## **Diskurs der Daten** Pamela Steen, Frank

Liedtke, 2019-03-04 Der Forschungsbereich der Digitalen Daten ist in den qualitativ arbeitenden

Geisteswissenschaften bislang kaum erschlossen. Unter dem populären Schlagwort Big Data versammeln sich jedoch derzeit neue und allumfassende Formen der Kommunikation in Gestalt der Nutzung und des Austauschs elektronischer Daten, die räumlich als Erweiterung des eigenen Aktionsradius, zeitlich als Beschleunigung von Such- und Kommunikationsvorgängen erlebt werden. Die Beiträge in diesem Band analysieren einerseits „semantische Kämpfe“ (Felder 2006) zum Thema Digitale Massendaten auf der sprachlichen Meta-Ebene, indem sie z.B. Ideologien enthüllen, die bei der kommunikativen Aneignung des Digitalen entstehen. In den Dialog treten diese Ansätze andererseits mit solchen, die untersuchen, wie User/-innen der digitalen Medien (Twitter, Kommentarforen) in actu mit dem Digitalen umgehen. Ergänzend dazu werden theoretische Reflexionen angestoßen, die die vielfältigen Zusammenhänge der digitalen Massendaten mit den Begriffen der Macht, des Subjekts und der Programmierung, der Selbstbestimmung und der Algorithmisierung, des Erkenntnispotenzials und des potenziellen Nichtwissens betreffen. Vor allem aufgrund der Methodenvielfalt der Beiträge kann dieser Sammelband somit als qualitativer Brückenschlag der ‚traditionellen‘ Geisteswissenschaften in das neue Forschungsfeld der Digital Humanities verstanden werden.

**Electronic Commerce 2018** Efraim Turban, Jon Outland, David King, Jae Kyu Lee, Ting-Peng Liang, Deborah

C. Turban, 2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

*Concepts, Techniques, and Models of Computer Programming* Peter Van Roy, Seif Haridi, 2004-02-20

Teaching the science and the technology of programming as a unified discipline that shows the deep relationships between programming paradigms. This innovative text presents computer programming as a unified discipline in a way that is both practical and scientifically sound. The book focuses on techniques of lasting value and explains them precisely in terms of a simple abstract machine. The book presents all major programming paradigms in a uniform framework that shows their deep relationships and how and where to use them together. After an introduction to programming concepts, the book presents both well-known and lesser-known computation models (programming paradigms). Each model has its own set of techniques and each is included on the basis of its usefulness in practice. The general models include declarative programming, declarative concurrency, message-passing concurrency, explicit state, object-oriented programming, shared-state concurrency, and relational programming. Specialized models include graphical user interface programming, distributed programming, and constraint programming. Each model is based on its kernel language—a simple core language that consists of a small number of programmer-significant elements. The kernel languages are introduced progressively, adding concepts one by one, thus showing the deep relationships between different models. The kernel languages are defined precisely in terms of a simple abstract machine. Because a wide variety of languages and programming paradigms can be modeled by a small set of closely related kernel languages, this approach allows programmer and student to grasp the underlying unity of programming. The book has many program fragments and

exercises, all of which can be run on the Mozart Programming System, an Open Source software package that features an interactive incremental development environment.
