV. You should be comfortable with computer vision concepts, object-oriented programming, graphics programming, IDEs, and the command line. What You Will Learn Select and configure camera systems to see invisible light, fast motion, and distant objects Build a "camera trap", as used by nature photographers, and process photos to create beautiful effects Develop a facial expression recognition system with various feature extraction techniques and machine learning methods Build a panorama Android application using the OpenCV stitching module in C++ with NDK support Optimize your object detection model, make it rotation invariant, and apply scene-specific constraints to make it faster and more robust Create a person identification and registration system based on biometric properties of that person, such as their fingerprint, iris, and face Fuse data from videos and gyroscopes to stabilize videos shot from your mobile phone and create hyperlapse style videos In Detail Computer vision is becoming accessible to a large audience of software developers who can leverage mature libraries such as OpenCV. However, as they move beyond their first experiments in computer vision, developers may struggle to ensure that their solutions are sufficiently well optimized, well trained, robust, and adaptive in real-world conditions. With sufficient knowledge of OpenCV, these developers will have enough confidence to go about creating projects in the field of computer vision. This book will help you tackle increasingly challenging computer vision problems that you may face in your careers. It makes use of OpenCV 3 to work around some interesting projects. Inside these pages, you will find practical and innovative approaches that are battle-tested in the authors' industry experience and research. Each chapter covers the theory and practice of multiple complementary approaches so that you will be able to choose wisely in your future projects. You will also gain insights into the architecture and algorithms that underpin OpenCV's functionality. We begin by taking a critical look at inputs in order to decide which kinds of light, cameras, lenses, and image formats are best suited to a given purpose. We proceed to consider the finer aspects of computational photography as we build an automated camera to assist nature photographers. You will gain a deep understanding of some of the most widely applicable and reliable techniques in object detection, feature selection, tracking, and even biometric recognition. We will also build Android projects in which we explore the complexities of camera motion: first in panoramic image stitching and then in video stabilization. By the end of the book, you will have a much richer understanding of imaging, motion, machine learning, and the architecture of computer vision libraries and applications! Style and approach This book covers a combination of theory and practice. We examine blueprints for specific projects and discuss the principles behind these blueprints, in detail.

China After Covid-19 Alessia Amighini,2021-07-20 The coronavirus pandemic that has rocked China since December 2019 has posed a gruelling test for the resilience of the country's national economy. Now, as China emerges from its Covid-induced "recession", it feels like the worst is behind it. How did China manage to come out almost unscathed from the worst crisis in over a century?This Report examines how China designed and implemented its post-Covid recovery strategy, focussing on both the internal and external challenges the country had to face over the short- and medium-run.The book offers a comprehensive argument suggesting that, despite China having lost economic and political capital during the crisis, Beijing seems to have been strengthened by the "pandemic test", thus becoming an even more challenging "partner, competitor and rival" for Western countries.

The Emperor's New Road Jonathan E. Hillman,2020-09-29 A prominent authority on China's Belt and Road Initiative reveals the global risks lurking within Beijing's project of the century China's Belt and Road Initiative is the world's most ambitious and misunderstood geoeconomic vision. To carry out President Xi Jinping's flagship foreign-policy effort, China promises to spend over one trillion dollars for new ports, railways, fiber-optic cables, power plants, and other connections. The plan touches more than one hundred and thirty countries and has expanded into the Arctic, cyberspace, and even outer space. Beijing says that it is promoting global development, but Washington warns that it is charting a path to global dominance. Taking readers on a journey to China's projects in Asia, Europe, and Africa, Jonathan E. Hillman reveals how this grand vision is unfolding. As China pushes beyond its borders and deep into dangerous territory, it is repeating the mistakes of the great powers that came before it, Hillman argues. If China succeeds, it will remake the world and place itself at the center of everything. But Xi may be overreaching: all roads do not yet lead to Beijing.

Face Recognition Harry Wechsler,Jonathon P. Phillips,Vicki Bruce,Francoise Fogelman Soulie,Thomas S. Huang,2012-12-06 The NATO Advanced Study Institute (ASI) on Face Recognition: From Theory to Applications took place in Stirling, Scotland, UK, from June 23 through July 4, 1997. The meeting brought together 95 participants (including 18 invited lecturers) from 22 countries. The lecturers are leading researchers from academia, government, and industry from allover the world. The lecturers presented an encompassing view of face recognition, and identified trends for future developments and the means for implementing robust face recognition systems. The scientific programme consisted of invited lectures, three panels, and (oral and poster) presentations from students attending the AS!. As a result of lively interactions between the participants, the following topics emerged as major themes of the meeting: (i) human processing of face recognition and its relevance to forensic systems, (ii) face coding, (iii) connectionist methods and support vector machines (SVM), (iv) hybrid methods for face recognition, and (v) predictive learning and performance evaluation. The goals of the panels were to provide links among the lectures and to emphasis the themes of the meeting. The topics of the panels were: (i) How the human visual system processes faces, (ii) Issues in applying face recognition: data bases, evaluation and systems, and (iii) Classification issues involved in face recognition. The presentations made by students gave them an opportunity to receive feedback from the invited

lecturers and suggestions for future work.

New Laws of Robotics Frank Pasquale,2020-10-27 AI is poised to disrupt our work and our lives. We can harness these technologies rather than fall captive to them—but only through wise regulation. Too many CEOs tell a simple story about the future of work: if a machine can do what you do, your job will be automated. They envision everyone from doctors to soldiers rendered superfluous by ever-more-powerful AI. They offer stark alternatives: make robots or be replaced by them. Another story is possible. In virtually every walk of life, robotic systems can make labor more valuable, not less. Frank Pasquale tells the story of nurses, teachers, designers, and others who partner with technologists, rather than meekly serving as data sources for their computerized replacements. This cooperation reveals the kind of technological advance that could bring us all better health care, education, and more, while maintaining meaningful work. These partnerships also show how law and regulation can promote prosperity for all, rather than a zero-sum race of humans against machines. How far should AI be entrusted to assume tasks once performed by humans? What is gained and lost when it does? What is the optimal mix of robotic and human interaction? New Laws of Robotics makes the case that policymakers must not allow corporations or engineers to answer these questions alone. The kind of automation we get—and who it benefits—will depend on myriad small decisions about how to develop AI. Pasquale proposes ways to democratize that decision making, rather than centralize it in

unaccountable firms. Sober yet optimistic, New Laws of Robotics offers an inspiring vision of technological progress, in which human capacities and expertise are the irreplaceable center of an inclusive economy.

Terror Capitalism Darren Byler,2021-11-02 In Terror Capitalism anthropologist Darren Byler theorizes the contemporary Chinese colonization of the Uyghur Muslim minority group in the northwest autonomous region of Xinjiang. He shows that the mass detention of over one million Uyghurs in "reeducation camps" is part of processes of resource extraction in Uyghur lands that have led to what he calls terror capitalism—a configuration of ethnoracialization, surveillance, and mass detention that in this case promotes settler colonialism. Drawing on ethnographic fieldwork in the regional capital Ürümchi, Byler shows how media infrastructures, the state's enforcement of "Chinese" cultural values, and the influx of Han Chinese settlers contribute to Uyghur dispossession and their expulsion from the city. He particularly attends to the experiences of young Uyghur men—who are the primary target of state violence—and how they develop masculinities and homosocial friendships to protect themselves against gendered, ethnoracial, and economic violence. By tracing the political and economic stakes of Uyghur colonization, Byler demonstrates that state-directed capitalist dispossession is coconstructed with a colonial relation of domination.
