The Future of Law and eTechnologies Tanel Kerikmäe,Addi Rull,2016-02-22 This book presents groundbreaking discussions on e-residency, cryptocurrencies, scams, smart contracts, 3D printing, software agents, digital evidence and e-governance at the intersection of law, legal policies and modern technologies. The reader benefits from cutting-edge analyses that offer ideas and solutions to some of the most pressing issues caused by e-technologies. This collection is a useful tool for law and IT practitioners and an inspiring source for interdisciplinary research. Besides serving as a practical guideline, this book also reflects theoretical dimensions of future perspectives, as new technologies are not meant to change common values but to accommodate them.

Electronic Government and Electronic Participation M.F.W.H.A. Janssen,F. Bannister,O. Glassey,2014-08-19 Electronic media and ICT have become indispensable in the fields of public governance, policy-making and public service provision. E-government research demonstrates its relevance to practice, influencing and shaping government strategies and implementations. The way in which technology can enable and enhance public participation in government is of particular importance. This book presents the proceedings of the ongoing research of the IFIP EGOV and ePart conferences, jointly held at Trinity College Dublin, Ireland, in September 2014. Included are 24 ongoing research papers, case studies and posters from the EGOV conference, grouped into the sections: stakeholders and participation; open data and interoperability; ICT-enabled policy-making; services; design, architecture and processes; and evaluation and public values. From the ePart conference, 5 ongoing research papers are included. The book also includes

workshops from both conferences. IFIP EGOV and ePart bring together the scientific research community in e-government from all over the world, and this book will be of interest to all those involved in public governance and service provision.

Mobile ID Device Best Practice Recommendation, Version 1. 0 Shahram Orandi,2010-10 The Mobile ID device should be viewed in the context of a portable biometric acquisition station ¿ one that is not intended to be stationary and hardwired to a much larger system used for comparing or matching biometric samples. This is in contrast to traditional booking stations and other biometric enrollment stations incorp. physically secured fullsized livescan fingerprint readers, other biometric capture devices, or photo capture stations with setups adhering to distance, lighting, and other photo capture standards. Mobile ID devices allows one to collect biometric data in remote locations. Here is a community-developed series of guidelines that will provide the required levels of interoperability for various operational scenarios. Illustrations.

Electronic Democracy in Europe Ralf Lindner,Georg Aichholzer,Leonhard

Hennen,2016-03-04 This edited book is the first of its kind to systematically address the intersection of e-democracy and European politics. It contributes to an improved understanding of the role that new media technologies play in European politics and the potential impact that Internet-based political participation processes may have on modern-day representative democracy in Europe. A unique, holistic approach is taken to examine e-democracy's current state and prospects in Europe from three, partially overlapping and interlocking perspectives: e-public, e-participation and e-voting. The authors provide both theory-inspired reflections on e-democracy's contribution to the formation of the European public sphere, as well as rich empirical analyses of contemporary e-participation phenomena such as the European Citizens' Initiative or e-voting practices in Estonia. Based on the presented findings, the concluding chapter combines a prospective outlook with recommendations for future paths towards meaningful integration of e-democracy in European politics and governance.

Digital Transformation and Public Services Anthony Larsson,Robin Teigland,2019-10-08 Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process affects various welfare services provided by the public sector, and the ensuing implications thereof. Ultimately, this book seeks to understand if it is conceivable for digital advancement to result in the creation of private/non-governmental alternatives to welfare services, possibly in a manner that transcends national boundaries. This study also investigates the possible ramifications of technological development for the public sector and the Western welfare society at large. This book takes its point of departure from the 2016 Organization

for Economic Co-operation and Development (OECD) report that targets specific public service areas in which government needs to adopt new strategies not to fall behind. Specifically, this report emphasizes the focus on digitalization of health care/social care, education, and protection services, including the use of assistive technologies referred to as digital welfare. Hence, this book explores the factors potentially leading to whether state actors could be overrun by other non-governmental actors, disrupting the current status quo of welfare services. The book seeks to provide an innovative, enriching, and controversial take on society at large and how various aspects of the public sector can be, and are, affected by the ongoing digitalization process in a way that is not covered by extant literature on the market. This book takes its point of departure in Sweden given the fact that Sweden is one of the most digitalized countries in Europe, according to the Digital Economy and Society Index (DESI), making it a pertinent research case. However, as digitalization transcends national borders, large parts of the subject matter take on an international angle. This includes cases from several other countries around Europe as well as the United States.

   Playing the Identity Card Colin J Bennett,David Lyon,2013-01-11 National identity cards are in the news. While paper ID documents have been used in some countries for a long time, today's rapid growth features high-tech IDs with built-in biometrics and RFID chips. Both long-term trends towards e-Government and the more recent responses to 9/11 have prompted the quest for more stable identity systems. Commercial pressures mix with security rationales to catalyze ID development, aimed at accuracy, efficiency and speed. New ID systems also depend on computerized national registries. Many questions

are raised about new IDs but they are often limited by focusing on the cards themselves or on privacy. Playing the Identity Card shows not only the benefits of how the state can see citizens better using these instruments but also the challenges this raises for civil liberties and human rights. ID cards are part of a broader trend towards intensified surveillance and as such are understood very differently according to the history and cultures of the countries concerned.

