Multimedia Messaging Service Gwenaël Le Bodic, 2004-02-06 The Multimedia Messaging Service (MMS) is regarded as the best-of-the breed of proven messaging technologies, surpassing SMS and electronic mail to offer a truly multimedia experience to mobile users. The first commercial solutions appeared on the market in 2002 and the penetration rate of MMS is now quickly approaching the required level for mass-market adoption. By leveraging accessible technologies, MMS has gained wide acceptance from major market players and provides great business opportunities for the whole telecommunications industry. Introduces usage scenarios and provides a comprehensive description of enabling technologies for MMS, from version 1.0 to version 1.2 (featuring message content classes, video support, online message boxes, digital rights management, etc.) Demystifies MMS standards by clearly illustrating technical explanations with numerous practical examples, from the design of multimedia messages to the interfacing of applications with MMS centres Sheds light on common implementation pitfalls and known interoperability issues Based on the author's own experience as a standardization expert and software architect for one of the major handset vendors, Multimedia Messaging Service provides a stimulating practical reference book for network operators, content designers, device manufacturers and developers of messaging applications, and will also appeal to researchers and students.

Developing MMS Applications Scott B. Guthery, Mary J. Cronin, 2003 MMS (Multimedia Messaging Service) adds colour graphics, audio and video to today's messaging. This introduction to MMS architecture and standards contains eye-opening case studies of early MMS rollouts by content providers and mobile carriers. It features step-by-step examples of how to design and develop profitable multimedia messaging applications and includes working code that developers can use to jump-start their own projects.

Mobile Messaging Technologies and Services Gwenaël Le Bodic, 2003-06-13 Mobile messaging is practically the first data communication service in the wireless domain. It is a major advance on the conventional practice of providing only voice communication service over the wireless interface. Thus, mobile messaging is the initial step to bring the Internet to wireless terminals and has considerable importance both for mobile communication and the Internet. Mobile Messaging provides an in-depth description of messaging technologies supported by mobile networks. It covers the Short Message Service (SMS), Enhanced Messaging Service (EMS) through to the more complex and emerging Multimedia Messaging Service (MMS). The Short Message System (SMS) has proved to be incredibly popular and is supported by most GSM, TDMA and CDMA mobile networks. This volume focuses on the Short Message Service introduced by the European Telecommunications Standard Institute (ETSI) for GSM and GPRS networks. On the basis of ETSI standard, the 3rd Generation Partnership Project (3GPP) is currently the organisation responsible for maintaining the SMS technical specifications. In its most basic form, the Short Messaging Service allows users to exchange short messages composed of a limited amount of text and it is expected that up to 100 Billion short messages could be exchanged monthly by the end of 2002. The Enhanced Message Service (EMS), an application-level extension of SMS, supersedes basic SMS features by allowing elements such as images, animations, formatted text and monophonic melodies to be inserted in short or concatenated messages. Recently, the 3GPP has been focusing on the development of the Multimedia Message Service (MMS). MMS features include the exchange of messages containing polyphonic melodies, large images, video elements sometimes organised with a multimedia presentation language such as SMIL or XHTML. MMS will be supported by 2.5 G and 3G networks. MMS specifications have reached a fairly mature stage and MMS commercial solutions are appearing on the market. Unlike EMS, MMS has been specified by the 3GPP as a service independent from the underlying network technologies. In parallel to the 3GPP standardisation process, other organisations have specified network-specific implementations of MMS such as the WAP implementation defined by the WAP Forum. In order to develop applications using Short, Enhanced and Multimedia messaging technologies, engineers have to become familiar with the use of technical specifications produced by various standard development organisations such as the 3GPP, the WAP Forum and the IETF and this is the first book to pull this vast array of material together. * Provides an in depth description of the different messaging services and messaging technologies * Presents an introduction to mobile networks * Features numerous practical implementation examples * Provides a unique easy-to-follow presentation of messaging services and mobile networks within a single publication Essential reading for content providers, service providers, network operators and telecommunications manufacturers, researchers, postgraduate students, marketing and standardisation personnel.

Text and Multimedia Messaging: Emerging Issues for Congress Patricia Moloney Figliola, 2012-10-25

Email, SMS, MMS Carmen Frehner, 2008 Are email and SMS forms of writing or speech? This question cannot be answered easily because their registers are hybrid; they make use of both orality and literacy. This book offers an accurate placement of emails and text messages along the written/spoken continuum. Emails and text messages are also compared to letters and phone calls while a closer comparison of SMS and telegrams shows how far text messaging can be regarded as a renaissance of telegrams. Attention is further paid to multimedia messaging and questions concerning the proportion of image to text, picture categories as well as MMS dialogues are approached. The book finally comments on linguistic changes and deals with the German language community's concern with regard to the increasing use of Anglicisms.

