Modern Radar Detection Theory Antonio De Maio, Maria Sabrina Greco, 2015-11-25 Modern radar detection is the new frontier for advanced radar systems capable of operating in challenging scenarios with a plurality of interference sources, both manmade and natural. Written by top researchers and recognized leaders in the field, this is the first book to provide a comprehensive understanding of the current research trends in modern radar detection. It updates readers with the latest radar signal processing algorithms now capable with high-speed computer chips and sophisticated programs. It also includes examples and applications from real systems. This is essential reading for radar systems design engineers within aerospace companies, military radar engineers, and aerospace contractors/consultants.

An Educated Guide to Speeding Tickets Richard Wallace, 1996 A police officer for 14 years in the state of Connecticut, author Richard Wallace II is an expert on the subject of speeding tickets, and the various speed detection devices being currently used by members of law enforcement today. He has been directly involved in the stopping of motorists on speeding related charges, and has issued many citations for said violations over his 14 year career in law enforcement. Who better to know the ins and outs about speeding and how speed is detected, but a police officer! By

using this information, one can expect to save hundreds of dollars in fines and insurance charges, as well as keeping ones operator's license. The small price paid for this book will be saved over and over!

Detecting and Classifying Low Probability of Intercept Radar Phillip E. Pace, 2009 This comprehensive book presents LPI radar design essentials, including ambiguity analysis of LPI waveforms, FMCW radar, and phase-shift and frequency-shift keying techniques. Moreover, you find details on new OTHR modulation schemes, noise radar, and spatial multiple-input multiple-output (MIMO) systems. The book explores autonomous non-linear classification signal processing algorithms for identifying LPI modulations. It also demonstrates four intercept receiver signal processing techniques for LPI radar detection that helps you determine which time-frequency, bi-frequency technique best suits any LPI modulation of interest.--Publisher.

This essential reference: Explains how to design your own radar devices Demonstrates how to process data from small radar sensors Provides real-world, measured radar data to test algorithms before investing development time Complete with downloadable MATLAB® scripts and actual radar measurements, Small and Short-Range Radar Systems empowers you to rapidly develop small radar technology for your application.

Recent Advancements in Radar Imaging and Sensing Technology Piotr Samczynski, Elisa

Giusti, 2021-07-21 The aim of this Printed Edition of Special Issue entitled "Recent Advancements in Radar Imaging and Sensing Technology" was to gather the latest research results in the area of modern radar technology using active and/or radar

imaging sensing techniques in different applications, including both military use and a broad spectrum of civilian applications. As a result, the 19 papers that have been published highlighted a variety of topics related to modern radar imaging and microwave sensing technology. The sequence of articles included in the Printed Edition of Special Issue dealt with wide aspects of different applications of radar imaging and sensing technology in the area of topics including high-resolution radar imaging, novel Synthetic Aperture Radar (SAR) and Inverse SAR (ISAR) imaging techniques, passive radar imaging technology, modern civilian applications of using radar technology for sensing, multiply-input multiply-output (MIMO) SAR imaging, tomography imaging, among others.

Through-the-Wall Radar Imaging Moeness G. Amin, 2017-12-19 Through-the-wall radar imaging (TWRI) allows police, fire and rescue personnel, first responders, and defense forces to detect, identify, classify, and track the whereabouts of humans and moving objects. Electromagnetic waves are considered the most effective at achieving this objective, yet advances in this multi-faceted and multi-disciplinary technology require taking phenomenological issues into consideration and must be based on a solid understanding of the intricacies of EM wave interactions with interior and exterior objects and structures. Providing a broad overview of the myriad factors involved, namely size, weight, mobility, acquisition time, aperture distribution, power, bandwidth, standoff distance, and, most importantly, reliable

performance and delivery of accurate information, Through-the-Wall Radar Imaging examines this technology from the algorithmic, modeling, experimentation, and system design perspectives. It begins with coverage of the electromagnetic properties of walls and building materials, and discusses techniques in the design of antenna elements and array configurations, beamforming concepts and issues, and the use of antenna array with collocated and distributed apertures. Detailed chapters discuss several suitable waveforms inverse scattering approaches and revolve around the relevance of physical-based model approaches in TWRI along with theoretical and experimental research in 3D building tomography using microwave remote sensing, high-frequency asymptotic modeling methods, synthetic aperture radar (SAR) techniques, impulse radars, airborne radar imaging of multi-floor buildings strategies for target detection, and detection of concealed targets. The book concludes with a discussion of how the Doppler principle can be used to measure motion at a very fine level of detail. The book provides a deep understanding of the challenges of TWRI, stressing its multidisciplinary and phenomenological nature. The breadth and depth of topics covered presents a highly detailed treatment of this potentially life-saving technology.

