Informatics for the Clinical Laboratory Daniel Cowan, 2007-06-02 This series is directed to healthcare professionals who are leading the transformation of health care by using information and knowledge. Launched in 1988 as Computers in Health Care, the series offers a broad range of titles: some addressed to specific professions such as nursing, medicine, and health administration; others to special areas of practice such as trauma and radiology. Still other books in the series focus on interdisciplinary issues, such as the computer-based patient record, electronic health records, and networked healthcare systems. Renamed Health Informatics in 1998 to reflect the rapid evolution in the discipline now known as health informatics, the series will continue to add titles that contribute to the evolution of the field. In the series, eminent experts, serving as editors or authors, offer their accounts of innovations in health informatics. Increasingly, these accounts go beyond hardware and software to address the role of information in influencing the transformation of healthcare delivery systems around the world. The series also increasingly focuses on "peopleware" and the organizational, behavioral, and societal changes that accompany the diffusion of information technology in health services environments.

The Contribution of Pathology and Laboratory Medicine to Clinical Informatics James M Crawford, Philip C. Chen, 2017-06-01 In the past 30 years, since the development of the first integrated Laboratory Information Systems, the clinical laboratory has provided diagnostic data on patients in vast amounts. However, only now is the inherent value of these data for the management of populations of patients across the continuum of care being tapped. The Contribution of Pathology and Laboratory Medicine to Clinical Informatics explores the broad context of pathology and clinical laboratory data in the rapidly evolving healthcare system and focuses on the mechanism for fully incorporating these data into the management of patients and populations through pathology informatics. The Contribution of Pathology and Laboratory Medicine to Clinical Informatics begins with an overview of the informatics requirements of a 21st century integrated health system and the functional requirements for its information systems. It then explores both the mandatory requirements for integration of pathology informatics into the health system, and opportunities for value-added applications of pathology informatics. Topics include diagnostic reporting, mobile applications, disease surveillance and prevention, support of the physician practice, health information exchanges, metrics for accountability, digital imaging and artificial intelligence, parsing of anatomic pathology information, coding, genomics and microbiomics, safety and validation, patient-generated data, pathology data in the community, biorepositories, insurance benefits and design, and training in informatics. The Contribution of Pathology and Laboratory Medicine to Clinical Informatics is intended to help inform clinical pathology practitioners, pathologists-in-training, pathology researchers, and health care information specialists, and enable them to more fully realize the opportunities emanating from use of pathology and clinical laboratory data. Explores the broad application of pathology informatics within the context of rapidly evolving healthcare systems Offers a broad overview of how healthcare can be integrated across all data sources, especially those data streams coming from the clinical laboratory, imaging, and pharmacy, as well as from electronic health records, and financial and actuarial sources Develops a shared language for clinicians and researchers within pathology and laboratory medicine, managers of pathology and clinical chemistry laboratories, and healthcare information specialists

Laboratory Management Candis A. Kinkus, 2011-11-01 A key issue for every laboratory and individual practitioner is the assessment of risk and current working knowledge of the standards of care established for diagnostic testing via guidelines, major studies and trials. The diagnostic Standards of Care series presents an overview of the key diagnoses in clinical pathology using case examples to illustrate effective analysis of the case in light of current evidence and standards for the problem discussed. In addition to being practical diagnostic guides, these volumes will have a unique emphasis on quality assurance and evidence-based testing practices.

Laboratory Management Information Systems: Current Requirements and Future Perspectives Moumtzoglou, Anastasius, 2014-07-31 Technological advances have revolutionized the way we manage information in our daily workflow. The medical field has especially benefitted from these advancements, improving patient treatment, health data storage, and the management of laboratory samples and results. Laboratory Management Information Systems: Current Requirements and Future Perspectives responds to the issue of administering appropriate regulations in a medical laboratory environment in the era of telemedicine, electronic health records, and other e-health services. Exploring concepts such as the implementation of ISO 15189:2012 policies and the effects of e-health application, this book is an integral reference source for researchers, academicians, students of health care programs, health professionals, and laboratory personnel.

