Teaching Music Improvisation with Technology Michael Fein,2017-02-03 Incorporating technology in music classrooms can take the mystery out of improvisation. What music technology does is establish a strong foundation for chord, scale, phrase, ear training, and listening exercises, creating a solid backdrop for student expression. As author and educator Mike Fein shows, technology is a valuable tool that can be used effectively to supplement student practice time while also developing the skills necessary to become a proficient improviser. Complete with notated exercises, accompaniment tracks, and listening resources, this book gives teachers methods to set their students free to make mistakes and to develop their own ear for improvisation at their own pace. Broken down into significant areas of music technology, each chapter focuses on developing a new skill and guides readers to tangible outcomes with the assistance of hands-on activities that can be immediately implemented into the classroom. In addition to these hands-on activities, each chapter provides the reader with an iPad Connection to various iOS applications, which allows teachers and students another, albeit significantly less expensive, medium through which to learn, share, and create art. This book will appeal to music educators of students in grades K-12. It will serve collegiate music education courses secondarily, and will also appeal to those music educators who work with improvisation and technology.

Recharge Your Library Programs with Pop Culture and Technology: Linda D. Behen,2013-06-17 Learn how to integrate pop culture and technology into school library programs and classrooms, and make today's digital content, mobile devices, and students' changing interests work to the educator's advantage. Today's school libraries need to evolve and meet the needs of 21st-century students—the instruction, programming, and library services must be relevant to today's learners. Additionally, the interactions

between educators and the students are what make the critical difference in the students' learning, and turn the library and classroom into places where they will find, assimilate, experience, and understand information. This book provides practical strategies for using pop culture and technology trends to connect with easily distracted middle and high school students and hold their attention. Author Linda D. Behen addresses why school libraries are in transition and why there is a need for dramatic change. She discusses the evolution of all libraries in response to digital content; ubiquitous mobile devices such as smart phones, iPads, and other tablet computers; patrons' changing interests; and the ways in which schools and school libraries have found to effectively adapt to technology changes and student needs. This book is essential for middle and high school librarians and educators, library school students and instructors, and young adult public librarians.

Interactive Visual Ideas for Musical Classroom Activities Catherine Dwinal,2020-07 The digital interactive projection system is a staple of nearly every music classroom in the United States. By allowing teachers to show students methods and outcomes from a computer, these systems have become a necessity for reaching students who grew up as digital natives. But, as author and distinguished music educator Catherine Dwinal demonstrates, such systems can be much more meaningful pedagogical tools than simple replacements for chalkboards. In this book, she offers practical tips, tricks, resources, and 50 activities ideal to use alongside classroom projection systems. She focuses especially on tips and activities for beginning

teachers, giving them the confidence to take a step out of their comfort zone and learn new ways of engaging students with technology. More than this, she provides reference materials that will serve as a trusted reference resource for years to come.

ActionScript 3.0 Cookbook Joey Lott,Darron Schall,Keith Peters,2006-10-11 Well before Ajax and Microsoft's Windows Presentation Foundation hit the scene, Macromedia offered the first method for building web pages with the responsiveness and functionality of desktop programs with its Flash-based Rich Internet Applications. Now, new owner Adobe is taking Flash and its powerful capabilities beyond the Web and making it a full-fledged development environment. Rather than focus on theory, the ActionScript 3.0 Cookbook concentrates on the practical application of ActionScript, with more than 300 solutions you can use to solve a wide range of common coding dilemmas. You'll find recipes that show you how to: Detect the user's Flash Player version or their operating system Build custom classes Format dates and currency types Work with strings Build user interface components Work with audio and video Make remote procedure calls using Flash Remoting and web services Load, send, and search XML data And much, much more ... Each code recipe presents the Problem, Solution, and Discussion of how you can use it in other ways or personalize it for your own needs, and why it works. You can quickly locate the recipe that most closely matches your situation and get the solution without reading the whole book to understand the underlying code. Solutions progress from short recipes for small problems to more complex scripts for thornier riddles, and the discussions offer a deeper analysis for resolving similar issues in the future, along

with possible design choices and ramifications. You'll even learn how to link modular ActionScript pieces together to create rock-solid solutions for Flex 2 and Flash applications. When you're not sure how ActionScript 3.0 works or how to approach a specific programming dilemma, you can simply pick up the book, flip to the relevant recipe(s), and quickly find the solution you're looking for. Technocreep Thomas P. Keenan,2014-09-13 "Technology is rapidly moving into our bodies," writes

cyber expert Keenan, "and this book gives a chilling look ahead into where that road may lead us – on a one way trip to the total surrender of privacy and the commoditization of intimacy." Here is the definitive dissection of privacy-eroding and life-invading technologies, coming at you from governments, corporations, and the person next door. Take, for example, "Girls Around Me": a Russian-made iPhone App that allowed anyone to scan the immediate vicinity for girls and women who checked in on Foursquare and had poorly secured Facebook profiles. It combined this information in a way never intended by the original poster. Going to a Disney theme park? Your creepy new "MagicBand" will alert Minnie Mouse that you're on the way and she'll know your kid's name when you approach her. Thinking about sending your DNA off to Ancestry.com for some "genetic genealogy"? Perhaps you should think again: your genetic information could be used against you. With security scares like the Heartbleed bug (which compromised even supposedly safe internet behemoths like Google and Yahoo!) becoming more commonplace, this book is a must-read for anybody who values their privacy in a wired world.

