Dissidents of Law Jirí Pribán, 2019-07-16 This title was first published in 2003: The problem of legitimacy and legality is one of the key issues of modern thought and nowhere more intensely debated than in the countries of the former Soviet bloc. Under the communist system, symbols of modern government had been supplemented and changed in order to serve the totalitarian domination of the Party and all spheres of life, including law, were subsumed within this framework of ideological legitimation. Following the anti-communist revolutions of 1989, former communist societies started the historically unprecedented process of transformation from the totalitarian into liberal democratic society, a transformation which has produced much soul-searching and heated debate. In this book, the author sets out to prove that concern with legitimacy belongs neither exclusively to the legal system nor to a political system separated and distanced from the legal system. The topic of legitimacy and legitimation is inseparable from legality and every legitimation eventually looks for its transformation into legal legitimacy.

Advancements in Urban Environmental Studies Atiqur Rahman, Shouraseni Sen Roy, Swapan Talukdar, Shahfahad, 2023-03-03 According to UN estimates, approximately nearly half of the world's population now lives in cities and that figure is expected to rise to almost 70% by 2050. Cities now account for around 70% of worldwide greenhouse gas emissions, and this percentage is predicted to rise in the near future as a result of projected increases in global urbanization patterns. It is widely acknowledged that irrational urban planning and design can increase emissions while also exacerbating threats and risks, resulting in a slew of environmental issues such as urban heat islands, air pollution, flooding, amongst other issues, as well as environmental, social, and economic losses. Therefore, these concerns must be addressed promptly in order to cope up with these rising difficulties and make urban environments safer for residents. With the advancement of remote sensing technology and the use of current remote observation systems, urban data science, remote sensing, and artificial intelligence (AI), modeling and quantifying emergent difficulties in urban regions and urban systems have become easy. They aid in the quantitative analysis of urban shape, functions, and human behavior in cities. Harvesting data, developing models, and suggesting new methodologies will be aided by combining urban ecology with new breakthroughs in data science. This book is of great value to a diverse group of academicians, scientists, students, environmentalists, meteorologists, urban planners, remote sensing and GIS experts with a common interest in geospatial sciences within the earth environmental sciences, as well as human and social sciences.

Multi-Hazard Early Warning and Disaster Risks Dilanthi Amaratunga, Richard Haigh, Nuwan Dias, 2021-09-11 This book presents a collection of papers under the theme of multi-hazard early warning and disaster risks. These were selected from the presentations made at the International Symposium on Tsunami and Multi-Hazard Risks, Early Warning and Community Awareness in supporting implementation of the Sendai Framework for Disaster Risk Reduction 2015-2030. This conference aimed to recognize achievements and to highlight work that still needs to be carried out. The conference promoted collaboration among academia, research institutions and disaster management offices, and further encouraged multidisciplinary and multi-sectoral interaction. This International Symposium on Multi-Hazard Early Warning and Disaster Risk Reduction provided an important opportunity to reflect upon our progress to date in tackling disaster risk, but also to consider some of the challenges and opportunities that lay ahead of us. A particular focus of this event was Multi-Hazard Early Warning. During the negotiations for the Sendai Framework, countries and partners highlighted the need to: 1. Continue to invest in, develop, maintain and strengthen people-centred, end-to-end early warning systems; 2. Promote the application of simple and low cost early warning equipment and facilities; 3. Broaden the dissemination channels for early warning information to facilitate early action. Countries also called for the further development of and investment in effective, nationally compatible, regional multi-hazard early warning mechanisms. To address these needs, global Target (g) of the Sendai Framework was adopted, namely to “substantially increase the availability of and access to multi-hazard early warning systems and disaster risk information and assessments to the people by 2030”. As illustrated by recent events in Indonesia, it is also vital to address the challenge of cascading hazards that pose a tsunami risk, and the importance of linking tsunami early warning to a multi-hazard environment. However, moving towards a multi-hazard environment is complex and poses many challenges but can bring significant benefits in terms of efficiencies and also in recognising the links between hazards, such as cascading threats. We very much hope that this book will provide an important platform to address these and other challenges in addressing disaster risk, as well as supporting implementation of the Sendai Framework for Disaster Risk Reduction.

Poetry of a Common Man Armin Boko, 2013-07-30 Included in the anthology are previously published poems contained within SECTOR#7 and of Ares and Men, also Sketches and Reflections of 2012. This covers in full the poetic output of the author since 2009. The overall design is a deliberate step away from the abstract modern poetry preoccupied with syllabic dissection and abstract notions to the intentional exclusion of tangible subjects. Modern poetry isn't supposed to make sense, were told, and it is more a play with words and sounds. The free-flowing style here, whilst of variable meter, does no more than serve the purpose. Substance rule over style first and last. It is how it used be before modernists turned it on the head. In this book, preoccupation is with here and now; real people in all kinds of predicament and lifelike situations. It will be instantly recognized. It comes down on sham democracy, war mongers, banksters, and other vermin. Spared is none, least of all the author himself. His sporting inadequacies exposed for one should tickle the funny bone. Above all, the book is an antiwar crusade. On second level, it is on side of those creating the wealth, not those cashing in on the fat spoils. It is poetry of the common man in the street. Enough for young and old and young at heart.

