Deep Learning-Based Approaches for Sentiment Analysis Basant Agarwal,Richi Nayak,Namita Mittal,Srikanta Patnaik,2020-01-24 This book covers deep-learning-based approaches for sentiment analysis, a relatively new, but fast-growing research area, which has significantly changed in the past few years. The book presents a collection of state-of-the-art approaches, focusing on the best-performing, cutting-edge solutions for the most common and difficult challenges faced in sentiment analysis research. Providing detailed explanations of the methodologies, the book is a valuable resource for researchers as well as newcomers to the field.

Qualitative Research in Digital Environments Alessandro Caliandro,Alessandro Gandini,2016-12-08 This book offers a toolkit of methods and technologies to undertake qualitative research on digital spaces. Unlike commonly used traditional methodological strategies, which are ‘retrofitted’ to digital spaces, Qualitative Research in Digital Environments offers researchers a set of ‘digitally native’ tools that are designed for online social environments. Thanks to a broad range of cases including Louis Vuitton, YouTube and the concept of ‘hipsterism’, this text illustrates the practical applications of techniques and tools over the most popular social media environments. This book will be a valuable guide to qualitative research for marketing students, researchers and practitioners, as well as a central reference point for tutors in the growing field of Digital Sociology.

Tutorials on the Foundations of Cryptography Yehuda Lindell,2017-04-05 This is a graduate textbook of advanced tutorials on the theory of cryptography and computational complexity. In particular, the chapters explain aspects of garbled circuits, public-key cryptography, pseudorandom functions, one-way functions, homomorphic encryption, the simulation proof technique, and the complexity of differential privacy. Most chapters progress methodically through motivations, foundations, definitions, major results, issues surrounding feasibility, surveys of recent developments, and suggestions for further study. This book honors Professor Oded Goldreich, a pioneering scientist, educator, and mentor. Oded was instrumental in laying down the foundations of cryptography, and he inspired the contributing authors, Benny Applebaum, Boaz Barak, Andrej Bogdanov, Iftach Haitner, Shai Halevi, Yehuda Lindell, Alon Rosen, and Salil Vadhan, themselves leading researchers on the theory of cryptography and computational complexity. The book is appropriate for graduate tutorials and seminars, and for self-study by experienced researchers, assuming prior knowledge of the theory of cryptography.

Axions Markus Kuster,Georg Raffelt,Berta Beltrán,2007-12-07 Axions are peculiar hypothetical particles that could both solve the CP problem of quantum chromodynamics and at the same time account for the dark matter of the universe. Based on a series of lectures by world experts in this field held at CERN (Geneva), this volume provides a pedagogical introduction to the theory, cosmology and astrophysics of these fascinating particles and gives an up-to-date account of the status and prospect of ongoing and planned experimental searches.

The Peaceful Pill Handbook Philip Nitschke,Fiona Stewart,2006-09

Electronic Circuits Mike Tooley,2019-11-07 Electronics explained in one volume, using both theoretical and practical applications. Mike Tooley provides all the information required to get to grips with the fundamentals of electronics, detailing the underpinning knowledge necessary to appreciate the operation of a wide range of electronic circuits, including amplifiers, logic circuits, power supplies and oscillators. The 5th edition includes an additional chapter showing how a wide range of useful electronic applications can be developed in conjunction with the increasingly popular Arduino microcontroller, as well as a new section on batteries for use in electronic equipment and some additional/updated student assignments. The book's content is matched to the latest pre-degree level courses (from Level 2 up to, and including, Foundation Degree and HND), making this an invaluable reference text for all study levels, and its broad coverage is combined with practical case studies based in real-world engineering contexts. In addition, each chapter includes a practical investigation designed to reinforce learning and provide a basis for further practical work. A companion website at <http://www.key2electronics.com> offers the reader a set of spreadsheet design tools that can be used to simplify circuit calculations, as well as circuit models and templates that will enable virtual simulation of circuits in the book. These are accompanied by online self-test multiple choice questions for each chapter with automatic marking, to enable students to continually monitor their own progress and understanding. A bank of online questions for lecturers to set as assignments is also available.

