Bob Burns, Mike Burns

Designing Web Navigation James Kalbach, 2007-08-28 Thoroughly rewritten for today's web environment, this bestselling book offers a fresh look at a fundamental topic of web site development: navigation design. Amid all the changes to the Web in the past decade, and all the hype about Web 2.0 and various rich interactive technologies, the basic problems of creating a good web navigation system remain. *Designing Web Navigation* demonstrates that good navigation is not about technology—it's about the ways people find information, and how you guide them. Ideal for beginning to intermediate web designers, managers, other non-designers, and web development pros looking for another perspective, *Designing Web Navigation* offers basic design principles, development techniques and practical advice, with real-world examples and essential concepts seamlessly folded in. How does your web site serve your business objectives? How does it meet a user's needs? You'll learn that navigation design touches most other aspects of web site development. This book: Provides the foundations of web navigation and offers a framework for navigation design Paints a broad picture of web navigation and basic human information behavior Demonstrates how navigation reflects brand and affects site credibility Helps you understand the problem you're trying to solve before you set out to design Thoroughly reviews the mechanisms and different types of navigation Explores information scent and information shape Explains persuasive architecture and other design concepts Covers special contexts, such as navigation design for web applications Includes an entire chapter on tagging While *Designing Web Navigation* focuses on creating navigation systems for large, information-rich sites serving a business purpose, the principles and techniques in the book also apply to small sites.

Well researched and cited, this book serves as an excellent reference on the topic, as well as a superb teaching guide. Each chapter ends with suggested reading and a set of questions that offer exercises for experiencing the concepts in action.

Wilderness Navigation Bob Burns, Mike Burns, 2012-12-20 * GPS chapter completely updated to reflect newer models and features of GPS receivers now available * Expanded to include a section on route finding on glaciers, along with additional information on changing declination * Extensive illustrated examples of orientation and wilderness navigation Proceed with confidence when heading off-road or off-trail with the second edition of *Wilderness Navigation*. Whether you are climbing a glacier, orienteering in the backcountry, or on an easy day hike, Mike and Bob Burns cover all the latest technology and time-tested methods to help you learn to navigate—from how to read a map to compasses and geomagnetism. Bob Burns is a long-time member of The Mountaineers. He has taught classes in the use of map and compass since the late 1970s. Mike Burns is an avid climber. He has instructed climbing and navigation classes, and written articles for *Climbing* magazine. Part of the *The Mountaineers Outdoor Basics* series! Created for beginning-to-intermediate enthusiasts, this series includes everything anyone would need to know about staying safe and having fun in the backcountry.

Time and Navigation Andrew Kenneth Johnston, Roger Connor, Carlene E. Stephens, Paul E. Ceruzzi, 2015 If you want to know where you are, you need a good clock. The surprising connection between time and place is explored in *Time and Navigation—The Untold Story of Getting from Here to There*, the companion book to the National Air and Space Museum exhibition of the same

name. Today we use smartphones and GPS, but navigating has not always been so easy. The oldest clock is Earth itself, and the oldest means of keeping time came from observing changes in the sky. Early mariners like the Vikings accomplished amazing feats of navigation without using clocks at all. Pioneering seafarers in the Age of Exploration used dead reckoning and celestial navigation; later innovations such as sextants and marine chronometers honed these techniques by measuring latitude and longitude. When explorers turned their sights to the skies, they built on what had been learned at sea. For example, Charles Lindbergh used a bubble sextant on his record-breaking flights. World War II led to the development of new flight technologies, notably radio navigation, since celestial navigation was not suited for all-weather military operations. These forms of navigation were extended and enhanced when explorers began guiding spacecraft into space and across the solar system. Astronauts combined celestial navigation technology with radio transmissions. The development of the atomic clock revolutionized space flight because it could measure billionths of a second, thereby allowing mission teams to navigate more accurately. Scientists and engineers applied these technologies to navigation on earth to develop space-based time and navigation services such as GPS that is used every day by people from all walks of life. While the history of navigation is one of constant change and innovation, it is also one of remarkable continuity. Time and Navigation tells the story of navigation to help us understand where we have been and how we got there so that we can understand where we are going.

