You can install your own WampServer with the easy to follow instructions in this book. There are many articles and tutorials on how to build a WordPress site. In this guide I will show you how to setup a working version of a new WordPress install on your Windows 8 computer. I have designed and developed websites for 15 years. Four years ago I commenced developing websites with WordPress and it has grown phenomenally since then. In this guide I explain how to setup a WampServer on Windows 8 to run WordPress on your computer. You don't have to be a programmer or a web designer to install WordPress on your computer. I detail the process step by step for you in this guide. In this guide you will discover how to: *Setup Your Own WampServer on Windows 8 *Check Your System Type *Install WampSever with the Setup Wizard *Correctly Configure Your Installation *Setup a Database for WordPress *Configure phpMyAdmin *Setup Admin Privileges *Configure the WordPress Config.php File *Enable cURL in WampServer Why Build Your Own WampServer? Perhaps you want to test out a new theme or plugin before you post your changes live. If you install WordPress on our computer, you will essentially have a fully functional sandbox for your website. With a working version of your website on your own computer you don't have to worry about corrupting your live site as you will be making all the changes on your own computer. If you attempt to make

extensive changes or updates to your live WordPress site on your hosted server then it's possible something may break in the process. If you have plugins installed it's quite possible updating your live WordPress site could cause an error to occur and your whole site could end up off line. However, if you have a working version of your WordPress site on your computer, you can try an update and test everything out without any worries of breaking your live site.
