Modeling and Optimization of LCD Optical

Performance Dmitry A. Yakovlev, Vladimir G.

Chigrinov, Hoi-Sing Kwok, 2015-02-05 Focusing on polarization matrix optics in many forms, this book includes coverage of a wide range of methods which have been applied to LCD modeling, ranging from the simple Jones matrix method to elaborate and high accuracy algorithms suitable for off-axis optics. Researchers and scientists are constantly striving for improved performance, faster response times, wide viewing angles, improved colour in liquid crystal display development, and with this comes the need to model LCD devices effectively. The authors have significant experience in dealing with the problems related to the practical application of liquid crystals, in particular their optical performance. Key features: Explores analytical solutions and approximations to important cases in the matrix treatment of different LC layer configurations, and the application of these results to improve the computational method Provides the analysis of accuracies of the different approaches discussed in the book Explains the development of the Eigenwave Jones matrix method which offers a path to improved accuracy compared to Jones matrix and extended Jones matrix formalisms, while achieving significant improvement in computational speed and versatility compared to full 4x4 matrix methods Includes a companion website hosting the authors' program library LMOPTICS (FORTRAN 90), a collection of routines for calculating the optical characteristics of stratified media, the use of which allows for the easy implementation of the methods described in this book. The website also contains a set of sample programs (source codes) using LMOPTICS, which exemplify the application of these methods in different situations

Interactive Systems for Experimental Applied

Mathematics Melvin Klerer, 2012-12-02 Interactive Systems for Experimental Applied Mathematics is a collection of papers presented at the 1967 Association for Computing Machinery (ACM) Inc. Symposium on Interactive Systems for Experimental Mathematics, held in Washington, D.C. in conjunction with the ACM National Meeting. This book is organized into five parts encompassing 46 chapters. The opening part deals with the general criteria for interactive on-line systems that seem most important for the experimental solution of mathematical problems. This part specifically describes the AMTRAN, REDUCE, EASL, POSE, VENUS, and CHARYBDIS computer systems and languages. The next two parts cover the components of interactive systems, including coherent programming, interactive console, mathematical symbol processing, message system, and computer-aided instruction. The fourth part examines a scheme for permitting a user of conventional procedural programming languages, namely, FORTRAN, to test actual error propagation in numerical calculations. This part also describes the features of Analyst Assistance Program, an on-line graphically oriented conversational computing system designed to perform small nonrecurring numerical computations. The concluding part presents several implications of selected computer systems, the resulting problems, and their proposed solutions. This book is of great benefit to computer scientists and engineers, mathematicians, and undergraduate and graduate students in applied mathematics.

Transactions on Edutainment IV Xiaopeng Zhang, 2010-08-28 E-learning and digital entertainment techniques, tools and systems are becoming popular and can be found in many real-world educational applications in many countries. The driving force behind these technologies is the

rapidly growing requirements of edutainment, especially from the perspective of the users. This has led to the increasing interest of researchers in this area. The articles in this issue give a rich overview of how edutainment technologies can be creatively used for training and education purposes. The first 12 articles of this issue represent a selection of outstanding contributions from Edutainment 2010, the 5th International Conference on E-learning and Games, held in Changchun, China, in August 2010. The main purpose of this event is to facilitate the discussion, presentation, and information exchange on the scientific and technological developments in the emerging field of digital entertainment techniques and systems for education. These 12 papers concentrated on three aspects: e-learning systems and applications, game techniques for learning, and virtual reality techniques for entertainment. They are closely related to the topics of this journal.

Secrets of Screen Acting Patrick

Tucker, 2014-11-13 When it was first published in 1993, *Secrets of Screen Acting* broke new ground in explaining how acting for the camera is different from acting on stage. Reaction time is altered, physical timing and placement are reconceived, and the proportions of the digital frame itself become the measure of all things, so the director must conceptualize each image in terms of this new rectangle and actors must 'fit' into the frame. Based on a revolutionary non-Method approach to acting, this book shows what actually works: how an actor, an announcer--anyone working in front of the cameras--gives excellent performances on screen. Instead of starting with what is real and trying to wrestle that onto the screen, Patrick Tucker explains how to work with the realities of a shoot and work from there towards the real. His step-by-step guide to the elements of effective screen acting is an extension and explanation of a lifetime of work in the field, containing over 50 acting exercises and the tried-and-tested Screen Acting Checklist. As well as being completely updated to cover new techniques, film references and insights, this third edition now includes a set of Film Clip Time Codes for each film. These not only itemise the films discussed in each chapter, but also pinpoint the precise moments where each example can be found so that students, teachers, and professional actors can refer to them quickly and easily.