Navigation for the Amateur Edmund T. Morton, 1918

The Natural Navigator Tristan Gooley, 2012-06-05 From the New York Times—bestselling author of *The Secret World of Weather* and *The Lost Art of Reading Nature's Signs*, learn to tap into nature and notice the hidden clues all around you Before GPS, before the compass, and even before cartography, humankind was navigating. Now this singular guide helps us rediscover what our ancestors long understood—that a windswept tree, the depth of a puddle, or a trill of birdsong can help us find our way, if we know what to look and listen for. Adventurer and navigation expert Tristan Gooley unlocks the directional clues hidden in the sun, moon, stars, clouds, weather patterns, lengthening shadows, changing tides, plant growth, and the habits of wildlife. Rich with navigational anecdotes collected across ages, continents, and cultures, *The Natural Navigator* will help keep you on course and open your eyes to the wonders, large and small, of the natural world.

Global Positioning Systems, Inertial Navigation, and Integration Mohinder S. Grewal, Lawrence R. Weill, Angus P. Andrews, 2004-04-05 The only comprehensive guide to Kalman filtering and its applications to real-world GPS/INS problems Written by recognized authorities in the field, this book provides engineers, computer scientists, and others with a working familiarity with the theory and contemporary applications of Global Positioning Systems (GPS), Inertial Navigational Systems, and Kalman filters. Throughout, the focus is on solving real-world problems, with an emphasis on the effective use of state-of-the-art integration techniques for those systems, especially the application of Kalman filtering. To that end, the authors explore the various subtleties, common failures, and inherent limitations of the theory as it applies to real-world situations, and provide numerous detailed application

examples and practice problems, including GPS-aided INS, modeling of gyros and accelerometers, and WAAS and LAAS. Drawing upon their many years of experience with GPS, INS, and the Kalman filter, the authors present numerous design and implementation techniques not found in other professional references, including original techniques for:

- * Representing the problem in a mathematical model
- * Analyzing the performance of the GPS sensor as a function of model parameters
- * Implementing the mechanization equations in numerically stable algorithms
- * Assessing computation requirements
- * Testing the validity of results
- * Monitoring GPS, INS, and Kalman filter performance in operation

In order to enhance comprehension of the subjects covered, the authors have included software in MATLAB, demonstrating the workings of the GPS, INS, and filter algorithms. In addition to showing the Kalman filter in action, the software also demonstrates various practical aspects of finite word length arithmetic and the need for alternative algorithms to preserve result accuracy. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Inner Navigation Erik Jonsson, 2002 A FASCINATING INVESTIGATION OF HOW WE NAVIGATE THE PHYSICAL WORLD, INNER NAVIGATION IS A LIVELY, ENGAGING ACCOUNT OF SUBCONSCIOUS MAPMAKING. Why are we so often disoriented when we come up from the subway? Do we really walk in circles when we lose our bearings in the wilderness? How -- and why -- do we get lost at all? In this surprising, stimulating book, Erik Jonsson, a Swedish-born engineer who has spent a lifetime exploring navigation over every terrain, from the crowded cities of Europe to the emptiness of the desert, gives readers extraordinary new insights into the human way-finding system. Written for the nonscientist, Inner Navigation explains the astonishing array of physical and psychological

cues the brain uses to situate us in space and build its cognitive maps -- the subconscious maps it employs to organize landmarks. Humans, Jonsson explains, also possess an intuitive direction frame -- an internal compass -- that keeps these maps oriented (when it functions properly) and a dead-reckoning system that constantly updates our location on the map as we move through the world. Even the most

NOLS Wilderness Navigation Darran Wells, 2013 *NOLS Wilderness Navigation* gives you the skills you need to confidently find your way on and off the trail. Whether you are learning to use a map and compass or exploring the latest technology, this easy-to-follow guide is packed with essential information.

Dark and Magical Places: The Neuroscience of Navigation Christopher Kemp, 2022-01-25 How the brain helps us to understand and navigate space--and why, sometimes, it doesn't work the way it should. Inside our heads we carry around an infinite and endlessly unfolding map of the world. Navigation is one of the most ancient neural abilities we have--older than language. In *Dark and Magical Places*, Christopher Kemp embarks on a journey to discover the remarkable extent of what our minds can do. Fueled by his own spatial shortcomings, Kemp describes the brain regions that orient us in space and the specialized neurons that do it. Place cells. Grid cells. He examines how the brain plans routes, recognizes landmarks, and makes sure we leave a room through a door instead of trying to leave through a painting. From the secrets of supernavigators like the indigenous hunters of the Bolivian rainforest to the confusing environments inhabited by people with place blindness, Kemp charts the myriad ways in which we find our way and explains the cutting-edge neuroscience behind them. How did Neanderthals navigate? Why

do even seasoned hikers stray from the trail? What spatial skills do we inherit from our parents? How can smartphones and our reliance on GPS devices impact our brains? In engaging, engrossing language, Kemp unravels the mysteries of navigating and links the brain's complex functions to the effects that diseases like Alzheimer's, types of amnesia, and traumatic brain injuries have on our perception of the world around us. A book for anyone who has ever felt compelled to venture off the beaten path, *Dark and Magical Places* is a stirring reminder of the beauty in losing yourself to your surroundings. And the beauty in understanding how our brains can guide us home.

