Anatomy of a Home Studio Scott R. Wilkinson, 1997 From the pages of Electronic Musician magazine come these words of wisdom from Scott Wilkinson. He bridges the information gap between beginner and high-end user as he demystifies the decibel, explains SCSI secrets, and makes sense of MIDI. Other topics include the principles of digital audio, effects processors, microphones and more. You'll also get two glossaries: one general and the other packed with Internet terms.

Corpus linguistics around the world, 2016-08-01 This volume contains a selection of the papers delivered at the Corpus Linguistics 2003 conference, held at Lancaster University in April 2003. The papers selected address a wide range of world languages - Basque, Chinese, Danish, Dutch, English, French, German, Maltese, Russian, Spanish, and Slovene. Both synchronic and diachronic studies are included, as well as studies of learner language. In addition to mainstream linguistic analyses of phonetics, vocabulary, syntax, semantics, and rhetoric, application areas covered in the volume include financial forecasting, cross-cultural research, corpus processing, and language teaching.

Supporting Inclusive Growth and Sustainable Development in Africa - Volume II Elena G. Popkova, Bruno S. Sergi, Lubinda Haabazoka, Julia V. Ragulina, 2020-10-27 This edited volume explores and dissects Africa's economic growth and sustainable development using an optimal conceptual model of the progressive continent's development up to and until 2030. Africa is studied not against the background of developed (OECD) and leading developing (e.g. BRICS) countries, but as a separate economy and as a self-sufficient region which follows its own priorities, and implements its own unique opportunities and vectors of growth and development. This volume addresses the contemporary and topical issues of inclusive growth, digital modernisation, and sustainable development, recommending

policy outcomes for the future.

Smartphone-based Learning in the Japanese ESL

Classroom Nicolas Gromik,2017-05-11 Mobile Assisted Learning emerged from Computer Assisted Learning, with researchers extending computer-based activities to mobile platforms, but differs from the latter in many ways. First, it is obviously mobile, but, second, smartphones have converged many features and software that were previously accessible through a range of digital tools. Thirdly, Mobile Assisted Learning allows interaction with social media. Educators are well-advised to consider smartphone video-based learning and to understand the many possibilities it affords. This book provides an account of the integration of smartphone video recording in the language classroom. It outlines and reports on the implementation process and the practical issues related to this learning method. Using simple digital storytelling, and mini-documentary filmmaking, students are able to learn to speak in a foreign language, while at the same time exploring and experimenting with video production. As such, this book will take readers on a journey through various educational concepts that enhance the formulation of a smartphone based learning approach, as well as suggesting that digital video production is not just a task, it is a 21st century skill necessary for all academics and learners.

Applications of Modern Dynamics to Celestial

Mechanics and Astrodynamics V.G. Szebehely,2012-12-06 This volume contains the detailed text of the major lectures and the abstracts of the lectures delivered during the seminar sessions. The subject of our NATO Advanced Study Institute in 1981 was the Application of Modern Dynamics to Celestial Mechanics and

Astrodynamics. This Preface will first explain the terminology, then it will review shortly the content of the lectures and will outline how all this was made possible and, finally, it will disclose our future aspirations. Periodicity is an extremely important concept in our field, therefore, it should not be unexpected that our NATO Advanced Study Institute is enjoying a period of three years. Since 1972 we conducted four Institutes with increasing interest and enthusiasm displayed by the participants, lecturers and by this Director. Celestial Mechanics or Dynamical Astronomy is part of Astronomy dealing mostly with the motion of natural celestial bodies. Astrodynamics or Orbital Mechanics is the application of dynamics to problems of Space Engineering and it treats mostly the dynamical behavior of artificial satellites and space probes. The underlying mathematical and dynamical principles are, of course, the same for Celestial Mechanics and for Astrodynamics. This Director of the Institute and Editor of the Proceedings was extremely fortunate to have obtained the cooperation of outstanding lecturers who were clear, thorough, understandable, patient to answer questions, but above all, had knowledge of the ix V. Szebehely (ed.). Applications of Modern Dynamics to Celestial Mechanics and Astrodynamics. ix-x.
