101 Movement Games for Children Huberta Wiertsema,2002 Every body is made to move, and moving is one of the best things we can do for our bodies. children who learn the joy of moving at an early age improve their chances of remaining active and healthy throughout life. The games in this book will also help children develop a healthy sense of play. Thes noncompetitive games - which focus on pure movement, rather than dance or music - stress excitement, humour, challenge, surprise and cooperation. Players just need enthusiasm and a willingness to explore activities with others.

Great Games for Young Children Rae Pica,2006 These new and classic games, each with a noncompetitive twist, are sure to get children up and moving while developing their cognitive, social/emotional, and physical skills. Includes outside games, musical games, circle games, concept games, and cooperative games.

Microfinance Games ,2006 Microfinance has been heralded as an effective way to address imperfections in credit markets. But from a theoretical perspective, the success of microfinance contracts has puzzling elements. In particular, the group-based mechanisms often employed are vulnerable to free-riding and collusion, although they can also reduce moral hazard and improve selection. The authors created an experimental economics laboratory in a large urban market in Lima, Peru and over seven months conducted 11 different games that allow them to unpack microfinance mechanisms in a systematic way. They find that risk-taking broadly conforms to predicted patterns, but that behavior is safer than optimal. The results help to explain why pioneering microfinance institutions have been moving away from group-based contracts. --World Bank web site.

On the Grammar of Optative Constructions Patrick Georg Grosz,2012 The primary aim of this dissertation is to present an analysis for so-called optative constructions, clauses that express a wish, hope or desire without containing a lexical item that means 'wish', 'hope' or 'desire'. A secondary aim is to contrast optative constructions with so-called polar exclamatives, clauses that express surprise, shock or dismay at a given fact without containing a lexical item that means 'surprise', 'shock' or 'dismay'. The goal is to better understand the way in which syntax, semantics and pragmatics interact in order to yield the meanings and uses that these constructions have. The core claim is that we can understand optative constructions by virtue of exploring three properties that they share. First, I argue that optatives (and polar exclamatives) contain a generalized exclamation operator EX, which serves to express an emotion towards the status of the modified proposition on a contextually provided scale. Second, I argue that semantic mood (including factivity and counterfactuality) is encoded in a distinguished Mood head, the content of which co-determines both morphological mood and the material that overtly surfaces in the position of C. Third, I argue for a generalized analysis of prototypical particles, including non-exclusive ONLY, concessive AT LEAST and unstressed DOCH. My analysis treats these particles as truth-conditionally vacuous presupposition triggers, which interact with optativity in three different ways. First, they convey additional information with respect to the modified proposition. Second, they eliminate alternative readings for an ambiguous clause, due to incompatibility. Third, this disambiguating role makes them ideal licensors for a marked utterance type. Chapter 1 of this dissertation is an introductory chapter that presents the core proposal in a nutshell. After this coarse overview, chapter 2 reviews some basic definitions and background on optatives and polar exclamatives. Subsequently, I proceed to a presentation of my entire system in chapter 3. The following chapters discuss each of the three core parts in turn, starting with the EX operator in chapter 4, followed by semantic mood in chapter 5 and finally I discuss particles in chapter 6. Chapter 7 concludes.
