Honey, I Bought an Airplane Bob Hechlinski, 2012-07-25 No one else ever took a trip like this. Nearly 600 trips, actually. But who cares, I thought, when first approached to edit the manuscript for this book about flying into every little airport in Indiana, then moving on to those in surrounding states? Pilots? Perhaps. Even so I'm a writer, not a pilot. And Bob Hechlinski is a pilot not a writer. Except Bob has an insatiable curiosity about people, places, events, you name it. To him, an airport is more than a name or a spot on a map. He's a great listener. He has ears and eyes for detail nuggets that many people either overlook or don't connect with other nuggets like dots on a page, to create picture after picture after picture. And Bob has a gift for gab. Storytelling, if you will. So if you believe (as I do) that writing is talking when you can't be there, give this book a listen. Hear things you never knew about John Dillinger, Al Capone, a WWII pilot named O'Hare back-road encounters on Mackinac Island and not flying under the bridge out-maneuvering storm clouds the Oshkosh air show close-knit neighborhoods with hangar-garages airports in Ohio police in Gary, Indiana the link between Northwestern University and a historic Lake Michigan passenger-ferry tragedy how a teenager's Happy Birthday flight launched a career and more. Much more. Some people read books from page 1; the opening line hooks them. Others check the ending first. (If I like how it ends, I'll like getting there.) With Honey, feel free to start in the middle; pick a page any page. Chances are, you will quickly be drawn in and pulled onward from one mini-tale to the next. And at some point, you'll say Geez, let's go back and read the rest! I did. Come along for the ride. Bob makes even the shortest hop a fun trip. Richard E. Schingoethe

Performing Flight Scott Magelssen, 2020-01-01 Performing Flight sheds new light on moments in the history of US aviation and spaceflight through the lens of performance studies. From pioneering aviator Bessie Coleman to the emerging industry of space tourism, performance has consistently shaped public perception of the enterprise of flight and has guaranteed its success as a mode of entertainment, travel, research, and warfare. The book reveals fundamental connections between performance and human aviation and space travel over the past 100 years, beginning with the early aerial entertainers known as barnstormers (named after itinerant 19th century theater troupes) to the performative history of the Enola Gay and its pilot Paul Tibbets, who dropped the bomb on Hiroshima, thus ushering in the atomic age. The book also explores the phenomenon of "the pilot voice"; the creation of the American Astronaut, on whose performative success the Cold War, the Space Race, and funding of the US Space Program all depended; and the performative strategies employed to cement notions of space tourism as both manifest destiny and an escape route from a failed planet. A final chapter addresses the four hijacked flights of 9/11 and their representations in discourse and in memorials. Performing Flight effectively and imaginatively demonstrates the ways in which performance and flight in the United States have been inextricably linked for more than a century.

Optimization of Exercise Countermeasures for Human Space Flight - Lessons from Terrestrial Physiology and Operational Implementation Tobias Weber, Jonathan Paul Richard Scott, David Andrew Green, 2020-03-04 Human spaceflight has required space agencies to study and develop exercise countermeasure (CM) strategies to manage the profound, multi-system adaptation of the human body to prolonged microgravity (μ G). Future space exploration will present new challenges in terms of adaptation management that will require the attention of both exercise physiologists and operational experts. In the short to medium-term, all exploration missions will be realized using relatively small vehicles/habitats, with some exploration scenarios including surface operations in low (<1 G) gravity conditions. The evolution of CM hardware has allowed modern-day astronauts to return to Earth with, on average, relatively moderate levels μ G-induced adaptation of the musculoskeletal (MS) and cardiovascular (CV) systems. However, although the intense use of CM has attenuated many aspects of MS and CV adaptation, on an individual level, there remains wide variation in the magnitude of these changes. Innovations in CM programs have been largely engineering-driven, with new hardware providing capability for new modes of exercise and a wider

