**Quality of Life Assessment: Key Issues in the 1990s** S.R. Walker,Rachel M. Rosser,2012-12-06 It was over five years ago that the Centre for Medicines Research organized a workshop entitled Quality of Life: Assessment and Application. This workshop brought together a unique group of participants, some of whom had been involved in studies on quality of life for well over a decade, whilst others were meeting the subject for the first time. This blend of experienced researchers and enthusiastic newcomers was a great stimulus to the discussions which followed individual presentations as well as that resulting from the study groups. In the ensuing publication, a balance was sought between a consideration of the complex principles underlying the assessment of quality of life and the application of such assessments to specific clinical conditions which necessitated this approach. The organization in 1991 of a second workshop entitled Quality of Life Assessment: Key Issues in the 1990s resulted in a further consideration of the quality of life philosophy, concepts and key instruments together with an update on assessing quality of life in a number of major disease areas. Of particular importance was an examination of various viewpoints concerned with ethical questions and their implications, and quality of life from industry, regulatory and health care purchasers' perspectives. As a result of this second workshop, the editors of the original book referred to above decided to produce a second edition with a number of updates and additional chapters.

**Evaluating Gas Network Capacities** Thorsten Koch,Benjamin Hiller,Marc E. Pfetsch,Lars Schewe,2015-03-17 This book deals with a simple sounding question whether a certain amount of gas can be transported by a given pipeline network. While well studied for a single pipeline, this question gets extremely difficult if we consider a meshed nation wide gas transportation network, taking into account all the technical details and discrete decisions, as well as regulations, contracts, and varying demand. This book describes several mathematical models to answer these questions, discusses their merits and disadvantages, explains the necessary technical and regulatory background, and shows how to solve this question using sophisticated mathematical optimization algorithms.--

**Energized** Edward M. Lerner,2014-09-30 Energized -- a cautionary science-based thriller by Edward M. Lerner, the acclaimed coauthor of Betrayal of Worlds No one expected the oil to last forever. How right they were.... A geopolitical miscalculation tainted the world's major oil fields with radioactivity and plunged the Middle East into chaos. Any oil that remains usable is more prized than ever. No one can build solar farms, wind farms, and electric cars quickly enough to cope. The few countries still able to export oil and natural gas—Russia chief among them—have a stranglehold on the world economy. And then, from the darkness of space, came Phoebe. Rather than divert the onrushing asteroid, America captured it in Earth orbit. Solar power satellites—cheaply mass-produced in orbit with resources mined from the new moon to beam vast amounts of power to the ground—offer America its last, best hope of avoiding servitude and economic ruin. As though building miles-across structures in space isn't challenging enough, special interests, from technophobes to eco-extremists to radio astronomers, want to stop the project. And the remaining petro powers will do anything to protect their newfound dominance of world affairs. NASA engineer Marcus Judson is determined to make the powersat demonstration project a success. And he will—even though nothing in his job description mentions combating an international cabal, or going into space to do it.

Aremac threatens to overturn the world of jurisprudence, because it can project pictures from inside the human brain. Police use Aremac to free the innocent and convict the guilty. Marna's theory imperils the entire human economic system by offering perpetual power at virtually zero cost. The entire world wants control over these inventions. They will go to any length to get them, but first they would have to defeat Tess and Marna's team of geniuses.
