World Maps for Finding the Direction and Distance of Mecca David A. King,1999-01-01 The author describes how Muslims over the centuries have determined the sacred direction (qibla) towards Mecca and presents two highly sophisticated Mecca-centred world-maps for finding the qibla. These recently-discovered world-maps have forced a reevaluation of Muslim achievements in mathematics and cartography.

Studies in Medieval Islamic Technology Donald R. Hill,2020-10-07 These studies represent the major contributions to the history of Islamic technology during the second half of the 20th century beside Donald Hill's separate publications on the mechanical devices of Pseudo-Apollonios, the Banu Musa and al-Jazari. A gifted linguist who was trained as a historian of Islamic civilisation, and also a professional engineer, Hill achieved his goal of setting his subject on a solid basis. The papers reprinted here include his early studies of the trebuchet and the camel and horse, several overviews of different aspects of Islamic technology, articles on specific topics such as the Cairo Nilometer and al-Biruni's geared luni-solar device, and the first notice of an extremely important Andalusian treatise on mechanical devices discovered in 1975.

Time in Early Modern Islam Stephen P. Blake,2013-02-11 The prophet Muhammad and the early Islamic community radically redefined the concept of time that they had inherited from earlier religions' beliefs and practices. This new temporal system, based on a lunar calendar and era, was complex and required sophistication and accuracy. From the ninth to the sixteenth centuries, it was the Muslim astronomers of the Ottoman, Safavid and Mughal empires who were responsible for the major advances in mathematics, astronomy and astrology. This fascinating study compares the Islamic concept of time, and its historical and cultural significance, across these three great empires. Each empire, while mindful of earlier models, created a new temporal system, fashioning a new solar calendar and era and a new round of rituals and ceremonies from the cultural resources at hand. This book contributes to our understanding of the Muslim temporal system and our appreciation of the influence of Islamic science on the Western world.

About Time: A History of Civilization in Twelve Clocks David Rooney,2021-08-17 A captivating, surprising history of timekeeping and how it has shaped our world. For thousands of years, people of all cultures have made and used clocks, from the city sundials of ancient Rome to the medieval water clocks of imperial China, hourglasses fomenting revolution in the Middle Ages, the Stock Exchange clock of Amsterdam in 1611, Enlightenment observatories in India, and the high-precision clocks circling the Earth on a fleet of GPS satellites that have been launched since 1978. Clocks have helped us navigate the world and build empires, and have even taken us to the brink of destruction. Elites have used them to wield power, make money, govern citizens, and control lives—and sometimes the people have used them to fight back. Through the stories of twelve clocks, About Time brings pivotal moments from the past vividly to life. Historian and lifelong clock enthusiast David Rooney takes us from the unveiling of al-Jazari's castle clock in 1206, in present-day Turkey; to the Cape of Good Hope observatory at the southern tip of Africa, where nineteenth-century British government astronomers moved the gears of empire with a time ball and a gun; to the burial of a plutonium clock now sealed beneath a public park in Osaka, where it will keep time for 5,000 years. Rooney shows, through these artifacts, how time has been imagined, politicized, and weaponized over the centuries—and how it might bring peace. Ultimately, he writes, the technical history of horology is only the start of the story. A history of clocks is a history of civilization.

Africas Islamic Experiences- History, Culture, and Politics Ali A. Mazrui,Patrick M. Dikirr,Jr. Robert Ostergard,Michael Toler,Paul Macharia,2012-06-01 Africas Islamic Experiences- History, Culture, and Politics Edited by Ali A. Mazrui, Patrick M. Dikirr, Robert Ostergard Jr., Michael Toler & Paul Macharia This volume is rich in historic surprises about the fortunes of Islam in African experience, Islam first arrived in Africa while the Prophet Muhammad, the Founder of the religion, was still alive, Ethiopia provided asylum to early Arab Muslims on the run from persecution by fellow Arabs in pre-Islamic Mecca, Today Nigeria has more Muslims than any Arab country, including Egypt. This volume explores not just Islam's impact upon Africa but also Africa's impact on Muslim history. The book explores the geographical expansion of the religion, the revival of ancient Muslim rituals, and the politicization and radicalization of Islam in both colonial and pre-colonial Africa. Is Islam compatible with democracy? Can African Islam peacefully coexist with Christianity? How has Islam in Africa influenced architecture, Literature, race relations, gender relation, and cultural interpenetrations between Arabs and Black Africans? In this era of globalization is Islam a positive vanguard force or a trigger for parochialism and backward-looking nostalgia? In this era of terrorism and counter-terrorism can Islam be mobilized as a force for stability or has the religion been irretrievably hijacked by its own worst radicals? This volume does not try to answer all the questions, but it helps to lay the basic groundwork for understanding Islam much better in this new age.