range of exercise protocols, which, in turn, has facilitated the transfer of traditional, but effective, terrestrial concepts based around high frequency resistance (multiple-set, multiple repetition) and medium intensity continuous aerobic training. As a result, International Space Station (ISS) CM specialists have focused their efforts in these domains, taking advantage of hardware innovations as and when they became available. However, terrestrial knowledge in human and exercise physiology has expanded rapidly during the lifetime of the ISS and, consequently, there is potential to optimize current approaches by re-examining terrestrial knowledge and identifying opportunities to implement this knowledge into operational practices. Current terrestrial knowledge in exercise physiology is the product of a large number of intervention studies in which the variables that contribute to the effects of physical activity (mode, frequency, duration, intensity, recovery) have been controlled and systematically manipulated. However, due to limited opportunities to perform intervention studies in both spaceflight analogues – head-down bed rest (HDBR) being considered the ‘gold standard’ – and spaceflight itself, it will not be possible to systematically investigate the contribution of these factors to the efficacy of in-flight CM. As such, it will be necessary to draw on terrestrial evidence to identify solutions/strategies that may be best suited to the constraints of exploration and prioritise specific solutions/strategies for evaluation in HDBR and in flight.

Airplane Flight in the Stratosphere Ugo De Caria, 1932 This brief survey of the problems encountered in high-altitude flight deals in particular with the need for high lift coefficient in the wings, large aspect ratios in the wings, and also the problem of hermetically sealing the cabin.

Flight Risk Forrest L. Marion, 2018-10-15 From the 1920s Afghanistan maintained a small air arm that depended heavily upon outside assistance. Starting in 2005, the United States led an air advisory campaign to rebuild the Afghan Air Force (AAF). In 2007 a formal joint/combined entity, led by a U.S. Air Force brigadier general, began air advisor work with Afghan airmen. Between 2007 and 2011, these efforts made modest progress in terms of infrastructures, personnel and aircraft accessions, and various training courses. But by 2010, advisors increasingly viewed AAF command and control (C2) as a problem area that required significant improvement if a professional air force was to be built. In the spring of 2011, major institutional changes to AAF C2 procedures were being introduced when nine U.S. air advisors were killed. The attack was the worst single-incident loss of U.S. Air Force personnel in a deployed location since 1996 and the worst insider-attack since 2001. From the day of that tragic event, the cultural chasm between Afghanistan and the West became more apparent. This dilemma continues with no end in sight to an air advisory mission of uncertain long-term value.

Space Flight Lance K. Erickson, 2010 This book offers a comprehensive look at the history of space exploration, the technology that makes it possible, and the continued efforts that promise to carry us into the future. It goes through the history of space exploration, from the earliest sub-orbital and orbital missions to today's deep-space probes, to provide a close look at past and present projects, then turns its attention to programs being planned today and to the significance of future exploration. Both the novice and the advanced student of space exploration stand to profit from the author's engaging and insightful discussion.

The History of Human Space Flight Ted Spitzmiller, 2017-02-21 Military Writers Society of America Awards, Gold Medal for History Highlighting men and women across the globe who have dedicated themselves to pushing the limits of space exploration, this book surveys the programs, technological advancements, medical equipment, and automated systems that have made space

travel possible. Beginning with the invention of balloons that lifted early explorers into the stratosphere, Ted Spitzmiller describes how humans first came to employ lifting gasses such as hydrogen and helium. He traces the influence of science fiction writers on the development of rocket science, looks at the role of rocket societies in the early twentieth century, and discusses the use of rockets in World War II warfare. Spitzmiller considers the engineering and space medicine advances that finally enabled humans to fly beyond the earth's atmosphere during the space race between the United States and the Soviet Union. He recreates the excitement felt around the world as Yuri Gagarin and John Glenn completed their first orbital flights. He recounts triumphs and tragedies, such as Neil Armstrong's one small step and the Challenger and Columbia disasters. The story continues with the development of the International Space Station, NASA's interest in asteroids and Mars, and the emergence of China as a major player in the space arena. Spitzmiller shows the impact of space flight on human history and speculates on the future of exploration beyond our current understandings of physics and the known boundaries of time and space.