Schools, Curriculum and Civic Education for Building Democratic Citizens Murray Print,Dirk Lange,2013-02-12 How can schools and the school curriculum contribute to building democratic citizens? This is a major question posed by governments, educational systems, schools, teachers and researchers around the world. One important way is to identify the competences needed for preparing democratic citizens and incorporate these within both the formal and informal school curriculum. Another question must then be posed- what competences do young citizens need to be considered as active and engaged in modern democracies? In 2011 an invited research symposium of leading civic and political educators, and social scientists from across Europe met in Hannover, Germany to consider this key concern facing Europe today. In examining the above questions the symposium addressed two significant issues: 1. Identify key competencies required for active citizenship of young people in Europe of the future. 2. Translate those competencies to school-based activities in the form of curricular and pedagogical strategies. The publication Civic Education and Competences for Engaging Citizens in Democracies addressed the first issue and this volume addresses the second issue. Through discussion in the invited symposium, previously prepared

papers, and participation in a modified Delphi Technique the participants have prepared chapters for this book. The chapters of this book represent the contribution of the participants before, during and after the symposium with opportunities for review and reflection about competences for democratic citizenship and the role of schools and the curriculum. Murray Print and Dirk Lange are professors from the University of Sydney and Leibniz University of Hannover respectively and are national leaders in civics and citizenship education in their respective countries. They have brought together a group of leading European civic and citizenship educators from different academic fields to explore the key issue and to identify the competences for young people to become active and engaged European citizens.

Blind Descent James M. Tabor,2011-02-15 "Heart-stopping and relentlessly gripping. Tabor takes us on an odyssey into unfathomable worlds beneath us, and into the hearts of rare explorers who will do anything to get there first."—Robert Kurson, author of ShadowDivers In 2004, two great scientist-explorers attempted to find the bottom of the world. American Bill Stone took on the vast, deadly Cheve Cave in southern Mexico. Ukrainian Alexander Klimchouk targeted Krubera, a freezing nightmare of a supercave in the war-torn former Soviet republic of Georgia. Both men spent months almost two vertical miles deep, contending with thousand-foot drops, raging whitewater rivers, monstrous waterfalls, mile-long belly crawls, and the psychological horrors produced by weeks in absolute darkness, beyond all hope of rescue. Based on his unprecedented access to logs and journals as well as hours of personal interviews, James Tabor has crafted a thrilling exploration of man's timeless urge to discover—and of two extraordinary men whose pursuit of greatness led them to the heights of triumph and the depths of tragedy. Blind Descent is an unforgettable addition to the classic literature of true-life adventure, and a testament to human survival and endurance. "Holds the reader to his seat, containing dangers aplenty with deadly falls, killer microbes, sudden burial, asphyxiation, claustrophobia, anxiety, and hallucinations far underneath the ground in a lightless world. Using a pulse-pounding narrative, this is tense real-life adventure pitting two master

cavers mirroring the cold war with very uncommonly high stakes."—Publishers Weekly (starred review) "A fascinating and informative introduction to the sport of cave diving, as well as a dramatic portrayal of a significant man-vs.-nature conflict. . . . What counts is Tabor's knack for maximizing dramatic potential, while also managing to be informative and attentive to the major personalities associated with the most important cave explorations of the last two decades."—Kirkus Reviews Includes a 16-pg black and white insert

Consider Phlebas Iain M. Banks,2009-12-01 The first book in Iain M. Banks's seminal science fiction series, The Culture. Consider Phlebas introduces readers to the utopian conglomeration of human and alien races that explores the nature of war, morality, and the limitless bounds of mankind's imagination. The war raged across the galaxy. Billions had died, billions more were doomed. Moons, planets, the very stars themselves, faced destruction, cold-blooded, brutal, and worse, random. The Idirans fought for their Faith; the Culture for its moral right to exist. Principles were at stake. There could be no surrender. Within the cosmic conflict, an individual crusade. Deep within a fabled labyrinth on a barren world, a Planet of the Dead proscribed to mortals, lay a fugitive Mind. Both the Culture and the Idirans sought it. It was the fate of Horza, the Changer, and his motley crew of unpredictable mercenaries, human and machine, actually to find it, and with it their own destruction.
