Logic Programming David S. Warren,1993 The Tenth International Conference on Logic Programming, sponsored by the Association for Logic Programming, is a major forum for presentations of research, applications, and implementations in this important area of computer science. Logic programming is one of the most promising steps toward declarative programming and forms the theoretical basis of the programming language Prolog and its various extensions. Logic programming is also fundamental to work in artificial intelligence, where it has been used for nonmonotonic and commonsense reasoning, expert systems implementation, deductive databases, and applications such as computer-aided manufacturing. David S. Warren is Professor of Computer Science at the State University of New York, Stony Brook. Topics covered: Theory and Foundations. Programming Methodologies and Tools. Meta and Higher-order Programming. Parallelism. Concurrency. Deductive Databases. Implementations and Architectures. Applications. Artificial Intelligence. Constraints. Partial Deduction. Bottom-Up Evaluation. Compilation Techniques.

Healthcare Relationship Marketing Dr Ira J Haimowitz,2012-09-28 In recent years there have been dramatic changes in the pharmaceutical promotional landscape, affecting both consumers and healthcare professionals. One consequence of these dynamics is the need for pharmaceutical companies to plan new kinds of dialogue and relationships with their stakeholders. The evolution has been from mass-channel push marketing to two-way, multi-channel relationship marketing. Targeted Emails, webinars, mobile messages, and social networks are expanding in usage. This book is a practical overview and resource guide for the design and measurement of pharmaceutical relationship marketing (RM) programs. There are descriptions of each aspect of pharmaceutical RM design and measurement, including a running case study with follow-up exercises. The author has also conducted interviews from several pharmaceutical marketing industry experts, each having 15 years or more of working healthcare RM knowledge, and each speaking on their specific specialities. For newcomers to healthcare marketing, this book can serve as a foundation and introduction that provides framework, details, and examples of both relationship marketing designs and associated measurement disciplines. Healthcare Relationship Marketing will also be valuable to readers currently working in pharmaceutical marketing or sales who may not have exposure to the particular disciplines of relationship marketing and direct response measurement and optimization. Even for the experienced practitioner this will serve as a convenient reference that pulls together all of the program components and measurement frameworks within a single book. This book may also serve as a textbook within a university course in marketing, or a pharmaceutical business program.

Urban Systems (Routledge Revivals) C S Bertuglia,G. Leonardi,S. Occelli,G. A. Rabino,R. Tadei,Alan Wilson,2013-10-18 This edited collection, first published in 1987, provides a comparative analysis of different approaches to urban modelling, and lays the foundations for the possibility of integration and a more unified field. The first part contextualises the development of the field of urban systems modelling, focusing on the variety of approaches and possible implications of this on the future of research and methodology. Next, the editors consider economic and 'non-economic'

approaches, followed by an analysis of spatial-interaction-based approaches. Providing an overview to the field and research literature, the overarching argument is that there should be an integrated methodological approach to urban system modelling.

Design of FPGA-Based Computing Systems with OpenCL Hasitha Muthumala Waidyasooriya, Masanori Hariyama, Kunio Uchiyama, 2017-10-24

This book provides wide knowledge about designing FPGA-based heterogeneous computing systems, using a high-level design environment based on OpenCL (Open Computing language), which is called OpenCL for FPGA. The OpenCL-based design methodology will be the key technology to exploit the potential of FPGAs in various applications such as low-power embedded applications and high-performance computing. By understanding the OpenCL-based design methodology, readers can design an entire FPGA-based computing system more easily compared to the conventional HDL-based design, because OpenCL for FPGA takes care of computation on a host, data transfer between a host and an FPGA, computation on an FPGA with a capable of accessing external DDR memories. In the step-by-step way, readers can understand followings: how to set up the design environment how to write better codes systematically considering architectural constraints how to design practical applications

3D Stacked Chips Ibrahim (Abe) M. Elfadel, Gerhard Fettweis, 2016-05-11 This book explains for readers how 3D chip stacks promise to increase the level of on-chip integration, and to design new heterogeneous semiconductor devices that combine chips of different integration technologies (incl. sensors) in a single package of the smallest possible size. The authors focus on heterogeneous 3D integration, addressing some of the most important challenges in this emerging technology, including contactless, optics-based, and carbon-nanotube-based 3D integration, as well as signal-integrity and thermal management issues in copper-based 3D integration. Coverage also includes the 3D heterogeneous integration of power sources, photonic devices, and non-volatile memories based on new materials systems.

