Access Controlled Ronald Deibert, John Palfrey, Rafal Rohozinski, Jonathan Zittrain, 2010-04-02 Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. *Access Controlled* reports on this new normative terrain. The book, a project from the OpenNet Initiative (ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods.

The chapters in this volume provide case studies that span an array of geographies as they debate questions regarding conceptual issues in cyberspace and the relationship between politics, cyberterrorism and cyber-activism, as well as state and international regulations concerning cyberspace, resistance movements in cyberspace, and media frameworks concerning terrorism, civil liberties, and government restrictions. Online around the World Laura M. Steckman, Marilyn J. Andrews, 2017-05-24 Covering more than 80 countries around the world, this book provides a compelling, contemporary snapshot of how people in other countries are using the Internet, social media, and mobile apps. How do people in other countries use the social media platform Facebook differently than Americans do? What topics are discussed on the largest online forum—one in Indonesia, with more than seven million registered users? Why does Mongolia rate in the top-ten countries worldwide for peak Internet speeds? Readers of *Online around the World: A Geographic Encyclopedia of the Internet, Social Media, and Mobile Apps* will discover the answers to these questions and learn about people's Internet and social media preferences on six continents—outside of the online community of users within the United States. The book begins with an overview of the Internet, social media platforms, and mobile apps that chronologically examines the development of technological innovations that have made the Internet what it is today. The country-specific entries that follow the overview provide demographic information and describe specific events influenced by online communications, allowing readers to better appreciate the incredible power of online interactions across otherwise-unconnected individuals and the realities and peculiarities of how people communicate in today's fast-paced, globalized, and high-technology environment. This encyclopedia presents social media and the Internet in new light, identifying how the use of language and the specific application of human culture impacts emerging technologies and communications, dramatically affecting everything from politics to social activism, education, and censorship.