Sea Clutter Keith D. Ward, Simon Watts, Robert J.A. Tough, 2006-06-21 *Sea Clutter: Scattering, the K Distribution and Radar Performance* examines the statistics of radar scattering from the sea surface in terms of their relevance to radar

operating in a maritime environment; including remote sensing, surveillance and targeting applications. A lot of the work in the book is based on the compound Kdistribution model for the amplitude statistics of sea clutter. In addition, the book addresses the specification of performance required by customers and the measurement of performance of systems supplied to customers.

Driver's License and Registration Please Robert M. Arnold, 2012-08-24 Biography, Robert M. Arnold Robert Arnold is a lifetime resident of Virginia and currently the President of Eagle Eye Enterprises LLC, a company he founded in 1997. Eagle Eye Enterprises offers RADAR and LASER training, agency evaluations, and consulting to Law Enforcement agencies nationwide. Mr. Arnold developed RADAR and LASER training software that is in use nationwide, to include Northern Virginia Criminal Justice Academy. His training and software has raised the bar in police training and has set the industry standard to an unprecedented level. He has trained and developed NVCJA instructors in the field of RADAR. Master Police Officer Arnold retired in March of 2011 from the Prince William County Police Department after serving over twenty-seven years. He is a founding member of his departments Motor Squad that was created in 1987 and he remained there until his 2011 retirement. During his Police career he served ten years as a Special Weapons and Tactics team member, Certified DCJS Instructor in the areas of RADAR, LASER, Police Motorcycle, and Emergency Vehicle Operator Course (EVOC). He

received countless commendations for his work throughout his career. He authored his departments motor squad operational and training manuals and escort protocol. He developed and implemented his motor squads training program and provided continuous motorcycle training and retraining to all squad members until his 2011 retirement. His motorcycle training approach included a skills level evaluation program that measured individual riding levels. This program was divided into five categories of riding proficiency that proved to develop a riders incentive to set goals to achieve greater riding skills... Shortly after attending a Virginia Instructor Development course in 1990 and successfully completing his RADAR Instructor certification through the Virginia Commonwealth University, he developed a speed enforcement training program that he managed and retained the Lead Instructor role until his retirement. His program evolved over the years and is considered an industry leading training program throughout the nation. He is considered an expert in his field and has provided expert testimony during RADAR and LASER cases in the Circuit Courts of Prince William and Madison counties. The Prince William County Police Department was the first Law Enforcement Agency in Virginia to use the speed measuring device, LIDAR. Robert is credited with its implementation and provided LIDAR training seminars throughout the state of Virginia to assist other jurisdictions during their startup phase. His efforts lead to the successful statewide expansion of this speed measuring equipment that resulted in legislation authorizing

the use statewide. Roberts career roles included adjunct Instructor positions with the Prince William County and the Northern Virginia Criminal Justice Academies. He provided instruction to hundreds of law enforcement students in the operation of emergency vehicles and police motorcycles. He devoted his entire career to achieving expert status in his field and has shared his expertise through the training of countless Law Enforcement Officials.

Arduino based RADAR System Anuj Dutt, 2014-06-25 Research Paper from the year 2014 in the subject Electrotechnology, grade: B.Tech, , language: English, abstract: RADAR is an object detection system which uses radio waves to determine the range, altitude, direction, or speed of objects. The radar dish or antenna transmits pulses of radio waves or microwaves which bounce off any object in their path. Arduino is a single-board microcontroller to make using electronics in multidisciplinary projects more accessible. This project aims at making a RADAR that is efficient, cheaper and reflects all the possible techniques that a radar consists of.
