Low-Power and High-Sensitivity Magnetic Sensors and Systems Eyal Weiss, Roger

Alimi, 2018-10-31 This comprehensive new resource analyzes sources of noise and clutter that magnetic sensing system developers encounter. This book guides practitioners in designing and building low noise and low power consumption magnetic measurement systems. Various examples of magnetic surveillance and survey systems are provided. This book enables system designers to obtain an all-inclusive spectral understanding of typical sources of noise and clutter present in the system and environment for each application, in order to successfully design stable and sensitive low power magnetic sensing devices. Detection and localization methods are explored, as well as deterministic and heuristics algorithms which are an integral part of any magnetic sensing system. This book is aimed to eliminate some of the black magic manipulations present during low noise magnetic measurements. The book meticulously describes, analyzes and quantifies the variables that affect low noise measurement systems. Readers are able to understand sources of measurements irregularities and how to effectively mitigate them. Moreover, this book also presents low power magnetometers and dedicated low noise sampling techniques.

Unscheduled Arrival Mike Barbuti, 2000-12 It was only suppose to be a routine expedition to look for a downed aircraft. At least that's what Dr. Raymond Michaels thought when his ship left dock that morning. But things turned out to be far from normal as Dr. Michaels makes one of the most startling discoveries in history! A discovery that makes him first, a hero, then, lands him in jail as a traitor where he helplessly watches as the world pushes itself ever closer to war, when it's leaders can't decide how to cope with his amazing discovery. But Dr. Michaels has allies, powerful allies, that even he is unaware of. A beautiful French spy, a billionaire industrialist and a U.S. Senator, all with questionable motives, come into his life and he into theirs. Yet even as he questions their convictions, along with his own sanity, he realizes that he must use them to help him carry out a desperate plan to save mankind. Then, as he races to implement his intricate scheme, the first shots are fired! Can the world hold itself together long enough for Dr. Michaels to reveal the truth about his discovery? Does he even know the whole truth?

Lost Subs Spencer Dunmore, 2010-08 Through gripping text and powerful images, this chronicle traces the evolution of the submarine and the history of under-the-seas warfare. Harrowing tales of a submerged death and eerie images of ghost ships are haunting, yet the daring stories of the vessels and their inhabitants invoke a nostalgic courage, allowing the reader to reflect on a sunken, dark fate that is rarely mentioned. State-of-the-art underwater photographs, accompanied by archival images and cutaway diagrams, answer many questions about why each submarine sank and make this the definitive illustrated history.

Magnetic Sensors and Magnetometers, Second Edition Pavel Ripka, 2021-07-31 This completely updated second edition of an Artech House classic covers industrial applications and space and biomedical applications of magnetic sensors and magnetometers. With the advancement of smart grids, renewable energy resources, and electric vehicles, the importance of electric current sensors increased, and the book has been updated to reflect these changes. Integrated fluxgate single-chip magnetometers are presented. GMR sensors in the automotive market, especially for end-of-shaft angular sensors, are included, as well as Linear TMR sensors. Vertical Hall sensors and sensors with integrated ferromagnetic concentrators are two competing technologies, which both brought 3-axial single-chip Hall ICs, are considered. Digital fluxgate magnetometers for both satellite and ground-based applications are discussed. All-optical resonant magnetometers, based on the Coherent Population Trapping effect, has reached approval in space, and is covered in this new edition of the book. Whether you're an expert or new to the field, this unique resource offers you a thorough overview of the principles and design of magnetic sensors and magnetometers, as well as guidance in applying specific devices in the real world. The book covers both multi-channel and gradiometric magnetometer systems, special problems such as cross-talk and crossfield sensitivity, and comparisons between different sensors and magnetometers with respect to various application areas. Miniaturization and the use of new materials in magnetic sensors are also discussed. A comprehensive list of references to journal articles, books, proceedings and webpages helps you find additional information quickly.

Airborne Night Airglow Measurements in the South Atlantic Magnetic Anomaly Thomas P. Markham, 1966 Measurements of the night airglow 5577 Å and 6300 Å lines were made in the South Atlantic Magnetic Anomaly from an Air Force KC-135 aircraft. The data does not show any intensity enhancement over that found outside the anomaly region. (Author).

The book also contains information on the most recent developments in the field of each sensor type. This important book: Provides an even treatment of the major foundations of magnetic biosensors Presents problem solution methods such as analytical and numerical Explains how solution methods complement each other, and offers information on their materials, design, computer aided modelling and simulation, optimization, and device fabrication Describes modeling work challenges and solutions Written for students in electrical and electronics engineering, physics, chemistry, biomedical engineering, and biology, Magnetic Sensors for Biomedical Applications offers a guide to the principles of biomagnetic sensors, recent developments, and reveals the impact of sensor modelling and simulation on magnetic sensors.

C4ISR for Future Naval Strike Groups National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee on C4ISR for Future Naval Strike Groups, 2006-04-26 The Navy has put forth a new construct for its strike forces that enables more effective forward deterrence and rapid response. A key aspect of this construct is the need for flexible, adaptive command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) systems. To assist development of this capability, the Navy asked the NRC to examine C4ISR for carrier, expeditionary, and strike and missile defense strike groups, and for expeditionary strike forces. This report provides an assessment of C4ISR capabilities for each type of strike group; recommendations for C4ISR architecture for use in major combat operations; promising technology trends; and an examination of organizational improvements that can enable the recommended architecture.