Coping Systems for Employee Turnover Sebastian Reiche, 2003-02-03 Inhaltsangabe: Abstract: As

business activities become increasingly global and cross-nationally intertwined, human resource management is no longer defined by national boundaries. In particular, multinational corporations (MNCs) face the challenge of managing their globally dispersed work force effectively. Yet, the field of international human resource management (IHRM) remains an understudied domain, lacking substantial empirical and conceptual research. Also, a prevailing focus on quantitative data suggests a need for deeper qualitative investigations, which allows a more profound assessment of the context in which IHRM unfolds. By addressing IHRM at MNCs, the current empirical work contributes additional scientific insights into this domain. In this respect, the author has selected an approach of inductive comparative case study research, mainly based on qualitative data, that enables the generation of theory through an iterative, data-driven process. This method has been applied to investigate IHRM because it is particularly fruitful when examining new and narrowly developed scientific fields as well as considering contextual conditions. Thus, a multiple case study was conducted through exploratory and semi-structured interviews with managerial employees at six western MNCs which maintain their regional headquarters for South-East Asia in Singapore. The initial guiding objective was to provide a more thorough understanding of the forces that influence IHRM. Due to the exploratory nature of the research set-up, this broad focus has narrowed during the conduct of the study and the subsequent data analysis. Based on the interviews, employee turnover emerged as a key concern for international organizations operating in Singapore. Although a tight local labour market has led to the effect that job turnover is a widespread phenomenon, there is a lack of research

addressing this issue and the resulting implications for foreign MNCs. The present study's focus on employee turnover also takes into account the growing importance of local staff for MNCs. Indeed, by acknowledging the critical role that local nationals play at the host country level, it will be increasingly imperative for international organizations to establish effective retention strategies. Despite this obvious significance, the field of managing employee turnover also remains considerably underdeveloped. Building on the results of the conducted multiple case study, the purpose of [...]

Implementing Document Imaging and Capture Solutions with IBM Datacap Whei-Jen Chen, Ben Antin, Kevin Bowe, Ben Davies, Jan den Hartog, Daniel Ouimet, Tom Stuart, IBM Redbooks, 2015-10-27 Organizations face many challenges in managing ever-increasing documents that they need to

conduct their businesses. IBM® content management and imaging solutions can capture, store, manage, integrate, and deliver various forms of content throughout an enterprise. These tools can help reduce costs associated with content management and help organizations deliver improved customer service. The advanced document capture capabilities are provided through IBM Datacap software. This IBM Redbooks® publication focuses on Datacap components, system architecture, functions, and capabilities. It explains how Datacap works, how to design a document image capture solution, and how to implement the solution using Datacap Developer Tools, such as Datacap FastDoc (Admin). FastDoc is the development tool that designers use to create rules and rule sets, configure a document hierarchy and task profiles, and set up a verification panel for image verification. A loan application example explains the advanced technologies of IBM Datacap Version 9. This scenario shows how to develop a versatile capture solution that is able to handle both structured and unstructured documents. Information about high availability, scalability, performance, backup and recovery options, preferable practices, and suggestions for designing and implementing an imaging solution is also included. This book is intended for IT architects and professionals who are responsible for creating, improving, designing, and implementing document imaging solutions for their organizations.

StarBriefs 2001 ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on. Yet nobody would wonder at someone taking a short walk every day - after twenty five years that person would have covered a surprisingly long distance. This is exactly the story behind this list, which appeared first as a few pages within the directory

StarGuides (or whatever name it had at that time) and as a distinct sister publication since 1990. The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations, acronyms, contractions and symbols which they might encounter in all aspects of the vast range of their professional activities, including traveling. Perhaps it is a bit paradoxical, but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline, they will probably encounter more difficulties when dealing with adjacent fields. It is for this purpose that this dictionary might be most often used. Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions.

Mapping the implementation process for subsidized fertilizer distribution under Ghana's Planting for Food and Jobs Program Aberman, Noora-Lisa, Kufoalor, Doreen S., Gilbert, Rachel, 2021-06-09 Planting for Food and Jobs (PFJ) is Ghana's flagship program for agricultural transformation and employment creation. Alongside other components, the program provides subsidized fertilizer, hybrid and open-pollinated seeds and other planting materials, improved extension services, and marketing support to smallholder farmers across the country. The objective of this study was to assess the implementation process of the PFJ input subsidy program in order to identify opportunities for strengthening the process. The study focused only on fertilizer distribution as a distinct complex process of importance, although some of the lessons will be applicable to other components of the PFJ program. The study applied the Process Net-Map method, a research approach that is particularly useful for assessing the coherence between formally prescribed procedures

and how those procedures are implemented in practice, enabling the identification of inefficiencies and bottlenecks in a complex process. The implementation of the PFJ fertilizer subsidy program was mapped in interviews with key informants at national level and in six districts. Interviews with national-level stakeholders yielded important insights about the complex largely administrative process involved in the implementation of PFJ, which is generally unseen by beneficiaries. These administrative processes, however, have a considerable impact on the timeliness of the program and provide an outline of the intended implementation process at the local district level. The perspectives of farmers with regards to these processes were also investigated through in-depth interviews. Across the study districts we found some ambiguity and inconsistency in following the formally prescribed procedures for implementing the PFJ fertilizer subsidy program. While we found broad agreement among key informants and farmers that the program is meeting its objectives, some areas in which the implementation process for the PFJ fertilizer subsidy program could be improved are highlighted. These improvements will enhance the efficiency and impact of the program.
