**Why Popcorn Costs So Much at the Movies** Richard B. McKenzie, 2008-04-17 This entertaining book seeks to unravel an array of pricing puzzles from the one captured in the book's title to why so many prices end with 9 (as in \$2.99 or \$179). Along the way, the author explains how the 9/11 terrorists have, through the effects of their heinous acts on the relative prices of various modes of travel, killed more Americans since 9/11 than they killed that fateful day. He also explains how well-meaning efforts to spur the use of alternative, supposedly environmentally friendly fuels have starved millions of people around the world and given rise to the deforestation of rainforests in Malaysia and Indonesia.

**Modelling Engine Sheds and Motive Power Depots of the Steam Era** Terry Booker, 2016-02-29 Many railway modellers include an engine shed somewhere on their layout. However, all too often the shed is squeezed into a quite improbable location and is little more than a place to 'park' engines when they are not in use. This well-illustrated and comprehensive book, written by an experienced railway modeller, helps even the beginner to develop a far more realistic approach and to capture the unforgettable grimy but exciting atmosphere of the locomotive shed in the steam era. The book covers all types of engine shed from the branch line sub-shed to the main line motive power depot, and discusses research, planning, the building process, readily available materials and simple tools. It goes on to explain how to obtain

the very best from kits, how to site and operate sheds, and how to make them look authentic. It demonstrates the construction of over a dozen kits, including off-the-shelf kits and the newest computer downloadable kits, and shows the modeller how to create special dioramas depicting the whole shed scene and how to scratch-build complete sheds, including coal stages and other infrastructure. With further advice for those with a limited amount of space, and 'top tips' throughout, this is essential reading for modellers of all abilities who wish to incorporate a realistic locomotive shed of the steam era into their layout. Well illustrated with 323 colour photographs.

**The Change Function** Pip Coburn,2006-06-22 The ultimate guide to predicting winners and losers in high technology Pip Coburn became famous for

writing some of the liveliest reports on Wall Street. He quoted everyone from Machiavelli to HAL, Anaïs Nin to Yoda, Einstein to Gandhi. But along with the quirky writing, he consistently delivered sharp insights into technology trends and helped investors pick stocks with long-term potential. After years of studying countless winners and losers, Coburn has come up with a simple idea that explains why some technologies become huge hits (iPods, DVD players, Netflix), but others never reach more than a tiny audience (Segways, video phones, tablet PCs). He says that people are only willing to change when the pain of their current situation outweighs the perceived pain of trying something new. In other words, technology demands a change in habits, and that's the leading cause of failure for countless cool inventions. Too many tech companies believe in build it and they will come— build something better and people will beat a path to your door. But, as Coburn shows, most potential users are afraid of new technologies, and they need a really great reason to change. The Change Function is an irreverent look at how this pattern plays out in countless sectors, from computers to cell phones to digital TV recorders. It will be an invaluable book for people who create and invest in new technologies.

**Vestibular System Part 1: Basic Mechanisms** H.H. Kornhuber, 2012-12-06 The details of the receptor mechanism are not yet fully understood for any sensory system. However, sufficient data are available (for the vestibular system and for other systems) to permit meaningful tracking of the sensory messages through the nervous system and via conscious experience. The reception, processing, storage and output of information in man and other animals, as done by means of receptors, neurons, secretory cells and muscle fibers, are collectively referred to as mind. Sensory physiologists tend to disbelieve in extrasensory perception. Sensory physiology in general is an area upon which different sciences and methods converge. Anatomists, physiologists, psychologists, physicists, chemists, and engineers

have made important contributions to sensory physiology. What is special about vestibular physiology is the fact that many research workers are clinicians, living under the constant pressure of their patient's demands. This is a disadvantage when it comes to writing handbooks, but an advantage for the patient, since research is guided by clinical practice and can be quickly applied. Modern methods, such as recording from single nerve units and the correlation of electrophysiological and psychophysical data, have greatly contributed to our knowledge, yet the study of lesions is still important, especially in the vestibular field.