Downward Causation and the Neurobiology of Free Will Nancey Murphy,George F.R. Ellis,Timothy O'Connor,2009-09-30 How is free will possible in the light of the physical and chemical underpinnings of brain activity and recent neurobiological experiments? How can the emergence of complexity in hierarchical systems such as the brain, based at the lower levels in physical interactions, lead to something like genuine free will? The nature of our understanding of free will in the light of present-day neuroscience is becoming increasingly important because of remarkable discoveries on the topic being made by neuroscientists at the present time, on the one hand, and its crucial importance for the way we view ourselves as human beings, on the other. A key tool in understanding how free will may arise in this context is the idea of downward causation in complex systems, happening coterminously with bottom up causation, to form an integral whole. Top-down causation is usually neglected, and is therefore emphasized in the other part of the book's title. The concept is explored in depth, as are the ethical and legal implications of our understanding of free will. This book arises out of a workshop held in California in April of 2007, which was chaired by Dr. Christof Koch. It was unusual in terms of the breadth of people involved: they included physicists, neuroscientists, psychiatrists, philosophers, and theologians. This enabled the meeting, and hence the resulting book, to attain a rather broader perspective on the issue than is often attained at academic symposia. The book includes contributions by Sarah-Jayne Blakemore, George F. R. Ellis , Christopher D. Frith, Mark Hallett, David Hodgson, Owen D. Jones, Alicia Juarrero, J. A. Scott Kelso, Christof Koch, Hans Küng, Hakwan C. Lau, Dean Mobbs, Nancey Murphy, William Newsome, Timothy O'Connor, Sean A.. Spence, and Evan Thompson.

Micro Meso Macro Hans Liljenström,Uno Svedin,2005-05-03 In the domain of science concerned with systems structure and behavior, the issue of the relationship between the micro and the macro level is of key importance. This book concentrates on the interplay between these levels and has a special focus on the level “in

between” – the meso level. An investigation of those links is made through a number of cases from different domains of science, including physics, chemistry, ecology, social science, economics and technology. What is evident is that there are facets regarding meso-level issues that are similar between cases, but also that the domains differ in various ways. This is particularly exemplified by the differences in perspectives from which the natural and social sciences deal with scaling issues. The various examples provided in this book mirror its overriding theme: systems complexity. Contents:The “Vertical” System Structure and Meso-Level Characteristics:Mesoscopic Levels in Science – Some Comments (H Haken)The Necessity for Mesoscopic Organization to Connect Neural Function to Brain Function (W J Freeman)A Revolution in the Middle Kingdom (R E Ulanowicz)Inner and Outer Dynamics:Time Rescaling and Generalized Entropy in Relation to the Internal Measurement Concept (I Rojdestvenski & M G Cottam)Resource Dynamics, Social Interactions, and the Tragedy of the Commons (A Mashanova & R Law)Stability of Social Interaction (S D Flâm)Resilience and Shocks:Systems, Shocks and Time Bombs (N Winder)Resilience in Utility Technologies (R Seaton)Risk and Crisis Management in Complex Systems (K Bertels & J-M Jacques)and other articles Readership: Graduate students, researchers, practitioners, professionals and general readers in any discipline. Keywords:Systems Analysis;Non-linear;Dynamics;Complexity;Networks;Scaling;Meso Scale;Resilience;Environment;Brain;Mathematical ModelsKey Features:A unique focus on the mesoscopic level of complex systemsNew views on the interplay between the spatial and temporal scalesExamples from many fields of science, connected by their systems analysis approach

Freshwater Microplastics Martin Wagner,Scott Lambert,2020-10-08 This volume focuses on microscopic plastic debris, also referred to as microplastics, which have been detected in aquatic environments around the globe and have accordingly raised serious concerns. The book explores whether microplastics represent emerging contaminants in freshwater systems, an area that remains underrepresented to date.Given the complexity of the issue, the book covers the current state-of-research on microplastics in rivers and lakes, including analytical aspects, environmental concentrations and sources, modelling approaches, interactions with biota, and ecological implications. To provide a broader perspective, the book also discusses lessons learned from nanomaterials and the implications of plastic debris for regulation, politics, economy, and society. In a research field that is rapidly evolving, it offers a solid overview for environmental chemists, engineers, and toxicologists, as well as water managers and policy-makers.
