*Friction Is Fiction: the Future of Content, Media and Business* Gerd Leonhard,2009-12-05 Futurist Gerd Leonhard (www.mediafuturist.com) shares his thoughts on the Future of Content, Media and Business. 'Friction is Fiction' presents a constantly updated compilation of Gerd's best essays, writings and most popular blog posts. The central meme is that the Internet has completely disrupted the traditional notion of generating higher income by simply taking advantage of possible friction points and hurdles within transactions or business processes, i.e. by controlling the 'people formerly known as consumers'. The Future is all about winning the trust, and turning attention into revenues.PS: because of the cost of on-demand production, this 4-color version is unfortunately rather expensive (but nice); please look for the \$20 B&W version here on Lulu if you want to save some \$. Plus: if you just can't swing the few \$ for the PDF, here, just ping me via www.twitter.com/gleonhard and I will send you the link to a free, lower-resolution PDF version

**Machine Learning for Indoor Localization and Navigation** Saideep Tiku,Sudeep Pasricha,2023-06-29 While GPS is the de-facto solution for outdoor positioning with a clear sky view, there is no prevailing technology for GPS-deprived areas, including dense city centers, urban canyons, buildings and other covered structures, and subterranean facilities such as underground mines, where GPS signals are severely attenuated or totally blocked. As an alternative to GPS for the outdoors, indoor localization using machine learning is an emerging embedded and Internet of Things (IoT) application domain that is poised to reinvent the way we navigate in various indoor environments. This book discusses advances in the applications of machine learning that enable the localization and navigation of humans, robots, and vehicles in GPS-deficient environments. The book explores key challenges in the domain, such as mobile device resource limitations, device heterogeneity, environmental uncertainties, wireless signal variations, and security vulnerabilities. Countering these challenges can improve the accuracy, reliability, predictability, and energy-efficiency of indoor localization and navigation. The book identifies several novel energy-efficient, real-time, and robust indoor localization techniques that utilize emerging deep machine learning and statistical techniques to address the challenges for indoor localization and navigation. In particular, the book: Provides comprehensive coverage of the application of machine learning to the domain of indoor localization; Presents techniques to adapt and optimize machine learning models for fast, energy-efficient indoor localization; Covers design and deployment of indoor localization frameworks on mobile, IoT, and embedded devices in real conditions.

*Googling Security* Greg Conti,2008-10-10 What Does Google Know about You? And Who Are They Telling? When you use Google's "free" services, you pay, big time--with personal information about yourself. Google is making a fortune on what it knows about you...and you may be shocked by just how much Google does know. Googling Security is the first book to reveal how Google's vast information stockpiles could be used against you or your business--and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational "bread crumbs" you leave when you use Google search How Gmail could be used to track your personal network of friends, family, and acquaintances How Google's map and location tools could disclose the locations of your home, employer, family and friends, travel plans, and intentions How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed and later used for identity theft or even blackmail How the Google AdSense and DoubleClick advertising services could track you around the Web How to systematically reduce the personal information you expose or give away This book is a wake-up call and a "how-to" self-defense manual: an indispensable resource for everyone, from private citizens to security professionals, who relies on Google. **Mobile Location Services** Andrew Jagoe,2003 -- Includes case studies based on real world solution deployments with Vicinity, ATX, Ford and Hutchison 3G.-- Insights into differences between solutions for US and European marketplaces.-- Includes a software development kit for building a basic Location Service Solution.Mobile applications must be much smarter than desktop web applications. These applications need to know user's location, surroundings, and provide directions on how to get there. Developers face many challenges, including how to pinpoint the user's location, how to retrieve relevant spatial data from map databases that are often 20 Gigabytes in size, and how to support multiple clients. The mobility provided by the proliferation of wireless devices, such as Palm Pilots and onboard navigation systems presents a new class of opportunities and problems for application developers. This book provides an end-to-end solution guide to understand the issues in location-based services and build solutions that will sell. Complete with software and industry case studies, this book is an essential companion to anyone wanting to build the next killer application. The more than one million auto-based telematics terminals that have been installed by year-end 2001 are ample testimony of the opportunities and attractiveness of the mobile location services market. This large and growing installed base of subscribers also provides multiple implementation examples, which are incorporated into the text

father until now. Castro makes her promise to contact the legendary former Director of the CIA Kirk McGarvey to help her on a mysterious quest to find Cibola, the fabled seven cities of Gold. As the Cuban government unravels, Leon has to use every means at her disposal just to find the elusive McGarvey, all the while fending off men in her own Operations Division who want her job or her death. In desperation, Leon kidnaps McGarvey's closest friend, Otto Rencke, to force McGarvey's hand. Mac's meeting with Leon launches the most bizarre mission of his entire career that takes him from Cuba to Mexico City, to Spain and finally to an ancient site in New Mexico that the Spanish conquistadors called the Jornada del muerto—the Journey of Death. On the run from Cuban intelligence agents and blood thirsty Mexican drug cartel soldiers who will stop at nothing for a piece of the fabulous treasure, McGarvey struggles to decipher the truth buried in Leon's deception.
