Advances in Robotics Research: From Lab to Market Antoni Grau,Yannick Morel,Ana Puig-Pey,Francesca Cecchi,2019-09-17 In this book Part I presents first an overview of the ECHORD++ project, with its mission and vision together with a detailed structure of its functionalities and instruments: Experiments, Robotic Innovation Facilities and Public end-user Driven Technology Innovation PDTI. Chapter 1 explains how the project is born, the partners, the different instruments and the new concept of cascade funding projects. This novelty made ECHORD++ a special project along the huge number of research groups and consortia involved in the whole project. So far, it is the European funded project with more research team and partners involved in the robotic field. In Chapter 2, one of the instruments in ECHORD++ is explained in detail: RIF. Robotic innovation facilities are a set of laboratories across Europe funded with the project with the goal of hosting consortia involved in any experiment that have special needs when testing their robotic research. In the chapter the three different and specific RIFs will be described and analyzed. Chapter 3 explains an important instrument in ECHORD++: the Experiments. In this part, a big number of research groups have been involve in short time funded research projects. The chapter explains the management of such Experiments, from the call for participation, the candidate's selection, the monitoring, reviews and funding for each of the 36 experiments funded for Echord. Chapter 4 is very special because it presents the innovation of funding public end-user driven technology, in particular, robotic technology. The robotic challenge is the key of such an instruments together with the management of the different consortia that participated competitively in the success of the robotic challenge proposed by a public entity, selected also with a very special and innovative process.

After Effects and Cinema 4D Lite Chris Jackson,2014-09-04 One of the most exciting new features in After Effects is the integration of Cinema 4D using the CINEWARE plug-in and a free version of Cinema 4D Lite. Both provide a wide assortment of new 3D tools and options that are difficult or nearly impossible to achieve in After Effects alone. This book clearly demonstrates how the new 3D workflow bridges the two applications together to raise the design bar for motion graphics and broadcast design. Hands-on exercises teach you essential production skills including: Modeling in CINEMA 4D Lite Importing 3D models in After Effects Tracking 3D motion in After Effects Compositing with CINEWARE Using MoGraph features in CINEMA 4D Rendering and optimization techniques Additional online materials include project files and videos showcasing the techniques covered in the book. Intelligent Autonomous Systems 17 Ivan Petrovic,Emanuele Menegatti,Ivan Marković,2023-01-17 "IAS has been held every two years since 1986 providing venue for the latest accomplishments and innovations in advanced intelligent autonomous systems. New technologies and application domains continuously pose new challenges to be overcome in order to apply intelligent autonomous systems in a reliable and user-independent way in areas ranging from industrial applications to professional service and household domains. The present book contains the papers presented at the 17th International Conference on Intelligent Autonomous Systems (IAS-17), which was held from June 13-16, 2022, in Zagreb, Croatia. In our view, 62 papers, authored by 196 authors from 19 countries, are a testimony to the appeal of the conference considering travel restrictions imposed by the COVID-19 pandemic. Our special thanks go to the authors and the reviewers for their effort—the results of their joint work are visible in this book. We look forward to seeing you at IAS-18 in 2023 in Suwon, South Korea!"
