Safety and Security at Sea D S Bist,2013-05-13 Safety and
Security at Sea is concerned with the safe operation of ships and
consequently with preventing errors and oversights. This book

contributes to safety where it is most effective - right at the site of work, on board the ship itself. It is here, indisputably, that it will prevent accidents and save lives. It translates theory into practice besides covering several new and current topics. This book is aimed at every deck officer - at every rank and on all ships. The book also attends to other manifest needs and discusses piracy, stowaways, management of crew on board and several other new and current topics in the interest of safety. All deck officers will find, when preparing for professional examinations, that the area which the oral section of these examinations at any level (Class One, Two or Three) cover - safety - is the one in which this book specialises. It will be an invaluable aid in passing these exams. By discussing essential details in every part of a voyage, parts that form different subjects in the theoretical section, it becomes an excellent reference book for them. In addition, it will also assist the staff of shipping companies in compiling ship operation manuals. This book includes the advice of various notices from the Marine Safety Agency and of guidelines from the International Maritime Organisation. It explains their requirements - International safety management code, emergency pollution control plans and others. In order to deal with ship board work thoroughly, this book takes an

entire voyage into account. That is the reason for the sequence of its chapters to correspond to the progress of an actual voyage. The book begins with a ship embarking on a voyage and, in succession, conveys its message in a comfortable language. The last chapter leaves the reader at the beginning of another, but a safer, voyage. A summary is included at the end of each chapter.

Minding the Helm Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Marine Board, 1994-01-01 Large ships transporting hazardous cargoes, notorious marine accidents, and damage to marine ecosystems from tanker spills have heightened public concern for the safe navigation of ships. This new volume offers a complete, highly readable assessment of marine navigation and piloting. It addresses the application of new technology to reduce the probability of accidents, controversies over the effectiveness of waterways management and marine pilotage, and navigational decisionmaking. The book also explores the way pilots of ships and tugs are trained, licensed, and held accountable. Minding the Helm approaches navigational safety from the perspectives of risk assessment and the integration of human, technological, and organizational systems. Air and marine traffic regulation methods

are compared, including the use of vessel traffic services. With a store of current information and examples, this document will be indispensable to federal and state pilotage and licensing authorities and marine traffic regulators, the Coast Guard, pilot associations, and the shipping and towing industries. It will also interest individuals involved in waterway design, marine education, and the marine environment.

Advances in Soft Computing Lourdes Martínez-Villaseñor, Ildar Batyrshin, Antonio Marín-Hernández, 2019-10-26 This volume constitutes the proceedings of the 18th Mexican Conference on Artificial Intelligence, MICAI 2019, held in Xalapa, Mexico, in October/November 2019. The 59 full papers presented in this volume were carefully reviewed and selected from 148 submissions. They cover topics such as: machine learning; optimization and planning; fuzzy systems, reasoning and intelligent applications; and vision and robotics.

Vessel Traffic Systems Charles W. Koburger, 1986 Vessel traffic control systems operate today in perhaps as many as 250 bodies of water throughout the world. The function of a VTS is to increase safety, to accommodate a greater flow of traffic, and to

protect the environment. It generally includes some means of area surveillance, a traffic separation scheme, perhaps a vessel movement reporting scheme, a traffic center and, of necessity, some method of enforcement.