MMS Daniel Ralph, Paul Graham, 2004-04-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks. It is a departure from the transport mechanism used for SMS (which is based on the GSM signalling channels) to the use of IP to transport messages within the MMS network. To this end MMS has similarities with Internet email and standard IETF protocols. As with any new technology it is difficult to accurately predict the position within the next 5 years, although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which, users will migrate onto the next wave of messaging. Significant revenue growth and data usage is expected to be driven by consumer usage of MMS. But MMS technology offers more than just a broadening of message content. With MMS, it is not only possible to send your multimedia messages from one phone to another, but also from phone to email, and vice versa. This feature dramatically increases the possibilities of mobile communication, both for private and corporate use. Multimedia messaging will reshape the landscape of mobile communication, making it more personal, more versatile, and more expressive than ever before. MMS: Is the first book to address how MMS (and the use of IP to transport messages) will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations, such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands-on experience in the implementation of MMS technology (developing, billing and delivering services) at BT, this innovative book will appeal to engineering managers, network operators, market analysts, business decision makers, content providers and operator organizations.

Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

Text and Multimedia Messaging Patricia Moloney Figliola, 2011-06-13 The number of text messages in the U.S. has grown to over 48 billion messages every month. Additionally, text messages are no longer only sent as point-to-point communications between two mobile device users. More specifically, messages are also commonly sent from web-based applications within a web browser (e.g., from an Internet e-mail address) and from instant messaging clients like AIM or MSN. Text and multimedia messaging have raised issues for Congressional policymakers. Contents of this report: Introduction; Definitions: Short Message Service; Common Short Codes (CSCs); Issues for Congress: Distracted Driving Caused By Texting; SMS Spam;

Mobile Multimedia in Action Ilpo Koskinen, 2017-07-05 Mobile Multimedia in Action displays a revealing picture of how people communicate using camera phones and other mobile multimedia devices. With such devices spreading faster than practically any other new technology, questions about how these devices are being used (and abused) to capture and distribute embarrassing or raunchy images and content, and what should be done about it, are surfacing. This volume presents the first detailed study of the use of these devices. Using a variant of social science research known as ethnomethodology, Koskinen explores the kinds of images people take with camera phones and how they use sound to enhance these images. The book asks two main questions. First, what kinds of methods of expression, such as visuals or sound, do people use when they design multimedia messages? Second, how do people interact with and respond to each other through mobile multimedia devices? Koskinen has a broader objective centering on the impact of these devices on human relationships and society at large. He asks, What do people do with these devices? Is mobile telephony moving toward a more practical direction, or will it simply become a visual chatty channel fit for gossip but not for real news or other practical purposes? What kind of social activities and organizations does it best serve - peer-to-peer networks or institutional ones? Koskinen examines these questions from three unique perspectives: the design elements of mobile multimedia, which considers methods of expression people use in designing multimedia messages; mobile multimedia as interaction, which looks into how people interact with each other using this technology and makes a case for studying multimedia as a naturally occurring activity; and mobile multimedia in society, which searches for answers as to the societal consequences of mobile multimedia usage. A groundbreaking work, Mobile Multimedia in Action will be a fascinating read for both multimedia device professionals and everyday users alike. Providing a glimpse into the future, Koskinen asks where mobile multimedia technology is taking mankind and society.

Mobile Computing Principles Reza B'Far, 2004-11-01 Written to address technical concerns that mobile developers face regardless of the platform (J2ME, WAP, Windows CE, etc.), this 2005 book explores the differences between mobile and stationary applications and the architectural and software development concepts needed to build a mobile application. Using UML as a tool, Reza B'far guides the developer through the development process, showing how to document the design and implementation of the application. He focuses on general concepts, while using platforms as examples or as possible tools. After introducing UML, XML and derivative tools necessary for developing mobile software applications, B'far shows how to build user interfaces for mobile applications. He covers location sensitivity, wireless connectivity, mobile agents, data synchronization, security, and push-based technologies, and finally homes in on the practical issues of mobile application development including the development cycle for mobile applications, testing mobile applications, architectural concerns, and a case study.

Pictures in Place Kenneth Lim, 2006-11 This study describes data that was gathered in 2004 from fieldwork conducted by students from four schools in Singapore, around tasks of wayfinding and debate. The fieldwork tasks were designed specifically to permit participants to exercise their powers of observation, as opposed to more traditional tasks of collection of empirical data. To this end, the study was constructed such that students were given opportunities to collaboratively explore and navigate unfamiliar environments using text- and picture-messaging, as well as to engage in debate, and use multimedia evidence recorded in the field to defend their positions both to peers in the field and in the classroom, regarding various issues of concern to these environments, with specific links being made to their studies in geography. The data was used to shed light on those elements in urban and suburban environments which adolescents in Singapore find geographically meaningful, as well as to determine the extent to which such interventions might augment students' spatial intelligence, with a view to informing a more effective geography education programme in schools. The nature of the collaborative discourse which emerged as participants engaged in the intervention was also investigated, using a proprietary taxonomy of discourse types. This thesis is grounded in neo-Vygotskyian socio-cultural activity theory. Primary findings include the suggestion that key elements in adolescents' local environments used to orientate and to convey spatial information are axial lines and buildings. The data also reveals differences between the genders in their preference for text over pictures in conveying such information. Adolescents who are more successful in participating in and applying spatial discourse also tend to exhibit certain habits of mind, such as perseverance, as well as to scaffold their exchanges more. Finally, the study suggests that certain fieldwork interventions can indeed augment spatial intelligence and mapping skills.
