Informatics in Medical Imaging George C. Kagadis, Steve G. Langer, 2011-10-17
Informatics in Medical Imaging provides a comprehensive survey of the field of medical imaging informatics. In addition to radiology, it also addresses other specialties such as pathology, cardiology, dermatology, and surgery, which have adopted the use of digital images. The book discusses basic imaging informatics protocols, picture archiving and communication systems, and the electronic medical record. It details key instrumentation and data mining technologies used in medical imaging informatics as well as practical operational issues, such as procurement, maintenance, teleradiology, and ethics. Highlights Introduces the basic ideas of imaging informatics, the terms used, and how data are represented and transmitted Emphasizes the fundamental communication paradigms: HL7, DICOM, and IHE Describes information systems that are typically used within imaging departments: orders and result systems, acquisition systems, reporting systems, archives, and information-display systems Outlines the principal components of modern computing, networks, and storage systems Covers the technology and principles of display and acquisition detectors, and rounds out with a discussion of other key computer technologies Discusses procurement and maintenance issues; ethics and its relationship to government initiatives like HIPAA; and constructs beyond radiology The technologies of medical imaging and radiation therapy are so complex and computer-driven that it is difficult for physicians and technologists responsible for their clinical use to know exactly what is happening at the point of care. Medical physicists are best equipped to understand the technologies and their applications, and these individuals are assuming greater responsibilities in the clinical arena to ensure that intended care is delivered in a safe and effective manner. Built on a foundation of classic and cutting-edge research, Informatics in Medical Imaging supports and updates medical physicists functioning at the intersection of radiology and radiation.

Grieving Beyond Gender Kenneth J. Doka, Terry L. Martin, 2011-01-19 *Grieving Beyond Gender: Understanding the Ways Men and Women Mourn* is a revision of *Men Don't Cry, Women Do: Transcending Gender Stereotypes of Grief*. In this work, Doka and Martin elaborate on their conceptual model of styles or patterns of grieving - a model that has generated both research and acceptance since the publication of the first edition in 1999. In that book, as well as in this revision, Doka and Martin explore the different ways that individuals grieve, noting that gender is only one factor that affects an individual's style or pattern of grief. The book differentiates intuitive grievers, where the pattern is more affective, from instrumental grievers, who grieve in a more cognitive and behavioral way, while noting other patterns that might be more blended or dissonant. The model is firmly grounded in social science theory and research. A particular strength of the work is the emphasis placed on the clinical implications of the model on the ways that different types of grievers might best be supported through individual counseling or group support.

Men Don't Cry, Women Do Kenneth J. Doka, Terry L. Martin, 2014-03-05 Do men and women grieve differently? This text, while emphasizing that there are many ways to cope with grief, offers a refreshing change from the popular gender stereotypes of grief. Two patterns of grieving are described: an intuitive pattern where individuals experience and express grief in an affective way (stereotyped as female); and an instrumental pattern where grief is expressed physically or cognitively (stereotyped as male). A third pattern representing a blending of these two is also introduced. Of critical importance is that such patterns are related to, but not determined by, gender; and each has distinct strengths and weaknesses. Organized into three main parts, this topical new text begins by defining terms, introducing and delineating the grief patterns, and rooting the book's concept in contemporary theories of grief. The second part speculates on factors that may influence individuals' patterns of coping with loss (e.g., personality, gender, culture, etc.). The final part considers implications and therapeutic interventions likely to be effective with different types of grievers.

Following the successes of the First KES Symposium on Agent and Multi-agent Systems - Technologies and Applications (KES-AMSTA 2007), held in Wroclaw, Poland, from May 31 to 1 June 2007--and the Second KES Symposium on Agent and Multi-agent Systems - Technologies and Applications (KES-AMSTA 2008) held in Incheon, Korea, March 26-28, 2008--KES-AMSTA 2009 featured keynote talks, oral and poster presentations, and a number of workshops and invited sessions, closely aligned to the themes of the conference. The aim of the symposium was to provide an international forum for scientific - search into the technologies and applications of agent and multi-agent systems. Agent and multi-agent systems are an innovative type of modern software system and have long been recognized as a promising technology for constructing autonomous, complex and intelligent systems. A key development in the field of agent and multi-agent systems has been the specification of agent communication languages and formalization of ontologies. Agent communication languages are intended to provide standard declarative mechanisms for agents to communicate knowledge and make requests of each other, whereas ontologies are intended for conceptualization of the knowledge domain.
