Transmedia/Genre Matthew Freeman, Anthony N. Smith, 2023-02-05 This book brings genre back to the forefront of the current transmedia trend. Genres are perhaps the most innately transmedial of media constructs, formed as they are from all kinds of industrial, technological and discursive phenomena. Yet, few have considered how genre works in a multiplatform context. This book does precisely that, making a uniquely transmedial contribution to the study of genre in the age of media convergence. The book interrogates how industrial, technological and participatory transformations of digital platforms and emerging technologies reshape workings of genre. The authors consider franchises such as Star Wars, streaming platforms such as Netflix, catch-up services such as ITV Hub, creative technologies such as virtual reality, and beyond. In setting the stage for the revival of genre theory in contemporary transmedia scholarship, this book pushes forward understandings of multiplatform media and the emerging form and function of genre across contemporary culture.

Online TV Catherine Johnson, 2019-01-04 With growth in access to high-speed broadband and 4G, and increased ownership of smartphones, tablets and internet-connected television sets, the internet has simultaneously begun to compete with and

transform television. Online TV argues that these changes create the conditions for an emergent internet era that challenges the language and concepts that we have to talk about television as a medium. In a wide-ranging analysis, Catherine Johnson sets out a series of conceptual frameworks designed to provide a clearer language with which to analyse the changes to television in the internet era and to bring into focus the power dynamics of the online TV industry. From providing definitions of online TV and the online TV industry, to examining the ways in which technology, rights, interfaces and algorithms are used to control and constrain access to audiovisual content, Online TV is a timely intervention into debates about contemporary internet and television cultures. A must-read for any students, scholars and practitioners who want to understand and analyse the ways in which television is intertwining with and being transformed by the internet.

EBOOK: Media Convergence Tim Dwyer, 2010-02-16 With Media Convergence, Tim Dwyer has given us a bold restatement of the political economy approach for a 21st century media environment where traditional industry silos are collapsing, and where media users are increasingly engaged with the production and distribution of media and not simply its consumption. The book displays considerable attention to institutional detail and comparative analysis, and is well designed to provide a road map of current and future trends for policy makers and media activists, as well as students and future workers in the convergent media space. Professor Terry Flew, Creative Industries Faculty, Queensland University of Technology, Australia How will people access digital media content in the future? What combination of TV, computer or mobile device will be employed? Which kinds of content will become commonplace? Rapid changes in technology and the media industries have led to new modes of distributing and consuming information and entertainment across platforms and devices. It is now possible for newspapers to deliver breaking news by email alerts or RSS feeds, and for audiovisual content to be read, listened to or watched at a convenient time, often while on the move. This process of 'media convergence', in which new technologies are accommodated by existing media industries, has broader implications for ownership, media practices and regulation. Dwyer critically analyses the political, economic, cultural, social, and technological factors that are shaping these changing media practices. There are examples of media convergence in everyday life throughout, including IPTV, VoIP and Broadband networks. The impacts of major traditional media players moving into the online space is illustrated using case studies such as the acquisition of the social networking site MySpace by News Corporation, and copyright issues on Google's YouTube. This informative resource is key reading for media studies students, researchers, and anyone with an interest in media industries, policy and regulation.

Television and the Second Screen James Blake, 2016-11-10 Television is changing almost beyond recognition. In the battle for consumers, social media sites, smart phones and tablets have become rivals to traditional linear TV. However, audiences and producers are also embracing mobile platforms to enhance TV viewing itself. This book examines the emerging phenomenon of the second screen: where users are increasingly engaging with

content on two screens concurrently. The practice is transforming television into an interactive, participatory and social experience. James Blake examines interactive television from three crucial angles: audience motivation and agency, advances in TV production and the monetisation of second screen content. He also tracks its evolution by bringing together interviews with more than 25 television industry professionals - across the major UK channels - including commissioning editors, digital directors, producers and advertising executives. These reveal the successes and failures of recent experiments and the innovations in second screen projects. As the second screen becomes second nature for viewers and producers, the risks and opportunities for the future of television are slowly beginning to emerge. Television and the Second Screen will offer students and scholars of television theory, industry professionals and anyone with an abiding interest in television and technology, an accessible and illuminating guide to this important cultural shift.

Television Versus the Internet Barrie Gunter, 2010-09-01 This book will explore the questions raised by the technological developments that have encouraged the multiplication of TV channels. TV is moving through a period of rapid change. Governments around the world are switching from analogue to digital forms of transmission to further expand the amount of content that TV signals can carry. At the same time, competition for eyeballs has also grown from outside that traditional marketplace with the emergence of the Internet. The roll-out of broadband and increased bandwidth has had the greatest impact on television because online technology can readily convey the same content. All these changes have created a great deal more competition for viewers within the traditional TV marketplace. The Internet has proven to be especially popular with young people who have adopted its applications to a far greater extent than their elders, though even the latter have now begun to take up online activities in significant numbers. Are these audiences the same? Do people make a choice between these two media or do they use them both at different times and for different reasons? Can television utilise the Internet in profitable ways to enhance its market position? Will television have to evolve from its current state to provide the kinds of content reception services to which people have become accustomed in the online world? If it does need to change to survive, will this nevertheless mean a radical new configuration of content and the disappearance of 'channels' with fixed, pre-determined programme schedules? Examines the implications of new interactive communications technologies for the way people will use television in the future Presents an analysis of changing styles of television viewing and changing orientations towards television Examines the growing importance of the broadband internet as a source of information and entertainment
