Comparative Atlas of Endoscopic Ear Surgery Marco Bonali, Livio Presutti, Daniele Marchioni, 2021-03-26 This unique, richly illustrated atlas offers a “how-to” reference guide to the most common and innovative endoscopic surgical procedures for the middle and inner ear, based on an ex vivo ovine model. Moreover, it compares this model to the same approaches in humans, underlying the essential surgical tips and tricks. The transcanal endoscopic approach for the management of middle and inner ear pathologies is being increasingly used, but in some countries the lack of human specimens makes adequate training in this field difficult: in response, the book introduces a novel method performed on the animal model, which allows trainees to improve their skills, while reducing the cost of surgical training. It provides a full description of specimen preparation, and comparative anatomical and radiological analyses of the human and ovine models, guides readers through the main otologic operative techniques (e.g. canalplasty, miringoplasty and ossiculoplasty) step by step, and illustrates the best approach to the internal auditory canal. Written by prominent experts in the field, this atlas serves as a unique reference resource for residents and young surgeons wishing to acquire first-hand the skills needed for endoscopic procedures and to improve their learning curves.

Rhoton's Atlas of Head, Neck, and Brain Maria Peris-Celda, Francisco Martinez-Soriano, Albert L. Rhoton, 2017-11-30 Special Features •Each anatomic

Breathtakingly stunning, this atlas is certain to be a treasured reference for medical students, residents, and clinicians specializing in neurosurgery, facial plastic surgery, otolaryngology, maxillofacial surgery, and craniofacial surgery for many years to come.--

Rhinoplasty Rollin K. Daniel, Péter Pálházi, 2018-03-22 In this atlas, sequential anatomical dissections are presented which show each component of the nose in unprecedented meticulous detail. Anatomical photographs are often paired with anatomical drawings and even intraoperative clinical photographs to illustrate each part of the nose. Rhinoplasty: An Anatomical and Clinical Atlas, provides an in-depth understanding of nasal anatomy and a wide variety of operative techniques. In rhinoplasty surgery, the surgeon must understand the tight linkage between surface aesthetics, underlying anatomy, and selection of operative techniques. The underlying anatomy is only revealed to a limited degree at the time of surgery and the surgeon must then adapt the operative plan to fit the actual anatomy observed in the operating room to achieve the patient's desired aesthetic result. Ultimately, the goal of this atlas is to allow the surgeon to see the operative techniques in both cadavers and clinical cases which represents the best possible learning approach.

Anatomical Principles of Endoscopic Sinus Surgery Renuka Bradoo, 2007-05-21
Endoscopic Sinus Surgery has progressed immensely in the last two decades. The interest in the subject and the desire to acquire proficiency in the surgical technique has led to enthusiastic attendance at numerous workshops. The introduction of motorized instruments, laser, image guided surgery etc., and the evolving concepts of the 'right way' to do the surgery are steps to making this procedure as functional as possible. However, the basic need of aspiring surgeons is still an accurate knowledge of the anatomy of the region, a three-dimensional concept, which will allow them to approach and clear disease from the narrow recesses of the nose and the paranasal sinuses and restore function to near normal. In this respect, this book, with its methodical approach and excellent illustrations, will be of immense value to all aspiring and established sinus surgeons.

The atlas will be a comprehensive practical reference for clinicians in the various specialties involved in head and neck surgery, including otolaryngologists, head and neck surgeons, plastic surgeons, maxillofacial surgeons and surgical oncologists. It will assist practitioners in achieving the high level of competence that is essential owing to the large number of vital structures in the head and neck region.