M-Government Mobile Technologies for Responsive Governments and Connected Societies OECD,International Telecommunication Union,2011-09-16 This report aims to foster a better understanding on how to leverage the economic and social impacts of the implementation of the Internet into mobile devices to enable ubiquitous governments, sustain public sector innovation and transform public service delivery.

Regulating eTechnologies in the European Union Tanel Kerikmäe,2014-07-10 The EU strategy 2020 includes ambitious plans for e-regulation that could improve Europe's competitiveness. However, the European states have very different legal frameworks in this field. This book introduces flagship initiatives and provides a detailed overview and analysis of the current standards and latest developments, offering practical insights and guidelines for practitioners and policy-makers alike. Further, as it discusses the main areas of e-regulation, it can serve as a useful platform for university education in light of the growing need for new kinds of specialists, i.e. IT lawyers. The book concentrates on fields that are directly affected by e-regulation such as cyber-security, databases, computer programs, e-governance, IP and competition law and informatics.

Karampelas,Vishal M. Patel,2020-06-02 The book presents novel research in the areas of social identity and security when using mobile platforms. The topics cover a broad range of applications related to securing social identity as well as the latest advances in the field, including the presentation of novel research methods that are in the service of all citizens using mobile devices. More specifically, academic, industry-related and government (law enforcement, intelligence and defence) organizations, will benefit from the research topics of this book that cover the concept of identity management and security using mobile platforms from various perspectives, i.e. whether a user navigates to social media, accesses their own phone devices, access their bank accounts, uses online shopping service providers, accesses their personal documents or accounts with valuable information, surfs the internet, or even becomes a victim of cyberattacks. In all of the aforementioned cases, there is a need for mobile related technologies that protect the users' social identity and well-being in the digital world, including the use of biometrics, cybersecurity software and tools, active authentication and identity anti-spoofing algorithms and more.

Identity and Privacy in the Internet Age Audun Jøsang,Torleiv Maseng,Svein J. Knapskog,2009-09-30 The NordSec workshops were started in 1996 with the aim of bringing together - searchers and practitioners within computer security in the Nordic countries – thereby establishing a forum for discussions and co-operation between universities, industry and computer societies. Since then, the workshop has developed into a fully fledged inter- tional information security conference, held in the Nordic countries on a round robin basis. The 14th Nordic Conference on Secure IT Systems was held in Oslo on 14-16 October 2009. Under the theme Identity and Privacy in the Internet Age, this year's conference explored policies, strategies and technologies for protecting identities and the growing flow of personal information passing through the Internet and mobile n- works under an increasingly serious threat picture. Among the contemporary security issues discussed were security services modeling, Petri nets, attack graphs, electronic voting schemes, anonymous payment schemes, mobile ID-protocols, SIM cards, n- work embedded systems, trust, wireless sensor networks, privacy, privacy disclosure regulations, financial cryptography, PIN verification, temporal access control, random number generators, and some more. As a pre-cursor to the conference proper, the Nordic Security Day on Wednesday 14 October hosted talks by leading representatives from industry, academia and the g- ernment sector, and a press conference was given.

Technology Integration and Transformation of Elections in Africa Cosmas Uchenna Nwokeafor,2017-02-22 Technology Integration and Transformation of Elections

in Africa serves as a standard textbook and a reference guide to students in both undergraduate and graduate programs in tertiary institutions where elaborate discourse on the impact of technology to political elections and advancements across the continental Africa have continued to gain weight. The rationale in publishing this textbook far more outweighs its timeliness but speaks highly of its significance because it deals with technology integration and transformation of elections in Africa, a region whose elections has been continuously marred by corruption and incessant fraudulent activities perpetrated by both the citizens, various political parties and the umpires whose responsibilities were to present a credible election. Elections in Africa draws international attention and the news is seldom good. For instance, the elections in Kenya, fueled violence that left 1,500 dead and 300,000 displaced, while elections in Zimbabwe suffered from massive fraud and brutal suppression. In Nigeria in 1999, and 2011, the result of the elections were in shambles and some of the parties that lost the election took to the street resulting in the death of significant percentage of innocent people.

    <u>The Future of Identity in the Information Society</u> Kai Rannenberg,Denis Royer,André Deuker,2009-09-29 Digitising personal information is changing our ways of identifying persons and managing relations. What used to be a natural identity, is now as virtual as a user account at a web portal, an email address, or a mobile phone number. It is subject to diverse forms of identity management in business, administration, and among citizens. Core question and source of conflict is who owns how much identity information of whom and who needs to place trust into which identity information to allow access to resources. This book presents multidisciplinary answers from research, government, and industry. Research from states with different cultures on the identification of citizens and ID cards is combined towards analysis of HighTechIDs and Virtual Identities, considering privacy, mobility, profiling, forensics, and identity related crime. FIDIS has put Europe on the global map as a place for high quality identity management research. –V. Reding, Commissioner, Responsible for Information Society and Media (EU)
