Darkwing Kenneth Oppel,2011-11-15 Before there were bats like Shade, Marina or even Goth, there was a young chiropter—a small arboreal glider—named Dusk. . . . It is 65 million years ago, during a cataclysmic moment in the earth's evolution, and Dusk, just months old, has no way of knowing he will play a pivotal role in creating a new world. What he does know is that he is different from the other newborn chiropters. Not content to use his large sails to glide down from the giant sequoia tree, Dusk discovers that if he flaps quickly enough, he can fly. But this strange gift that makes him feel like an outcast from the colony will also make him its saviour. After most of the colony is savagely massacred by the felids—the earth's first mammalian carnivores—Dusk must lead his fellow chiropters to a new home, and a new life. Against a tableau of disappearing dinosaurs and the ascent of the mammal kingdom, Oppel has created an adventure fantasy that sets the stage for the birth of the bats, the story of the forebears of Shade, the beloved hero of the Silverwing series. As with all Silverwing books, it is impossible to simply read Oppel's *Darkwing*; each of us enters a world of convincing characters, warring theologies, incredible natural history and a story that roars through head, heart and imagination. A tale that can be read as a stand- lone or as a prequel, *Darkwing* will be a welcome new classic for the millions of Kenneth Oppel fans.

Lone Survivors Chris Stringer, 2012-03-13 A leading researcher on human evolution proposes a new and controversial theory of how our species came to be. In this groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own out of Africa theory, which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent. Stringer's new theory, based on archeological and genetic evidence, holds that distinct humans coexisted and competed across the African continent—exchanging genes, tools, and behavioral strategies. Stringer draws on analyses of old and new fossils from around the world, DNA studies of Neanderthals (using the full genome map) and other species, and recent archeological digs to unveil his new theory. He shows how the most sensational recent fossil findings fit with his model, and he questions previous concepts (including his own) of modernity and how it evolved. *Lone Survivors* will be the definitive account of who and what we were, and will change perceptions about our origins and about what it means to be human.
