Radio Frequency System Architecture and Design John W. M. Rogers, Calvin Plett, Ian Marsland, 2013-10-01

Communication devices such as smart phones, GPS systems, and Bluetooth, are now part of our daily lives more than ever before. As our communication equipment becomes more sophisticated, so do the radios and other hardware required to enable that technology. Common radio architectures are required to make this technology work seamlessly. This resource describes practical aspects of radio frequency communications systems design, bridging the gap between system-level design considerations and circuit-level design specifications. Industry experts not only provide detailed calculations and theory to determine block level specifications, but also discuss basic theory and operational concepts. This resource also includes extensive, up-to-date application examples.

Running Out of Water Peter Rogers, Susan Leal, 2010-08-17 Water is the world's life source and essential to all living creatures. Although we live on the blue planet, only 3 percent of all our water is drinkable. Yet we've grown accustomed to using it with abandon – individuals consume about 80 to 100 gallons per day adding up to the equivalent of an Olympic sized swimming pool every year. By this decade's end, when the world population is predicted to reach 8 billion, we will face severe shortages. In this ground breaking and forward-looking book, Harvard professor Peter Rogers and former general manager of the San Francisco Utilities Commission, Susan Leal give us a sobering perspective on the water crisis—why it's happening, where it's likely to strike, and what puts the worst strain on our supply. They explain how water's unique status as a renewable but finite resource misleads us into thinking we can always produce more of it. They introduce exciting new technologies that can help revolutionize our consumption of water and explain how different areas of the world have taken the helm in alleviating the burden of water shortages. Rogers and Leal show how it takes individuals at all levels to make this happen, from grassroots organizations who monitor their community's water sources, to local officials who plan years in advance how they will appropriate water, to the national government who can invest in infrastructure for water conservation today. Informed and inspiring, *Running out of Water* is a clarion call for action and an innovative look at how we as a nation and individuals can confront the crisis.

The Rise of the Arab American Left Pamela E. Pennock, 2017-02-07 In this first history of Arab American activism in the 1960s, Pamela Pennock brings to the forefront one of the most overlooked minority groups in the history of American social movements. Focusing on the ideas and strategies of key Arab American organizations and examining the emerging alliances between Arab American and other anti-imperialist and antiracist movements, Pennock sheds new light on the role of Arab Americans in the social change of the era. She details how their attempts to mobilize communities in support of Middle Eastern political or humanitarian causes were often met with suspicion by many Americans, including heavy surveillance by the Nixon administration. Cognizant that they would be unable to influence policy by traditional electoral means, Arab Americans, through slow coalition building over the course of decades of activism, brought their central policy concerns and causes into the mainstream of activist consciousness. With the support of new archival and interview evidence, Pennock situates the civil rights struggle of Arab Americans within the story of other political and social change of the 1960s and 1970s. By doing so, she takes a crucial step forward in the study of American social movements of that era.

Diffusion of Innovations, 5th Edition Everett M. Rogers, 2003-08-16 Now in its fifth edition, *Diffusion of Innovations* is a classic work on the spread of new ideas. In this renowned book, Everett M. Rogers, professor and chair of the Department of Communication & Journalism at the University of New Mexico, explains how new ideas spread via communication channels over time. Such innovations are initially perceived as uncertain and even risky. To overcome this uncertainty, most people seek out others like themselves who have already adopted the new idea. Thus the diffusion process consists of a few individuals who first adopt an innovation, then spread the word among their circle of acquaintances—a process which typically takes months or years. But there are exceptions: use of

the Internet in the 1990s, for example, may have spread more rapidly than any other innovation in the history of humankind. Furthermore, the Internet is changing the very nature of diffusion by decreasing the importance of physical distance between people. The fifth edition addresses the spread of the Internet, and how it has transformed the way human beings communicate and adopt new ideas.
