Differences Between the Security Models of Android and IOS Samuel Hopstock, 2019-06-13 Seminar paper from the year 2018 in the subject Computer Science - IT-Security, grade: 1,0, Technical University of Munich, course: Seminar Mobile Application Security, language: English, abstract: Smartphones are being used as the preferred device for as many things as possible in today's world. This is why having secure phones that are resilient against attacks targeting their users' data, becomes more and more important. This paper tries to assess what measures device vendors have taken to ensure those attacks will not be successful. Because the market is mostly divided between Google's Android and Apple's iOS, we put our focus on those two operating systems and compare their respective security models. Additionally this comparison will be evaluating how those models have changed over time since the beginning of the smartphone era around 2010. The last part of this analysis will take a look at a different view on smartphones, the perspective of so-called power users: Those are people that do not only use their smartphone for downloading some apps and surfing the Internet but rather want to do some lower-level customization to the operating system, by rooting their Android device or jailbreaking their iPhone. This process of gaining full privileges on the phone not only creates advantages for the user but can also have rather negative implications on the device's security. How exactly does this affect the protections implemented by the vendor?

Social Media Security Michael Cross, 2013-11-01 Social networks, particularly public ones, have become part of the fabric of how we communicate and collaborate as a society. With value from micro-level personal networking to macro-level outreach, social networking has become pervasive in people's lives and is now becoming a significant driving force in business. These new platforms have provided new approaches to many critical enterprise functions, including identifying, communicating, and gathering feedback with customers (e.g., Facebook, Ning); locating expertise (e.g., LinkedIn); providing new communication platforms (e.g., Twitter); and collaborating with a community, small or large (e.g., wikis). However, many organizations have stayed away from potential benefits of social networks because of the significant risks associated with them. This book will help an organization understand the risks present in social networks and provide a framework covering policy, training and technology to address those concerns and mitigate the risks presented to leverage social media in their organization. The book also acknowledges that many organizations have already exposed themselves to more risk than they think from social networking and offers strategies for dialing it back to retake control. Defines an organization's goals for social networking Presents the risks present in social networking and how to mitigate them Explains how to maintain continuous social networking security

Landscape of Cybersecurity Threats and Forensic Inquiry Joseph O. Esin, 2017-12-23 Cybersecurity threats are not isolated occurrences and must be recognized as global operations requiring collaborative measures to prepare cyber graduates and organizations personnel on the high impact of cybercrimes and the awareness, understanding, and obligation to secure, control, and protect the organizations vital data and information and sharing them on social media sites. Most of my colleagues in the academic world argue in support of the premises of exempting high school students from cybersecurity education. However, utmost academic populations, the one I subscribe to, support the implementation of cybersecurity training sessions across entire academic enterprises, including high school, college, and university educational programs. Collaborative cyber education beginning from high school, college, and university settings will control and eliminate the proliferation of cybersecurity attacks, cyber threats, identity theft, electronic fraud, rapid pace of cyber-attacks, and support job opportunities for aspirants against cybersecurity threats on innocent and vulnerable citizens across the globe.