Islam's Lunisolar Calendar and the Celestial Year-Clock Mark Andrew Brustman,2023-10-25 This book shows that the Prophet Muhammad ﷺ used and taught a lunisolar calendar in which the month of Ramadan always contained the southward equinox and the Hajj was always at the winter solstice. The evidence for this comes from the Holy Qur'an, the hadith and the sirah. The strictly lunar calendar currently in use, with months that drift through the seasons, was instituted during the time of the second caliph 'Umar ibn al-Khattab. The nasi' of verse 9:37 in the Qur'an referred not to a postponed month, but to the head of the supreme rabbinical council who controlled the starts of months and years in the Jewish calendar. The book describes the well-known synchronization of the lunar and solar cycles every nineteen years, while also explaining for the first time how a tabular calendar like the Jewish calendar gradually goes out of season by omitting necessary shifts in the order of leap years every 341 years on average. The book features: - primary source passages in Arabic and Hebrew with English translation - a table with Julian dates of major events in the Prophet's life - lunar month tables for the present day and during Muhammad's prophethood - an enumerated list of Qur'an verses containing the words yaum (day), shahr (month) and sanah (year), indicating the Qur'an's numerological endorsement of the lunisolar calendar - illustrations of the 19-year cycle and the celestial year-clock - diagram showing leap-year shifts over a period of 6479 years - a proposal for keeping the slowly drifting Jewish calendar in season from now on - glossary of relevant calendrical and Islamic terms - bibliography - indexes of Qur'an verses cited and of personal names mentioned

By Noon Prayer Fadwa El Guindi,2020-05-25 A groundbreaking anthropological analysis of Islam as experienced by Muslims, *By Noon Prayer* builds a conceptual model of Islam as a whole, while travelling along a comparative path of biblical, Egyptological, ethnographic, poetic, scriptural and visual materials. Grounded in long-term observation of Arabo-Islamic culture and society, the study captures the rhythm of Islam weaving through the lives of Muslim women and men. Examples of the rhythmic nature of Islam can be seen in all aspects of Muslims' everyday lives. Muslims break their Ramadan fast upon the sun setting, and they receive Ramadan by sighting the new moon. Prayer for their dead is by noon and burial is before sunset. This is space and time in Islam - moon, sun, dawn and sunset are all part of a unique and unified rhythm, interweaving the sacred and the ordinary, nature and culture in a pattern that is characteristically Islamic.

Turner engages with the broad categories of capitalism, orientalism, modernity, gender, and citizenship among others, as he examines how Muslims adapt to changing times and how Islam has come to be managed by those in power.

Reading Clocks, Alla Turca Avner Wishnitzer,2015-07-07 Up until the end of the eighteenth century, the way Ottomans used their clocks conformed to the inner logic of their own temporal culture. However, this began to change rather dramatically during the nineteenth century, as the Ottoman Empire was increasingly assimilated into the European-dominated global economy and the project of modern state building began to gather momentum. In *Reading Clocks*, Alla Turca, Avner Wishnitzer unravels the complexity of Ottoman temporal culture and for the first time tells the story of its transformation. He explains that in their attempt to attain better surveillance capabilities and higher levels of regularity and efficiency, various organs of the reforming Ottoman state developed elaborate temporal constructs in which clocks played an increasingly important role. As the reform movement spread beyond the government apparatus, emerging groups of officers, bureaucrats, and urban professionals incorporated novel time-related ideas, values, and behaviors into their self-consciously

“modern” outlook and lifestyle. Acculturated in the highly regimented environment of schools and barracks, they came to identify efficiency and temporal regularity with progress and the former temporal patterns with the old political order. Drawing on a wealth of archival and literary sources, Wishnitzer’s original and highly important work presents the shifting culture of time as an arena in which Ottoman social groups competed for legitimacy and a medium through which the very concept of modernity was defined. Reading Clocks, Alla Turca breaks new ground in the study of the Middle East and presents us with a new understanding of the relationship between time and modernity.

Astronomy and Astrology in the Islamic World Stephen P. Blake,2016-04-08 It was the astronomers and mathematicians of the Islamic world who provided the theories and concepts that paved the way from the geocentric theories of Claudius Ptolemy in the second century AD to the heliocentric breakthroughs of Nicholas Copernicus and Johannes Kepler in the sixteenth and seventeenth centuries. Algebra, the Arabic numeral system, and trigonometry: all these and more originated in the Muslim East and undergirded an increasingly accurate and sophisticated understanding of the movements of the Sun, Moon, and planets. This nontechnical overview of the Islamic advances in the heavenly sciences allows the general reader to appreciate (for the first time) the absolutely crucial role that Muslim scientists played in the overall development of astronomy and astrology in the Eurasian world.
