Shaping the Past Ylva Grufstedt, 2022-07-18 This series provides a multidisciplinary framework for scholarly approaches to video games in the humanities. It focuses especially on the dialectics of methodology and object: how do different scholarly fields apply their theories and methods to video games, and how do video games in turn affect these theories and methods? This series seeks to reconnect media-centric Game Studies to the disciplines it had to distance itself from in its foundation, such as literary studies or film studies, in an attempt to use their differences and contact zones in a mutually productive dialogue. It also seeks to present innovative approaches in other fields in the humanities that have yet to consider video games in a systematic way, and give a home to ground-breaking publications that push the boundaries of existing discourses and debates. In this endeavor, the series is committed to a decidedly global scope as it assembles perspectives from different cultural and academic contexts. In short, this series wants to see what the humanities do with video games and what video games do to the humanities. IPHA - An Open Source Framework for Development of Strategy Games Based on Microsoft Technology Jacob Barkai,2009 Professorial Dissertation from the year 2009 in the subject Computer Science - Theory, grade: 90, Tel-Hai Academic College, language: English, abstract: Strategy computer games are nowadays a very popular and exciting genre in the world of computer games. Many succeeding commercial games were developed since the end 1980's and contributed to the growth and interest in computer games in general and strategy games in particular. Games such as Command & Conquer(TM) series (by Westwood and EA Studios), Civilization(TM) series (by Sid Meier), Warcraft(TM) and StarCraft(TM) series (by Blizzard) entered to the computer games' hall of fame, thanks to their inventiveness, artificial intelligence challenge and visual effects that they offer. Almost every strategy computer game was based on the idea of an electronic board game, a modern brother to the classic, physical board games such as chess, checkers, backgammon, hexxagon and more. An interesting issue is the fact that both the classic board games and the modern strategy computer games are sharing many of the key elements that make the players think and act strategically and tactically, according to the development of the game. This issue is the basis for the project, and discussed further in the next pages. It is common to divide strategy games into two main types: Abstract strategy, where there is perfect information regard to the game's state. An example for an Abstract strategy is Chess. The other type is Concrete strategy where there is incomplete information regard to the game's state. This characteristic makes the game more interesting and surprising. An example for such a game is Stratego. This project aims to serve as an open source code framework, written under Microsoft .NET, for easy creation and expansion of abstract strategy games by providing operational artificial intelligence algorithms and well-defined class libraries based on concepts taken from the game theory for decision making aspe

Online Multiplayer Games William Sims Bainbridge, 2010 This lecture introduces fundamental principles of online multiplayer games, primarily massively multiplayer online role-playing games (MMORPGs), suitable for students and faculty interested both in designing games and in doing research on them. The general focus is human-centered computing, which includes many human-computer interaction issues and emphasizes social computing, but also, looks at how the design of socio-economic interactions extends our traditional notions of computer programming to cover human beings as well as machines. In addition, it demonstrates a range of social science research methodologies, both quantitative and qualitative, that could be used by students for term papers, or by their professors for publications. In addition to drawing upon a rich literature about these games, this lecture is based on thousands of hours of first-hand research experience inside many classic examples, including World of Warcraft, The Matrix Online, Anarchy Online, Tabula Rasa, Entropia Universe, Dark Age of Camelot, Age of Conan, Lord of the Rings Online, Tale in the Desert, EVE Online, Star Wars Galaxies, Pirates of the Burning Sea, and the non-game virtual world Second Life. Among the topics covered are historical-cultural origins of leading games, technical constraints that shape the experience, rolecoding and social control, player personality and motivation, relationships with avatars and characters, virtual professions and economies, social relations inside games, and the implications for the external society. Game theory has become increasingly popular among undergraduate as well as business school students. This text is the first to provide both a complete theoretical treatment of the subject and a variety of real-world applications, primarily in economics, but also in business, political science, and the law. Strategies and Games grew out of Prajit Dutta's experience teaching a course in game theory over the last six years at Columbia University. The book is divided into three parts: Strategic Form Games and Their Applications, Extensive Form Games and Their Applications, and Asymmetric Information Games and Their Applications. The theoretical topics include dominance solutions, Nash equilibrium, backward induction, subgame perfect equilibrium, repeated games, dynamic games, Bayes-Nash equilibrium, mechanism design, auction theory, and signaling. An appendix presents a thorough discussion of single-agent decision theory, as well as the optimization and probability theory required for the course. Every chapter that introduces a new theoretical concept opens with examples and ends with a case study. Case studies include Global Warming and the Internet, Poison Pills, Treasury Bill Auctions, and Final Jeopardy. Each part of the book also contains several chapter-length applications including Bankruptcy Law, the NASDAQ market, OPEC, and the Commons problem. This is also the first text to provide a detailed analysis of dynamic strategic interaction.