Practical Navigation for the Modern Boat Owner Pat Manley, 2008-04-14 The modern sailor is an electronic navigator. New boats come stacked with GPS, chartplotters and radar, on a bewildering array of screens and displays. With this book learn how to navigate using all of these electrical devices. *Practical Navigation* leads you through all the aspects of boat navigation in a logical order, using a combination of modern and traditional methods. This practical approach ensures that although modern electronic methods remain at the forefront, readers will never lack in knowledge to navigate their boat safely in any circumstance. Topics covered include GPS, the shape of the Earth, finding your position, passage planning, radar and personal computers.

Where Am I? A.G. Smith, 2022-10-01T00:00:00-04:00 If you want to find your place on Earth, where must you look? Who were the first ancient mapmakers? What is the Chinese south-pointing carriage? How did Christianity influence mapmaking? *Where Am I?* is the fascinating story of how people began to chart the physical world and their place in it. Richly illustrated with meticulous drawings, it takes readers on a journey of their own. From Babylonia to

Scandinavia, North America to China, Greece to Polynesia, ingenious methods and inventions will delight all those who marvel at the human spirit of adventure and ties to home.

Navigation in the Mountains Carlo Forte, 2014-04-28 Navigation in the Mountains - The Definitive Guide for Hill Walkers, Mountaineers & Leaders is the official navigation book for all Mountain Training schemes. Packed with essential information and techniques, this handbook is split into sections including: all aspects of mountain navigation; the additional techniques required in winter; adaptations in navigation techniques for use overseas; the use of GPS; digital mapping; and the teaching of navigation. This book is the reference tool for all walkers who wish to maintain or improve their navigation techniques as well as containing specific ideas for anyone wanting to help teach and lead others. Its functional design with easy reference colour coded pages, striking illustrations that complement the text and inspiring photographs make this book an indispensable guide. It is the fourth in a series of manuals and has been written and compiled by Carlo Forte, the Chief Instructor at the National Mountain Centre, Plas y Brenin, and it is published by Mountain Training UK.

The New American Practical Navigator Jonathan Ingersoll Bowditch, 1848
Basic Coastal Navigation Frank J. Larkin, 1998 This clear and accessible introduction to coastal navigation outlines most of the techniques of piloting that are still fundamental to safe navigation even with modern electronic aids. Step-by-step, the reader is guided from simple to more complex piloting solutions. In addition to dead-reckoning techniques, the author covers tides and currents and explains how to use LORAN C and GPS. There are numerous illustrations throughout the text and practice problems at

the end of each chapter. Key Advantages: fully updated new edition, perfect for sail and power, clear layout and instructions, comprehensive overage of all aspects of coastal navigation, review questions and answers, and suitable for self-study and Coast Guard or other similar courses.

Aerospace Navigation Systems Alexander V. Nebylov, Joseph Watson, 2016-05-24
Compiled by leading authorities, *Aerospace Navigation Systems* is a compendium of chapters that present modern aircraft and spacecraft navigation methods based on up-to-date inertial, satellite, map matching and other guidance techniques. Ranging from the practical to the theoretical, this book covers navigational applications over a wide range of aerospace vehicles including aircraft, spacecraft and drones, both remotely controlled and operating as autonomous vehicles. It provides a comprehensive background of fundamental theory, the utilisation of newly-developed techniques, incorporates the most complex and advanced types of technical innovation currently available and presents a vision for future developments. *Satellite Navigation Systems* (SNS), long range navigation systems, short range navigation systems and navigational displays are introduced, and many other detailed topics include *Radio Navigation Systems* (RNS), *Inertial Navigation Systems* (INS), *Homing Systems*, *Map Matching* and other correlated-extremalsystems, and both optimal and sub-optimal filtering in integrated navigation systems.
