How to Travel without Seeing: Dispatches from the New Latin America Andrés Neuman, 2016-08-30 A kaleidoscopic, fast-paced tour of Latin America from one of the Spanish-speaking world's most outstanding writers. Lamenting not having more time to get to know each of the nineteen countries he visits after winning the prestigious Premio Alfaguara, Andrés Neuman begins to suspect that world travel consists mostly of "not seeing." But then he realizes that the fleeting nature of his trip provides him with a unique opportunity: touring and comparing every country of Latin America in a single stroke. Neuman writes on the move, generating a kinetic work that is at once puckish and poetic, aphoristic and brimming with curiosity. Even so-called non-places—airports, hotels, taxis—are turned into powerful symbols full of meaning. A dual Argentine-Spanish citizen, he incisively explores cultural identity and nationality, immigration and globalization, history and language, and turbulent current events. Above all, Neuman investigates the artistic lifeblood of Latin America, tackling with gusto not only literary heavyweights such

as Bolaño, Vargas Llosa, Lorca, and Galeano, but also an emerging generation of authors and filmmakers whose impact is now making ripples worldwide. Eye-opening and charmingly offbeat, *How to Travel without Seeing: Dispatches from the New Latin America* is essential reading for anyone interested in the past, present, and future of the Americas.

Microphysics of Clouds and Precipitation H.R. Pruppacher, J.D. Klett, 1996-12-31
Cloud physics has achieved such a voluminous literature over the past few decades that a significant quantitative study of the entire field would prove unwieldy. This book concentrates on one major aspect: cloud microphysics, which involves the processes that lead to the formation of individual cloud and precipitation particles. Common practice has shown that one may distinguish among the following additional major aspects: cloud dynamics, which is concerned with the physics responsible for the macroscopic features of clouds; cloud electricity, which deals with the electrical structure of clouds and the electrification processes of cloud and precipitation particles; and cloud optics and radar meteorology, which describe the effects of electromagnetic waves interacting with clouds and precipitation. Another field intimately related to cloud physics is atmospheric chemistry, which involves the chemical composition of the atmosphere and the life cycle and characteristics of its gaseous and particulate constituents. In view of the natural interdependence of the various aspects of cloud physics, the subject of microphysics cannot be discussed very meaningfully out of context. Therefore, we have found it necessary to touch briefly upon a few simple and basic concepts of cloud dynamics and thermodynamics, and to provide an account of the major characteristics of atmospheric

aerosol particles. We have also included a separate chapter on some of the effects of electric fields and charges on the precipitation-forming processes.

Destiny Has No Favorites Dieter Klett, 2012-10 This is a story of a person arriving in this country in this country and in this city where he eventually ended up in the middle of the night, not knowing a soul in Canada and having just about \$10.- in his pocket. Using my imagination I let this imaginary person - Peter- show the reader the adventures and misadventures he and eventually his family experienced in this for him so strange and at the same time exciting new place. I decided to cover a period of roughly the first 25 years Peter spent in his new chosen homeland. I could have continued showing the development of his and his family's life after the 25 year period, but I decided against that. I wanted this story to have closure. Another possible book would show the reader how Peter's life continued after 25 years and would show us how he and his loved ones continued with their lives with its ups and downs. The gist of the events occurred from the mid 1950's until the early 1980's. I actually completed this book in 1982. It was lying in my filing cabinet

for 30 years, because I never had either the time or inclination to publish in writing. The title of this publication: *Destiny has no Favorites* is correct. Destiny, or fate, has no favorites and we all are at the mercy of this destiny destined for us by that higher power we may call God, Nature, the Absolute Being, the Creator, Providence, the Omnipotent, Being the Supreme Soul or whatever mage us feel better to accept the unacceptable.

Going it Alone? Martina Klett-Davies, 2016-04-15 Are lone mothers 'going it alone' in late modernity? In this fascinating work, Martina Klett-Davies examines how women

negotiate lone motherhood in Britain and Germany. She draws on interviews with 70 unmarried lone mothers living on state benefits in inner city areas to examine the complexity and diversity of their lives, the ways in which they try to manage choices and constraints, and how they position themselves as carers, dependants or as paid workers. *Going it Alone?* assesses the extent to which individualization can explain the experience of state-dependent lone mothers, further develops the concept and provides a better understanding of lone mothers. Suggestions with regard to paid employment, education and state benefits are provided as well as policy recommendations for increasing the options available to lone mothers.
