Data Science and Predictive Analytics Ivo D. Dinov,2023-02-16 This textbook integrates important

mathematical foundations, efficient computational algorithms, applied statistical inference techniques, and cutting-edge machine learning approaches to address a wide range of crucial biomedical informatics, health analytics applications, and decision science challenges. Each concept in the book includes a rigorous symbolic formulation coupled with computational algorithms and complete end-to-end pipeline protocols implemented as functional R electronic markdown notebooks. These workflows support active learning and demonstrate comprehensive data manipulations, interactive visualizations, and sophisticated analytics. The content includes open problems, state-of-the-art scientific knowledge, ethical integration of heterogeneous scientific tools, and procedures for systematic validation and dissemination of reproducible research findings. Complementary to the enormous challenges related to handling, interrogating, and understanding massive amounts of complex structured and unstructured data, there are unique opportunities that come with access to a wealth of feature-rich, high-dimensional, and time-varying information. The topics covered in Data Science and Predictive Analytics address specific knowledge gaps, resolve educational barriers, and mitigate workforce information-readiness and data science deficiencies. Specifically, it provides a transdisciplinary curriculum integrating core mathematical principles, modern computational methods, advanced data science techniques, model-based machine learning, model-free artificial intelligence, and innovative biomedical applications. The book's fourteen chapters start with an introduction and progressively build foundational skills from visualization to linear modeling, dimensionality reduction, supervised classification, black-box machine learning techniques, qualitative learning methods, unsupervised clustering, model performance assessment, feature selection strategies, longitudinal data analytics, optimization, neural networks, and deep learning. The second edition of the book includes additional learning-based strategies utilizing generative adversarial networks, transfer

learning, and synthetic data generation, as well as eight complementary electronic appendices. This textbook is suitable for formal didactic instructor-guided course education, as well as for individual or team-supported self-learning. The material is presented at the upper-division and graduate-level college courses and covers applied and interdisciplinary mathematics, contemporary learning-based data science techniques, computational algorithm development, optimization theory, statistical computing, and biomedical sciences. The analytical techniques and predictive scientific methods described in the book may be useful to a wide range of readers, formal and informal learners, college instructors, researchers, and engineers throughout the academy, industry, government, regulatory, funding, and policy agencies. The supporting book website provides many examples, datasets, functional scripts, complete electronic notebooks, extensive appendices, and additional materials.

Finna Nate Marshall,2020-08-11 Sharp, lyrical poems celebrating the Black vernacular—its influence on pop culture, its necessity for familial survival, its rite in storytelling and in creating the safety found only within its intimacy "Terrific . . . illuminates life in this country in a strikingly original way."—Ron Charles, The Washington Post NAMED ONE OF THE BEST BOOKS OF THE YEAR

BY NPR • The New York Public Library • Tordotcom Definition of finna, created by the author: fin·na /ˈfinə/ contraction: (1) going to; intending to [rooted in African American Vernacular English] (2) eye dialect spelling of "fixing to" (3) Black possibility; Black futurity; Blackness as tomorrow These poems consider the brevity and disposability of Black lives and other oppressed people in our current era of emboldened white supremacy, and the use of the Black vernacular in America's vast reserve of racial and gendered epithets. Finna explores the erasure of peoples in the American narrative; asks how gendered language can provoke violence; and finally, how the Black vernacular, expands our notions of possibility, giving us a new language of hope: nothing about our people is romantic & it shouldn't be. our people deserve poetry without meter. we deserve our own jagged rhythm & our own uneven walk towards sun. you make happening happen. we happen to love. this is our greatest action.