Artificial Neural Networks in Biomedicine Paulo J.G. Lisboa, Emmanuel C. Ifeakor, Piotr S. Szczepaniak, 2000-02-02 This volume provides a state-of-the-art survey of artificial neural network applications in biomedical diagnosis, laboratory data analysis and related practical areas. It looks at biomedical applications which involve customising neural network technology to resolve specific difficulties with data processing, and deals with applications relating to particular aspects of clinical practice and laboratory or medically-related analysis. Each chapter is self-contained with regard to the technology used, covering important technical points and implementation issues like the design of user interfaces and hardware/software platforms. Artificial Neural Networks in Biomedicine will be of interest to computer scientists and neural network practitioners who want to extend their knowledge of issues relevant to biomedical applications, developers of clinical computer systems, and medical researchers looking for new methods and computational tools.

Handbook of Hygiene Control in the Food Industry H. L. M. Lelieveld, John Holah, M A Mostert, 2005-10-30 Developments such as the demand for minimally-processed foods have placed a renewed emphasis on good hygienic practices in the food industry. As a result there has been a

wealth of new research in this area. Complementing Woodhead's best-selling *Hygiene in the food industry*, which reviews current best practice in hygienic design and operation, *Handbook of hygiene control in the food industry* provides a comprehensive summary of the key trends and issues in food hygiene research. Developments go fast: results of the R&D meanwhile have been applied or are being implemented as this book goes to print. Part one reviews research on the range of contamination risks faced by food processors. Building on this foundation, Part two discusses current trends in the design both of buildings and types of food processing equipment, from heating and packaging equipment to valves, pipes and sensors. Key issues in effective hygiene management are then covered in part three, from risk analysis, good manufacturing practice and standard operating procedures (SOPs) to improving cleaning and decontamination techniques. The final part of the book reviews developments in ways of monitoring the effectiveness of hygiene operations, from testing surface cleanability to sampling techniques and hygiene auditing. Like *Hygiene in the food industry*, this book is a standard reference for the food industry in ensuring the highest standards of hygiene in food production. Hygiene in Food Processing H. L. M. Lelieveld, M A Mostert, B White, John Holah, 2003-07-25 A high standard of hygiene is a prerequisite for safe food production, and the foundation on which HACCP and other safety management systems depend. Edited and written by some of the world's leading experts in the field, and drawing on the work of the prestigious European Hygienic Engineering and Design Group (EHEDG), *Hygiene in food processing* provides an authoritative and comprehensive review of good hygiene practice for the food industry. Part one looks at the regulatory context, with chapters on the international context, regulation in the EU and the USA. Part two looks at the key issue of hygienic design. After an introductory chapter on sources of contamination, there are chapters on plant design and control of airborne contamination. These are followed by a sequence of chapters on hygienic equipment design, including construction materials, piping systems, designing for cleaning in place and methods for verifying and certifying hygienic design. Part three then reviews good hygiene practices, including cleaning and disinfection, personal hygiene and the management of foreign bodies and insect pests. Drawing on a wealth of international experience and expertise, *Hygiene in food processing* is a standard work for the food industry in ensuring safe food production. Smart Agriculture Govind Singh Patel, Amrita Rai, Nripendra Narayan Das, R.P. Singh, 2021-02-11 This book endeavours to highlight the untapped potential of Smart Agriculture for the innovation and expansion of the agriculture sector. The sector shall make incremental progress as it learns from associations between data over time through Artificial Intelligence, deep learning and Internet of Things applications. The farming industry and Smart agriculture develop from the stringent limits imposed by a farm's location, which in turn has a series of related effects with respect to supply chain management, food availability, biodiversity, farmers' decision-making and insurance, and environmental concerns among others. All of the above-mentioned aspects will derive substantial benefits from the implementation of a data-driven approach under the condition that the systems, tools and techniques to be used have been designed to handle the volume and variety of the data to be gathered. Contributions to this book have been solicited with the goal of uncovering the possibilities of engaging agriculture with equipped and effective profound learning algorithms. Most agricultural research centres are already adopting Internet of Things for the monitoring of a wide range of farm services, and there are significant opportunities for agriculture administration through the effective implementation of Machine Learning, Deep Learning, Big Data and IoT structures.
