**Designing Service Processes to Unlock Value, Third Edition** Joy M. Field, 2020-12-16 Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also by providing information to the service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value co-creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing number of alternatives for designing service processes and determining who performs the various service tasks, service performance outcomes are increasingly dependent on the knowledge, skills, and abilities—that is, capabilities—of both service providers and customers. Thus, the book concludes with approaches to unlock these capabilities—and further boost value co-creation.

*Management Enabling the Future Internet for Changing Business and New Computing Services* Choong Seon Hong, Toshio Tonouchi, Yan Ma, Chi-Shih Chao, 2009-09-19 We are delighted to present the proceedings of the 12th Asia-Pacific Network Operations and Management Symposium (APNOMS 2009), which was held in Jeju, Korea, during September 23-25, 2009. Recently, various convergences in wired and wireless networks, and convergence of telecommunications and broadcastings, are taking place for ubiquitous multimedia service provisioning. For example, broadband IP/MPLS wired networks are actively converged with IEEE 802.11e wireless LAN, IEEE 802.16 Wireless MAN, 3G/4G wireless cellular networks, and direct multimedia broadcast (DMB) networks. For efficient support of service provisioning for ubiquitous multimedia services on the broadband convergence networks, well-designed and implemented network operations and management functions with QoS guaranteed traffic engineering are essential. The converged network will open the way for a new world with emerging new businesses and computing services. The Organizing Committee (OC) selected "Management Enabling the Future Internet for Changing Business and New Computing Services" as the timely theme of APNOMS 2009. Contributions from academia, industry and research institutions met these challenges with 173 paper submissions, from which 41 high-quality papers (23.7% of the submissions) were selected for technical sessions as full papers, and 32 papers were selected as short papers. In addition, we had nine papers in innovation sessions for on-going research. Diverse topics were covered, including Traffic Trace Engineering, Configuration and Fault Management, Management of IP-Based Networks, Autonomous and Distributed Control, Sensor Network and P2P Management, Converged Networks and Traffic Engineering, SLA and QoS Management, Active and Security Management, Wireless and Mobile Network Management, and Security Management.

*Inescapable Data* Chris Stakutis, John Webster, 2005 An intense look at the deep impact of communications, computing, and data storage convergence on society, government, and the individual. Rich with solid analysis and supported by insightful interviews with industry leaders, this book will provide a mapping of Pervasive Data to the future of information management and flow.
