Pirate Cinema Cory Doctorow, 2012-10-02 From the New York Times bestselling author of *Little Brother*, Cory Doctorow, comes *Pirate Cinema*, a new tale of a brilliant hacker runaway who finds himself standing up to tyranny. Trent McCauley is sixteen, brilliant, and obsessed with one thing: making movies on his computer by reassembling footage from popular films he downloads from the net. In the dystopian near-future Britain where Trent is growing up, this is more illegal than ever; the punishment for being caught three times is that your entire household's access to the internet is cut off for a year, with no appeal. Trent's too clever for that to happen. Except it does, and it nearly destroys his family. Shamed and shattered, Trent runs away to London, where he slowly learns the ways of staying alive on the streets. This brings him in touch with a demimonde of artists and activists who are trying to fight a new bill that will criminalize even more harmless internet creativity, making felons of millions of British citizens at a stroke. Things look bad. Parliament is in power of a few wealthy media conglomerates. But the powers-that-be haven't entirely reckoned with the power of a gripping movie to change people's minds.... At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Dead Astronauts Jeff VanderMeer, 2019-12-03 A 2020 LOCUS AWARD FINALIST Jeff VanderMeer's *Dead Astronauts* presents a City with no name of its own where, in the shadow of the all-powerful Company, lives human and otherwise converge in terrifying and miraculous ways. At stake: the fate of the future, the fate of Earth—all the Earths. A messianic blue fox who slips through warrens of time and space on a mysterious mission. A

homeless woman haunted by a demon who finds the key to all things in a strange journal. A giant leviathan of a fish, centuries old, who hides a secret, remembering a past that may not be its own. Three ragtag rebels waging an endless war for the fate of the world against an all-powerful corporation. A raving madman who wanders the desert lost in the past, haunted by his own creation: an invisible monster whose name he has forgotten and whose purpose remains hidden.

Destination Normandy G. H. Bennett, 2009-04-20 A cross-section of the American experience on D-Day Unique perspective from the regimental level that also integrates strategic and tactical considerations Stories of largely forgotten acts of valor G. H. Bennett collects oral histories from the soldiers of three American regiments and weaves them into an intimate account of the D-Day invasion of June 6, 1944. Widely scattered during its drop into Normandy, the 507th Parachute Infantry Regiment (82nd Airborne Division) stopped the advance of an SS division. The untested 116th Infantry Regiment (29th Infantry Division) landed on bloody Omaha Beach, where it suffered more casualties than any other regiment that day. Meanwhile, the 22nd Infantry Regiment (4th Infantry Division) easily waded ashore on Utah

Beach but faced savage fighting as it moved inland.

VLSI Physical Design: From Graph Partitioning to Timing Closure Andrew B. Kahng, Jens Lienig, Igor L. Markov, Jin Hu, 2011-01-27 Design and optimization of integrated circuits are essential to the creation of new semiconductor chips, and physical optimizations are becoming more prominent as a result of

semiconductor scaling. Modern chip design has become so complex that it is largely performed by specialized software, which is frequently updated to address advances in semiconductor technologies and increased problem complexities. A user of such software needs a high-level understanding of the underlying mathematical models and algorithms. On the other hand, a developer of such software must have a keen understanding of computer science aspects, including algorithmic performance bottlenecks and how various algorithms operate and interact. VLSI Physical Design: From Graph Partitioning to Timing Closure introduces and compares algorithms that are used during the physical design phase of integrated-circuit design, wherein a geometric chip layout is produced starting from an abstract circuit design. The emphasis is on essential and fundamental techniques, ranging from hypergraph partitioning and circuit placement to timing closure.

Application of Evolutionary Algorithms for Multi-objective Optimization in VLSI and Embedded Systems M.C.

Bhuvaneswari, 2014-08-20 This book describes how evolutionary algorithms (EA), including genetic algorithms (GA) and particle swarm optimization (PSO) can be utilized for solving multi-objective optimization problems in the area of embedded and VLSI system design. Many complex engineering optimization

problems can be modelled as multi-objective formulations. This book provides an introduction to multi-objective optimization using meta-heuristic algorithms, GA and PSO and how they can be applied to problems like hardware/software partitioning in embedded systems, circuit partitioning in VLSI, design of operational amplifiers in analog VLSI, design space exploration in high-level synthesis, delay fault testing in VLSI testing and scheduling in heterogeneous distributed systems. It is shown how, in each case, the various aspects of the EA, namely its representation and operators like crossover, mutation, etc, can be separately formulated to solve these problems. This book is intended for design engineers and researchers in the field of VLSI and embedded system design. The book introduces the multi-objective GA and PSO in a simple and easily understandable way that will appeal to introductory readers.

Machine Learning in Insurance Jens Perch

Nielsen,Alexandru Asimit, Ioannis Kyriakou,2020-12-02 Machine learning is a relatively new field, without a unanimous definition. In many ways, actuaries have been machine learners. In both pricing and reserving, but also more recently in capital modelling, actuaries have combined statistical methodology with a deep understanding of the problem at hand and how any solution may affect the company and its customers. One aspect that has, perhaps, not been so well developed among actuaries is validation. Discussions among actuaries' "preferred methods" were often without solid scientific arguments, including validation of the case at hand. Through this collection, we aim to promote a good practice of machine learning in insurance, considering the following three key issues: a) who is the client, or sponsor, or otherwise interested real-life target of the study? b) The reason for working with a particular data set and a clarification of the available extra knowledge, that we also call prior knowledge, besides the data set alone. c) A mathematical statistical argument for the validation procedure.

Warriors of Ultramar Graham McNeill, 2015-05 In the cold darkness of space, the voracious alien tyranids travel from world to world, consuming all in a futile attempt to slake their hunger for bio-matter. Lying directly in their path is the industrial planet Tarsis Ultra, where Captain Uriel Ventris and the Ultramarines of Fourth Company stand shoulder to shoulder with their battle-brothers from the Mortifactors Chapter. As war rages and the situation looks bleak, Uriel must accept the barbaric traditions of his allies and act against the ancient tactics laid down in the holy Codex Astartes if there is to be any chance of destroying the alien menace.