Laboratory Quality Management System World Health Organization, 2011 Achieving, maintaining and improving accuracy, timeliness and reliability are major challenges for health laboratories. Countries worldwide committed themselves to build national capacities for the detection of, and response to, public health events of international concern when they decided to engage in the International Health Regulations implementation process. Only sound management of quality in health laboratories will enable countries to produce test results that the international community will trust in cases of international emergency. This handbook was developed through collaboration between the WHO Lyon Office for National Epidemic Preparedness and Response, the United States of America Centers for Disease Control and Prevention (CDC) Division of Laboratory Systems, and the Clinical and Laboratory Standards Institute (CLSI). It is based on training sessions and modules provided by the CDC and WHO in more than 25 countries, and on guidelines for implementation of ISO 15189 in diagnostic laboratories, developed by CLSI. This handbook is intended to provide a comprehensive reference on Laboratory Quality Management System for all stakeholders in health laboratory processes, from management, to administration, to bench-work laboratorians. This handbook covers topics that are essential for quality management of a public health or clinical laboratory. They are based on both ISO 15189 and CLSI GP26-A3 documents. Each topic is discussed in a separate chapter. The chapters follow the framework developed by CLSI and are organized as the 12 Quality System Essentials.

Disease Control Priorities, Third Edition (Volume 9) Dean T. Jamison, Hellen Gelband, Susan Horton, Prabhat Jha, Charles N. Mock, Rachel Nugent, 2017-12-06 As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a highest-priority essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

Spontaneous Pathology of the Laboratory Non-human Primate Alys Bradley, Jennifer Chilton, Beth Mahler, 2023-06-20 Spontaneous Pathology of the Laboratory Non-human Primate serves as a go to resource for all pathologists working on primates in safety assessment studies. In addition, it helps diagnostic veterinary pathologists rule out spontaneous non-clinical disease pathologies when assigning cause of death to species in zoological collections. Primate species included are rhesus, cynomolgus macaques and marmosets. Multi-authored chapters are arranged by organ system, thus providing the necessary information for continued research. Pathologists often face a lack of suitable reference materials or historical data to determine if pathologic changes they are observing in monkeys are spontaneous or a consequence of other treatments or factors. Contains color illustrations that depict the most common lesions to augment descriptions. Covers descriptions that are compliant with the International Harmonization of Nomenclature and Diagnostic Criteria (INHAND) guidelines set forth by the Society of Toxicologic Pathology (STP). Provides pathologists with common terms that are compliant with the FDA's Standard for Exchange of Nonclinical Data (SEND) guidelines.

the new demands upon practitioners, the text concentrates on critical issues of lab management including strategic thinking and planning, maximizing reimbursement, practical financial issues, compliance with governmental regulations, optimizing productivity and much more.

Strategic ICT Planning in Pathology Markus Belkin, Brian Corbitt, Nilmini Wickramasinghe, 2012-08-24 There is little doubt that information technology is a major force in transforming healthcare systems: physicians need to have considerable patient data at hand, even if diagnosis and treatment are relatively straightforward. But data are only as useful as ICT—information communication technology—systems make them. Inefficient handling of data can quickly lead to chaos, and possibly to fatalities. *Strategic ICT Planning in Pathology* illuminates these problems, as well as their potential solutions, based on a unique body of research from Australia. Focusing on core strategic factors such as laboratory information systems capability and effectiveness, business-IT alignment, strategic spending, research and education, and end-user involvement, the book explains why pathology labs lag behind other hospital departments. Survey and focus group findings pinpoint the importance of Strategic Information System Planning (SISP), and its relationship to quality service delivery and an improved bottom line [ok?]. Among the topics covered: Approaches to SISP and IS effectiveness measurement. The OpenLabs project and pathology practice. Development of a framework for SISP. Focus groups: the view from the hospital laboratory, the private pathology lab, and the experts. Key findings and their implications for strategy, planning, and business outcomes. Future research directions, including reverse SISP. *Strategic ICT Planning in Pathology* is a go-to resource for healthcare administrators and researchers in healthcare management, health policy, and health services research interested in troubleshooting systems, conducting surveys on IS, or better understanding how quality ICT works.
