Handbook of Forest Resource Economics Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber. Forests provide other key ecosystem services, such as being sinks for greenhouse gases, hotspots of biodiversity, tourism and recreation. They are also vitally important in preventing soil erosion and controlling water supplies, as well as providing non-timber forest products and supporting the livelihoods of many local people. This handbook provides a detailed, comprehensive and broad coverage of forest economics, including traditional forest economics of timber production, economics of environmental role of forests, and recent developments in forest economics. The chapters are grouped into six parts: fundamental topics in forest resource economics; economics of forest ecosystems; economics of forests, climate change, and bioenergy; economics of risk, uncertainty, and natural disturbances; economics of forest property rights and certification; and emerging issues and developments. Written by leading environmental, forest, and natural resource economists, the book represents a definitive reference volume for students of economics, environment, forestry and natural resource economics and management.

Present-day Dialectology Jan Berns, Jaap van Marle, 2011-05-12 Present-day Dialectology does not treat dialectology as an isolated discipline. Instead, it discusses dialectological topics within the framework of present-day linguistics. The book contains papers which seek to confront recent phonological, morphologic, syntactic and semantic theory with dialectological data. In addition, it explores the link between dialectology on the one hand and sociolinguistics and the study of language contact on the other.

Handbook of Perceptual Dialectology Dennis Richard Preston, 1999-01-01 Perceptual dialectology investigates what ordinary people (as opposed to professional linguists) believe about the distribution of language varieties in their own and surrounding speech communities and how they have arrived at and implemented those beliefs. It studies the beliefs of the common folk about which dialects exist and, indeed, about what attitudes they have to these varieties. Some of this leads to discussion of what they believe about language in general, or folk linguistics. Surprising divergences from professional results can be found. For the professional, it is intriguing to find out why and whether the folk can be wrong or whether the professional has missed something. Volume 1 of this handbook aims to provide for the field of perceptual dialectology: a historical survey; a regional survey, adding to the earlier preponderance of studies in Japan, the Netherlands, and the United States; a methodological survey, showing, in detail, how data have been acquired and processed; an interpretive survey, showing how these data have been related to both linguistic and other socio-cultural facts; a comprehensive bibliography. The results and methods of perceptual dialectical studies should be interesting not only to linguists, variationists, dialectologists, and students of the social psychology of language but also to sociologists, anthropologists, folklorists, and other students of culture as well as to language planners and educators.

Fukaya Categories and Picard-Lefschetz Theory Paul Seidel,2008 The central objects in the book are Lagrangian submanifolds and their invariants, such as Floer homology and its multiplicative structures, which together constitute the Fukaya category. The relevant aspects of pseudo-holomorphic curve theory are covered in some detail, and there is also a self-contained account of the necessary homological algebra. Generally, the emphasis is on simplicity rather than generality. The last part discusses applications to Lefschetz fibrations and contains many previously unpublished results. The book will be of interest to graduate students and researchers in symplectic geometry and mirror symmetry.

Structural Equation Modelling with Partial Least Squares Using Stata and R Mehmet Mehmetoglu, Sergio Venturini, 2020-12-22 Partial least squares structural equation modelling (PLS-SEM) is becoming a popular statistical framework in many fields and disciplines of the social sciences. The main reason for this popularity is that PLS-SEM can be used to estimate models including latent variables, observed variables, or a combination of these. The popularity of PLS-SEM is predicted to increase even more as a result of the development of new and more robust estimation approaches, such as consistent PLS-SEM. The traditional and modern estimation methods for PLS-SEM are now readily facilitated by both open-source and commercial software packages. This book presents PLS-SEM as a useful practical statistical toolbox that can be used for estimating many different types of research models. In so doing, the authors provide the necessary technical prerequisites and theoretical treatment of various aspects of PLS-SEM prior to practical applications. What makes the book unique is the fact that it thoroughly explains and extensively uses comprehensive Stata (plssem) and R (cSEM and plspm) packages for carrying out PLS-SEM analysis. The book aims to help the reader understand the mechanics behind PLS-SEM as well as performing it for publication purposes. Features: Intuitive and technical explanations of PLS-SEM methods Complete explanations of Stata and R packages Lots of example applications of the methodology Detailed interpretation of software output Reporting of a PLS-SEM study Github repository for supplementary book

material. The book is primarily aimed at researchers and graduate students from statistics, social science, psychology, and other disciplines. Technical details have been moved from the main body of the text into appendices, but it would be useful if the reader has a solid background in linear regression analysis.

Functional Analysis R.E. Edwards, 2012-10-25 The book contains an enormous amount of information – mathematical, bibliographical and historical – interwoven with some outstanding heuristic discussions. – Mathematical Reviews. In this massive graduate-level study, Emeritus Professor Edwards (Australian National University, Canberra) presents a balanced account of both the abstract theory and the applications of linear functional analysis. Written for readers with a basic knowledge of set theory, general topology, and vector spaces, the book includes an abundance of carefully chosen illustrative examples and excellent exercises at the end of each chapter. Beginning with a chapter of preliminaries on set theory and topology, Dr. Edwards then presents detailed, in-depth discussions of vector spaces and topological vector spaces, the Hahn-Banach theorem (including applications to potential theory, approximation theory, game theory, and other fields) and fixed-point theorems. Subsequent chapters focus on topological duals of certain spaces: radon measures, distribution and linear partial differential equations, open mapping and closed graph theorems, boundedness principles, duality theory, the theory of compact operators and the Krein-Milman theorem and its applications to commutative harmonic analysis. Clearly and concisely written, Dr. Edwards's book offers rewarding reading to mathematicians and physicists with an interest in the important field of functional analysis. Because of the broad scope of its coverage, this volume will be especially valuable to the reader with a basic knowledge of functional analysis who

wishes to learn about parts of the subject other than his own specialties. A comprehensive 32-page bibliography supplies a rich source of references to the basic literature.
