Computational Fluid and Solid Mechanics 2003 K.J Bathe, 2003-06-02 Bringing together the world's leading researchers and practitioners of computational mechanics, these new volumes meet and build on the eight key challenges for research and development in computational mechanics. Researchers have recently identified eight critical research tasks facing the field of computational mechanics. These tasks have come about because it appears possible to reach a new level of mathematical modelling and numerical solution that will lead to a much deeper understanding of nature and to great improvements in engineering design. The eight tasks are: The automatic solution of mathematical models Effective numerical schemes for fluid flows The development of an effective mesh-free numerical solution method The development of numerical procedures for multiphysics problems The development of numerical procedures for multiscale problems The modelling of uncertainties The analysis of complete life cycles of systems Education - teaching sound engineering and scientific judgement Readers of Computational Fluid and Solid Mechanics 2003 will be able to apply the combined experience of many of the world's leading researchers to their own research needs. Those in academic environments will gain a better insight into the needs and constraints of the industries they are involved with; those in industry will gain a competitive advantage by gaining insight into the cutting edge research being carried out by colleagues in academia. Features Bridges the gap between academic researchers and practitioners in industry Outlines the eight main challenges facing Research and Design in Computational mechanics and offers new insights

into the shifting the research agenda Provides a vision of how strong, basic and exciting education at university can be harmonized with life-long learning to obtain maximum value from the new powerful tools of analysis

The Evolution of the Black Rifle: 20 Years of Upgrades, Options, and Accessories Jeff Zimba, 2014-11-26 Jeff Zimba brings the reader on a twenty-year journey through the testing and evaluation phase of America's longest serving battle rifle, now known by many names, such as the AR-15, M16, M4, 416, and many others. From the History and Development of the Modern Black Rifle (an award winning, in-depth article) to accessories and configurations the reader may have never even heard about, this book includes numerous, previously published articles focused solely on the black rifle and includes a few of the author's picks for new upgrades and systems to watch in the future. With a Foreword by legendary musician, outspoken outdoorsman, and 2nd Amendment advocate, Ted Nugent, and a Preface by a former Navy Seal of the elite Team 6 and member of the top secret team REDCELL, never before has such a compilation of articles on a single weapon system been published. Join Jeff Zimba on his journey to study (in his words) the most versatile modular weapon system ever designed.

Acronyms, Initialisms & Abbreviations Dictionary, 2001-05 Each volume separately titled: v. 1, Acronyms, initialisms & abbreviations dictionary; v. 2, New acronyms, initialisms & abbreviations (formerly issued independently as New acronyms and initialisms); v. 3, Reverse acronyms, initialisms & abbreviations dictionary (formerly issued independently as Reverse acronyms and initialisms dictionary).

Guns of the Special Forces, 2001–2015 Leigh Neville, 2016-03-31 An in-depth look at the weaponry employed by Special Forces units around the world following the September 11th attacks. In the years since 9/11, Special Forces of many nations have been in almost constant action in covert, high risk operations around the globe. These include the two long conflicts in Iraq and Afghanistan, fighting nationalist insurgents and jihadist terrorists, as well as other lesser-known operations. The weapons used by SF are a constant source of interest and speculation, as are SF training, methods and vehicles. The armories of these elite units have developed rapidly to meet their demands and the ever more sophisticated threat. They include for example suppressed piston-driven carbines, programmable grenade launchers that airburst behind hidden enemy, and sniper rifles of extreme accuracy and range. This highly researched book gives the reader a privileged insight into this secret world, exploring the custom-built weapons that operators carry on capture/kill missions in the 21st Century. Praise for *Guns of Special Forces* “A cut above most of the books that purport to review special ops weapons. Its limitation to the War on Terror years allows coverage of the many weapon developments that have taken place as special operations units have been constantly deployed and in action over the last decade and a half.” —SWAT Magazine

Disintegration Andrei Martynov, 2021-05-01 The United States is undergoing a profound and radical transformation, all features of which point to the fact of its departure at an accelerated rate from its largely self-proclaimed status as a global hegemon. The United States has lost ground in every single category that defines the power and status of a nation in relation to its rivals. This book delves into the reasons for a catastrophic decline of the American nation, addressing a range of factors from the economic (especially energy), to cultural, technological and military factors. America's deindustrialized economy is now deeply affected by what can only be described as a massacre of her small and middle-size businesses and the implosion of the US commercial aerospace industry. America's only driver of real growth, the shale oil industry, is facing realities which may make the Great Depression pale in comparison. Disintegration also seeks answers to the precipitous moral and professional decline of the always mediocre qualities of the American elites, from the corridors of political power to those of the military and business, now spiraling out of control. More alarmingly, the trend also points to the possibility of the actual physical disintegration of the United States as a unified entity—whether the divisions are ethnic or ideological. The most profound

fault line is cultural—between the Coastal self-proclaimed elites backed by the secular, liberal media and deep state, who promote the most radical ideologies as it concerns gender and race, and the working class majority whom the former polemicize as deplorables, Christian fundamentalists, white supremacists, and climate and science denialists. Investigating these factors sheds light on America’s future which holds very little promise for the country which had once proclaimed itself to be a shining city on the hill. The American collapse is not just coming, we are presently experiencing it. How can we deal with a catastrophe which is unfolding before our very eyes? Disintegration lays out some possibilities.
