Assuming little previous knowledge of the standard, or of systems networking, the book identifies the challenges and significance of the standard, examines the business and market drivers and presents decision makers with a clear, concise and jargon free read. *Bicycles in American Highway Planning* Bruce D. Epperson,2014-11-25 The United States differs from other developed nations in the extent to which its national bicycle transportation policy relies on the use of unmodified roadways, with cyclists obeying the same traffic regulations as motor vehicles. This policy—known as “vehicular cycling”—evolved between 1969, when the “10-speed boom” saw a sharp increase in adult bicycling, and 1991, when the American Association of State Highway and Transportation Officials adopted an official policy that on-road bikeways were not desirable. This policy resulted from a growing realization by highway engineers and experienced club cyclists that they had parallel interests: the cyclists preferred to ride on highways, because most bikeways were not designed for high speeds and pack riding; and the highway engineers did not want to divert funding from roadways to construct bikeways. Using contemporary magazine articles, government reports, and archival material from industry lobbying groups and national cycling organizations, this book tells the story of how America became a nation of bicyclists without bikeways.

Optimising Business Performance with Standard Software Systems Heinz-Dieter Knöll,Lukas W. H. Kühl,Roland W. A. Kühl,Robert Moreton,2013-12-01 This book is addressed at decision makers, project teams, project managers, company's IT-managers, and staff of consulting companies, who are either involved in complex standard software implementation, or release migration projects. The book stresses the shortcomings of many present standard software implementations which mainly pertain to insufficiently optimised business processes, thus standard software has caused a lot of dissatisfied companies. The authors analyse certain popular implementation approaches (life-cycle-models) of different Standard Software suppliers. It shows how a new semi-process oriented way of implementing modern standard software systems may contribute to a better business performance.
