*Mobile Applications* Tejinder S. Randhawa, 2022-08-17 Using Android as a reference, this book teaches the development of mobile apps designed to be responsive, trustworthy and robust, and optimized for maintainability. As the share of mission-critical mobile apps continues to increase in the ever-expanding mobile app ecosystem, it has become imperative that processes and procedures to assure their reliance are developed and included in the software life cycle at opportune times. Memory, CPU, battery life and screen size limitations of smartphones coupled with volatility associated with mobile environments underlines that the quality assurance strategies that proved to be successful for desktop applications may no longer be effective in mobile apps. To that effect, this book lays a foundation upon which quality assurance processes and procedures for mobile apps could be devised. This foundation is composed of analytical models, experimental test-beds and software solutions. Analytical models proposed in the literature to predict software quality are studied and adapted for mobile apps. The efficacy of these analytical models in prejudging the operations of mobile apps under design and development is evaluated. A comprehensive test suite is presented that empirically assesses a mobile app's compliance to its quality expectations. Test procedures to measure quality attributes such as maintainability, usability, performance, scalability, reliability, availability and security, are detailed. Utilization of test tools provided in Android Studio as well as third-party vendors in constructing the corresponding test-beds is highlighted. An in-depth exploration of utilities, services and frameworks available on Android is conducted, and the results of their parametrization observed through experimentation to construct quality assurance solutions are presented. Experimental development of some example mobile apps is conducted to gauge adoption of process models and determine favorable opportunities for integrating the quality assurance processes and procedures in the mobile app life cycle. The role of automation in testing, integration, deployment and configuration management is demonstrated to offset cost overheads of integrating quality assurance process in the life cycle of mobile apps.

**Distributed Real-Time Architecture for Mixed-Criticality Systems** Hamidreza Ahmadian, Roman Obermaisser, Jon Perez, 2018-09-05 This book describes a cross-domain architecture and design tools for networked complex systems where application subsystems of different criticality coexist and interact on networked multi-core chips. The architecture leverages multi-core platforms for a hierarchical system perspective of mixed-criticality applications. This system perspective is realized by virtualization to establish security, safety and real-time performance. The impact further includes a reduction of time-to-market, decreased development, deployment and maintenance cost, and the exploitation of the economies of scale through cross-domain components and tools. Describes an end-to-end architecture for hypervisor-level, chip-level, and cluster level. Offers a solution for different types of resources including processors, on-chip communication, off-chip communication, and I/O. Provides a cross-domain approach with examples for wind-power, health-care, and avionics. Introduces hierarchical adaptation strategies for mixed-criticality systems. Provides modular verification and certification methods for the seamless integration of mixed-criticality systems. Covers platform technologies, along with a methodology for the development process. Presents an experimental evaluation of technological results in cooperation with industrial partners. The information in this book will be extremely useful to

industry leaders who design and manufacture products with distributed embedded systems in mixed-criticality use-cases. It will also benefit suppliers of embedded components or development tools used in this area. As an educational tool, this material can be used to teach students and working professionals in areas including embedded systems, computer networks, system architecture, dependability, real-time systems, and avionics, wind-power and health-care systems.

**Grown** Matthew B., 2010-11-15 "The Thriller 'Grown' plays somehow at a lot of dark places all around the globe, but mainly in Zurich. Marcus started the whole thing, he's a Hacker, who started to write a blog with the center children and/or pedophilia. He is a lonely person, who does really chat with a female Yakuza tween, if she didn't lied at him about this. About the blog became he somekind of myth among some ranges of the Internet. He really screws pedophilia through his mind and the output is this blog, in that even Intercops is interested. As he drifts through the 'spaces' of the Internet and how he does see through this spaces dark places, does he slowly reach a center of pedophilia. It's the 'conspiracy free child sex', where even some companies are conducted. But specially the company MMM catches his sight... After a while, did even a few of the folks of the 'System Terrorists Underground' read this blog and they done the decision, 'fully system tear down of the company MMM and its conductedness'... Just cause child rape is illegal... Or just cause some still didn't forgot their childhood nightmares... Matthias Bärlocher

Energiefresser Internet Jörg Schieb, 2023-10-22 Digitalexperter Jörg Schieb deckt einen meist ignorierten Aspekt der Digitalisierung auf – deren enorme Belastung für unser Klima. Und er erläutert, was wir dagegen tun können, ohne gleich offline zu gehen. Während Ernährung, Mobilität oder Bekleidung beim Klimaschutz schon lange eine Rolle spielen, findet einer der größten Energiefresser unserer Zeit meist überhaupt keine Beachtung: die Digitalisierung. So verbraucht etwa der Bitcoin so viel Energie wie ganz Schweden. Die Nutzung des Internets – von der Suchanfrage in Google bis hin zum Streaming der Lieblingsserie – ist immer auch eine Belastung für das Klima. In Zeiten von Klimakrise und Energieknappheit ist es umso wichtiger, einen kritischen Blick auf den Energieverbrauch unseres digitalen Lebens zu werfen. Digitalexperter Jörg Schieb erklärt mit unterhaltsamen Fakten, wie das Internet so viel Energie frisst. Er klärt nicht nur auf, was sich hier politisch ändern muss, sondern gibt uns Verbrauchern konkrete Empfehlungen mit an die Hand, wie wir schon mit kleinsten Änderungen unserer Gewohnheiten dazu beitragen können, unser Internet klimafreundlicher und nachhaltiger zu gestalten.