Come Hell or High Fever Russell W Glenn, 2023-01-24 ‘Nations appear and fall, but cities endure and rediscover how to succeed. In this meticulously defined and researched book, Glenn presents ideas for minimising suffering during urban catastrophes. His urgency identifies risks held in urban areas by 3.5 billion people. These people are many of us: as urban populations occupying 3 per cent of our planet’s land area, drawing water from 41 per cent of the world’s ground surface, consuming 60 to 80 per cent of global energy and achieving 80 per cent of the world’s economic productivity. For Glenn, our resilience—through diversity in preparation, survival and recovery—includes comprehensive approaches that are sustained in duration, orchestrated in bringing all necessary capabilities to bear, layered in approach and early in application.’ —Major General Chris Field, Australian Army ‘The time to prepare for the inevitable is now. Dr Glenn has written a book that should be read by all leaders, planners and responders who may be called upon in an urban disaster, whether natural or man-made. Military leaders should give it particular attention, as the human race is increasingly concentrated in its cities. Understanding how to wage war in dense urban terrain is essential, especially if a nation also seeks to hold the moral high ground. The fruits of any victory won among people that fails to consider the lessons in Come Hell or High Fever are likely to be very bitter.’ —Lieutenant General Sean MacFarland, United States Army (retired)

Megacities Steef Buijs,Wendy Wanyin Tan,Devisari Tunas,2010 World cities are reaching previously inconceivable sizes and populations. For the last fifteen years, The Megacities Foundation has encouraged public debate on this development, uniting practitioners from the fields of architecture, economics, geography, sociology and urban planning. This book offers a compilation of the Foundation's best lectures, defining megacities and their processes and systems.

Smart Global Megacities T. M. Vinod Kumar,2021-07-15 This book, the first volume, highlights 8 out of a total of about 36 megacities in the World which by definition have 10 million inhabitants. The cities/chapters presented in this book are based on recent advance such as the wide use of ICT, IOT, e-Governance, e-Democracy, smart economy and flattening and acceleration of the world that is taking place in recent times as reported by 3 times Pulitzer Prize Winner Thomas Friedman. It therefor departs from other ideologies where only a certain megacity qualifies for the title of smart global megacities while in reality every megacity can, and presents how smart global megacities can be created.

Dubai Pranay Gupte,2011 In just two decades, Dubai has reinvented itself from a small, poor and quiet fishing village to a dazzling city with a vibrant urban life. How did this happen? Home to more than 200 nationalities particularly those from the Indian subcontinent the emirate's choice to welcome expatriates has paid off. Cultivating an open and welcoming culture, Dubai manages to attract people from all over the world, heartily embracing any entrepreneurial contribution they wish to make. The emirate is now also known for its cosmopolitan melting-pot culture, and its enabling environment to conduct business, and this, along with the tax-free system and hassle-free infrastructure, makes it a much sought- after site for multinational enterprises who want a base in Asia. Unlike the Gulf emirates that can count on petroleum wealth, Dubai has wound its way to prosperity by planning carefully and executing those plans methodically. Its airline and luxury construction have made it a popular destination for luxury tourism. Projects like the Burj al-Arab, the Palm Jumeriah and the Burj Khalifa, along with events like the world's richest horserace the Dubai World Cup and the Dubai Shopping Festival, have sustained tourist interest and focused the world's attention on the emirate.

Urban Development Challenges, Risks and Resilience in Asian Mega Cities R.B. Singh,2014-10-16 In this book, an interdisciplinary research group of faculty members, researchers, professionals, and planners contributed to an understanding of the dynamics and dimensions of emerging challenges and risks in megacities in the rapidly changing urban environments in Asia and examined emerging resilience themes from the point of view of sustainability and public policy. The world’s urban population in 2009 was approximately 3.4 billion and Asia’s urban population was about 1.72 billion. Between 2010 and 2020, 411 million people will be added to Asian cities (60 % of the growth in the world’s urban population). By 2020, of the world’s urban population of 4.2 billion, approximately 2.2 billion will be in Asia. China and India will contribute 31.3 % of the total world urban population by 2025. Developing Asia’s projected global share of CO2 emissions for energy consumption will increase from 30 % in 2006 to 43 % by 2030. City regions serve as magnets for people, enterprise, and culture, but with urbanisation , the worst form of visible poverty becomes prominent. The Asian region, with a slum population of an estimated 505.5 million people, remains host to over half of the world’s slum population . The book provides information on a comprehensive range of environmental threats faced by the inhabitants of megacities. It also offers a wide and multidisciplinary group of case studies from rapidly growing megacities (with populations of more than 5 million) from developed and developing countries of Asia.
