*Elisions* Gregory Morrison,2011-10-12 Caleb's mother dies suddenly from brain cancer, While mourning the loss of his much loved mother he begins to suffer vivid, terrifying dreams. Worse, when he wakes, he finds himself scraped, bruised, and bleeding from the frightening experiences in his dream world. During the nightmare, Caleb receives a mysterious message that says he must find Elise Sullivan-Magaskawa, a young woman in serious trouble who lives in Devils Lake, North Dakota. Caleb knows he'll be dead if he goes back to sleep, so he skips his high school final exams. He finds Elise and learns she's running away from an abusive stepfather and his psychologist friend who want to keep her silence by admitting her into a mental institution. After escaping with Elise, Caleb's dreams ensue, causing severe burns to Caleb's body while specific directions to locate and unite with Derrick are received. The clock is ticking on Caleb's survival, but he's given relief and the most extraordinary love imaginable from Aubrey. They're embroiled in a race to locate their final group member and to attempt to discover the reason they've been brought together. Throughout the journey this unlikely band of teens with a rape victim, drug dealer, isolated mama's boy, prom queen and a schizophrenic must each battle his/her own demons, mentally as well as physically, which takes every ounce of their special abilities to overcome. Their religions are challenged, racial barriers crossed, self-images shattered as they embark upon alternate perceptions of life and death as well as alternate energy sources that just might save mankind and our planet Earth.

*Large Turbo-Generators* Isidor Kerszenbaum,Geoff Klempner,2016-09-15 This book presents a comprehensive, ordered relationship between malfunctions and symptoms occurring in large turbogenerators. With this book, the operator and/or engineer in a generating station could identify underlying causes of a developing component degradation or a failure quicker, which could potentially save both time and money and reduce the trial-and-error troubleshooting process. Large turbogenerators are the most important source of electricity. They can be found in thousands of power stations in every country. Forced outages, failures and degradation of these very expensive machines have an enormous aggregate cost to society. As such, any tool that can ameliorate loss of production by shaving time from troubleshooting activities, and avoiding unnecessary costs by detecting and promptly responding to component degradation, represents a step forward.

*Heatshield Inventor* Kerry Young,2015-09-02 In the late 1950's NACA and the Department of Defense had a problem. They could not figure out how to make a heat shield for manned spacecraft or ICBMs. The Air Force used heat-sink metals, especially copper and the Navy, on *Polaris*, used a beryllium heat sink shield. The Space Task Group, in March, 1958, were leaning toward the heat sink method. The Huntsville, Alabama museum for the tested nose cones all show pointed, refractory types. Then Dr. Nininger, a renowned meteoriticist, revealed to NASA's Julian Allen that meteors that land successfully are blunt and pitted. Allen claimed this discovery. Then an unknown potato peeler inventor, Everett Young, disclosed his patented invention for manned reentry to earth. It used a sandwiched cellular construction with permeable substrate, differential ablation and a vacuum gap. NASA copied his ideas and used them on *Gemini*, *Apollo*, and now *Constellation* spacecraft heat shields. Young's family suffered severely as a result of NASA's disregard for the real heat shield inventor and the job promised him.

*Lightbreaker* Mark Teppo,2016-03-29 A troubled occultist-sorcerer confronts a gritty Seattle underbelly in this dark and unique urban fantasy.

Markham has returned to Seattle searching for Katarina, the girl who, a decade ago, quite literally tore his soul from his body. What he discovers instead is dark magick of an ancient and destructive kind. His encounter with a desperate spirit leaping from host to host sets Markham on the trail of a secretive cabal of magicians whose past is strangely linked to his own. Armed with the Chorus, a phantasmal chain of human souls which he wields as a weapon of will, Markham must engage in a magickal battle whose stakes prove to be earth shatteringly high. From Mark Teppo comes an explosive, action-packed occult thriller combining Western magick, Hermetic traditions, and shamanism. Advances in Nuclear Science and Technology E. Henley,2013-04-17 The editors are pleased to present to the nuclear community our new-look annual review. In its new look, with Plenum our new publisher, we may hope for a more rapid presentation to our audience of the contents for their consideration; the contents themselves, however, are motivated from the same spirit as the first nine volumes, reviews of important developments in both a historical and an anticipatory vein, interspersed with occasional new contributions that seem to the editors to have more than ephemeral interest. In this volume the articles are representative of the editorial board policy of covering a range of pertinent topics from abstract theory to practice and include reviews of both sorts with a spicing of something new. Conn's review of a conceptual design of a fusion reactor is timely in bringing to the attention of the general nuclear community what is perhaps well known to those working in fusion - that practical fusion reactors are going to require much skillful and complex engineering to make the bright hopes of fusion as the inexhaustible energy source bear fruit. Werner's review of numerical solutions for fission reactor kinetics, while not exactly backward looking, is at least directed to what is now a well established, almost conventional field. Fabric's summary of the current loss-of-coolant accident codes is one realisation of the intensity of effort that enables us to call a light water reactor 'conventional'.
