Development of a mobile application for carpooling the elderly Mohamed Lamine Fetni,2020-03-27 Bachelor Thesis from the year 2019 in the subject Computer Science - Applied, , language: English, abstract: This thesis proposes a platform to help improve elder's mobility through carpooling, a way for car drivers to share their private vehicle with more elders in order to splitting and reducing costs. Carpooling may be one of the best solutions when there is no other mean of transportation to a specific location but naturally it is not the only one. Mobile applications take more and more part of everyone's lives, different services for carpooling with different features begin to compete with existing transportation solutions. Some people start to prefer using new carpooling services over the traditional services represented by taxi services. GoRide aims to promote carpooling by targeting elders making it easier for them to adhere and use this system. In general, people have a hard time conciliating their schedules because of the way they move from one location to another. And elders suffer from this the most especially here in Algeria since transportation between cities is not that great, As students, we think there should exist more suitable transportation solutions to places where transportation networks are short and cheap and helpful for elders. By targeting elders people will more likely join the service since its users are primarily other people form the same environment. To put the carpooling system in place, we have designed and developed an Android mobile application with backend servers for users to access the carpooling service through their smartphones, additionally the application involves some features that are critical to the service. By using Android Development Tools and Libraries and efficient backend solutions we have managed to make the application simple but powerful as well, which makes this application very useful for the young and the old to use. Our app GoRide will be a unique carpooling application that would take benefits of the advantages of carpooling and try to improve and eliminate the disadvantages, all while

focusing on making it a good carpooling experience for elders. The realization of our project will go through the conceptual phase and then development phase. Since making a good application requires good planning first.

The four value streams are: • Strategy to Portfolio • Request to Fulfill• Requirement to Deploy• Detect to CorrectEach IT Value Stream is centered on a key aspect of the service model, the essential data objects (information model), and functional components (functional model) that support it. Together, the four value streams play a vital role in helping IT control the service model as it advances through its lifecycle. The IT4IT Reference Architecture:• Provides prescriptive guidance on the specification of and interaction with a consistent service model backbone (common data model/context)• Supports real-world use-cases driven by the Digital Economy (e.g., Cloud-sourcing, Agile, DevOps, and service brokering)• Embraces and complements existing process frameworks and methodologies (e.g., ITIL®, CoBIT®, SAFe, and TOGAF®) by taking a data-focused implementation model perspective, essentially specifying an information model across the entire value chainThe audience for this standard is:• IT Professionals who are responsible for delivering services in a way that isflexible, traceable, and cost-effective• IT Professionals / Practitioners who are focused on instrumenting the ITmanagement landscape• IT Leaders who are concerned about their operating model• Enterprise Architects who are responsible for IT business transformationTopics covered include:• An introduction to the standard and the purpose of the IT4IT work• Key terminology of the standard• An introduction for executives and others introducing the IT Value Chain and IT4IT Reference Architecture concepts• IT4IT Core, which defines the structure of the IT4IT standard as well as the process and document structure used by the IT4IT standard• The Strategy to Portfolio (S2P) Value Stream• The Requirement to Deploy (R2D) Value Stream• The Request to Fulfill (R2F) Value Stream• The Detect to Correct (D2C) Value Stream• Background information on the standard.

A Survey on Today's Smartphone Usage Tobias Himmelsbach,2012-04-20 Diploma Thesis from the year 2011 in the subject Computer Science - Miscellaneous, grade: 2,3, Technical University of Berlin (Agententechnologien in betrieblichen Anwendungen), language: English, abstract: The smartphone market is evolving rapidly, irrespective of the well-known spread within the business sector. In recent years the average users tend to

replace their traditional mobile phones, PDAs and Palms with smartphones. These devices have become a pervasive part of everyday life. Dealing with huge amounts of data, the mobile device's and application's demand for certain security standards cannot be underestimated. In recent studies the individual user's needs in terms of technical features, applications etc. have not been addressed and analyzed properly. To capture the problem in its full extent it is vital to understand the user's expectations. Besides, the usage patterns have to be described especially against the background of security aspects. As mentioned before, recent analyzes did not specifically ask what the user expects from a smartphone. Hence, the main objective of this work is to get a broad picture on how smartphones are used today and what users expect, taking into consideration security aspects.. An international web-based online survey was designed and performed to measure and analyze users' behaviour when using smartphones, with the aim of finding out what they want and expect from a smartphone. The main goals were to identify user needs in the context of smartphones, to analyze their knowledge and acquisition to security aspects and to get significant data about the user's behaviour. The main findings of the survey are that on the one hand, most of the users want a smartphone to provide classic mobile phone features, such as performing phone calls, writing messages or storing contacts. On the other hand they want a smartphone to provide mobile internet access, navigation features, multimedia aspects, a comfortable usability and a good look and feel/design. The brand, price and battery performance plays a minor role for them. With respect to security aspects, most of the users have a good knowledge about security in general, pointing out that the security of the smartphone is a very important aspect for them. The obtained results can be provided as recommendations to smartphone vendors, application developers and carriers, who can use them in product portfolio management and product development

   Hybrid Routing in Delay Tolerant Networks Christoph P. Mayer,2014-07-30 This work addresses the integration of today's infrastructure-based networks with infrastructure-less networks. The resulting Hybrid Routing System allows for communication over both network types and can help to overcome cost, communication, and overload problems. Mobility aspect resulting from infrastructure-less networks are analyzed and analytical models developed. For development and deployment of the Hybrid Routing System an overlay-based framework is presented.
