  Artificial Intelligence as a Disruptive Technology Rosario Girasa,2020-01-11 Artificial intelligence (AI) is the latest technological evolution which is transforming the global economy and is a major part of the "Fourth Industrial Revolution." This book covers the meaning, types, subfields and applications of AI, including U.S. governmental policies and regulations, ethical and privacy issues, particularly as they pertain and affect facial recognition programs and the Internet-of Things (IoT). There is a lengthy analysis of bias, AI's effect on the current and future job market, and how AI precipitated fake news. In addition, the text covers basics of intellectual property rights and how AI will transform their protection. The author then moves on to explore international initiatives from the European Union, China's New Generation Development Plan, other regional areas, and international conventions. The book concludes with a discussion of super intelligence and the question and applicability of consciousness in machines. The interdisciplinary scope of the text will appeal to any scholars, students and general readers interested in the effects of AI on our society, particularly in the fields of STS, economics, law and politics.

  Intellectual Property Rights and Competition in Standard Setting Valerio Torti,2015-10-05 Competition and intellectual property rights (IPRs) are both necessary for a market to work efficiently and to promote consumer welfare. Properly applied, intellectual property rules define a legal framework which allows undertakings to profit from their inventions. This in turn encourages competition among firms and enhances dynamic efficiency, to the benefit of consumer welfare. Standard setting represents one of the fields where the interaction between competition law and IPRs clearly comes to light. The collaborative goal of standard setting organizations (SSOs) is to adopt and promote standards that either do not conflict with anyone's right or, if they do, are developed under condition that patents are licensed under defined terms. This book examines the tension between IPRs and competition in the standard setting field which can arise when innovators over-exploit the rights they have been granted and hold up an entire industry. The book compares EU and U.S. jurisdictions with a particular focus on the IT and telecommunication sectors. It scrutinizes those practices which could harm standard setting and its goals, looking at misleading conducts by SSOs' members which may lead to breach the EU and U.S. antitrust provisions on abuse of market power. Recent developments in EU and U.S. standard setting are analysed highlighting the differences in enforcement approaches. The book considers how the optimal balance between IPRs and industry standards can be struck, suggesting a policy model which takes into account both innovators' interests and SSOs' goals.
