Model Driven Architecture - Foundations and Applications Ina Schieferdecker,Alan Hartman,2008-06-06 The fourth edition of the European Conference on Model-Driven Architecture - Foundations and Applications (ECMDA-FA 2008) was dedicated to

furthering the state of knowledge and fostering the industrialization of the model-driven architecture (MDA) methodology. MDA is an initiative proposed by the Object Management Group (OMG) for platform-generic software development. It promotes the use of models in the specification, design, analysis, synthesis, deployment, and evolution of complex software systems. ECMDA-FA 2008 focused on engaging key European and international researchers and practitioners in a dialogue which will result in a stronger, more efficient industry, producing more reliable software on the basis of state-of-the-art research results. ECMDA-FA is a forum for exchanging information, discussing the latest results and arguing about future developments of MDA. It is a pleasure to be able to introduce the proceedings of ECMDA-FA 2008. ECMDA-FA addresses various MDA areas including model management, executable models, concrete syntaxes, aspects and concerns, validation and testing, model-based systems engineering, model-driven development and service-oriented architectures, and the application of model-driven development. There are so many people who deserve warm thanks and gratitude. The fruitful collaboration of the Organization, Steering and Program Committee members and the vibrant community led to a successful conference: ECMDA-FA 2008 obtained excellent results in terms of submissions, program size, and attendance. The Program Committee accepted, with the help of additional reviewers, research papers and industry papers for ECMDA-FA 2008: We received 87 submissions. Of these, a total of 31 were accepted including 21 research papers and 10 industry papers. We thank them for the thorough and high-quality selection process.

**Network and System Security** Bill Mansoor, 2013-08-26 Many organizations encounter a common problem in their approach to intranet security: They treat intranets as an internal tool that is hidden deep in the corporate network and is somehow immune from external attacks. This is far from the truth, however. An intranet is basically a Web application exposed to a hostile environment the same way as the corporate Web site and therefore vulnerable to the same scope of threats. The fact that it is intended for employees and trusted parties doesn't guarantee anything against hacker attacks, viruses, and spam. Failing to introduce a dedicated intranet security policy entails a range of risks associated with sensitive information leakage and data loss. For many organizations, safeguarding intranets is even more important than protecting their Web sites. Intranets usually contain extremely confidential assets crucial for both day-to-day activity and strategic business development. A successful attack may result in disruption of the organization's operations, significant reputation damage, and infringement of legal regulations. To avoid unexpected embarrassment after launching an intranet, organizations must carefully evaluate the solution's capability to cope with security issues. So, with the preceding in mind, this chapter provides information about all aspects of threats that affect intranet security. The chapter is intended for organizations that understand the changing nature of the threat landscape and what might be done to

mitigate it.

Each of the 13 coasts, from the Gold Coast to the Cooktown Coast, is covered in detail, including marinas, anchorages, passages, wind and wave averages, public pontoons and quick reference information and links for vital weather, search and rescue, notices to mariners and other vital information. It features hundreds of chartlets and high-resolution aerial photos of anchorages to take the guesswork out of anchoring. Each anchorage has information on depth, bottom, mobile reception, marine park zone and recommended wind directions and strengths. The book is also integrated with Navionics and C-Map. Anchorages and passages can be imported into

Navionics and C-Map simply by clicking on the Navionics link  and GPX link  icons throughout the book. The book also provides an extensive reference of useful information for the Queensland Coast such as skills and experience, recommended apps, charts and books, equipping the yacht for cruising, cruising logistics, climate and weather systems, marine hazards and the three major marine parks and their rules. This book will help get the first-time cruiser of the Queensland coast started. For those familiar with the coast, the wealth of information, data and links all pulled together into one place and organised in a systematic way will prove invaluable. For both, the more than one thousand external reference links make it easier to cruise the coast safely and simplify many of the everyday tasks of living on a cruising yacht such as finding and entering a marina and restocking once there.

**Security and Privacy Trends in the Industrial Internet of Things** Cristina Alcaraz, 2019-05-13 This book, written by leaders in the protection field of critical infrastructures, provides an extended overview of the technological and operative advantages together with the security problems and challenges of the new paradigm of the Internet of Things in today's industry, also known as the Industry Internet of Things (IIoT). The incorporation of the new embedded technologies and the interconnected networking advances in the automation and monitoring processes, certainly multiplies the functional complexities of the underlying control system, whilst increasing security and privacy risks. The critical nature of the application context and its relevance for the well-being of citizens and their economy, attracts the attention of multiple, advanced attackers, with stealthy abilities to evade security policies, ex-filter information or exploit vulnerabilities. Some real-life events and registers in CERTs have already clearly demonstrated how the control industry can become vulnerable to multiple types of advanced threats whose focus consists in hitting the safety and security of the control processes. This book, therefore, comprises a detailed spectrum of research papers with

highly analytical content and actuation procedures to cover the relevant security and privacy issues such as data protection, awareness, response and resilience, all of them working at optimal times. Readers will be able to comprehend the construction problems of the fourth industrial revolution and are introduced to effective, lightweight protection solutions which can be integrated as part of the new IIoT-based monitoring ecosystem.
