Cet,Alan Kent,2006 Just like today, with high-specification
computers being used to design even higher specification models
for the next generation, the making of machines to make
machines was one of the most important aspects of the Industrial
Revolution. The lathe, for example, is the oldest known machine
tool and dates back to antiquity, but it wasn't until the late 17th
century that such industries as clock making, the building of
scientific instruments, furniture and gun makers, began to convert
from woodworking lathes to ones that were capable of machining
metal. Craftsmen needed precise machines that could shape metal
gears, cut metal screws and stamp shapes out of metal, thus
enabling others to assemble their products.
