Patent Fundamentals for Scientists and Engineers Thomas T. Gordon, Arthur S. Cookfair, Vincent G. LoTempio, Brendan S. Lillis, 2012-09-27 The most significant overhaul of the U.S. patent laws in decades occurred with the recent passage of the Leahy-Smith America Invents Act (AIA). The Independent Inventor's Handbook Louis Foreman, Jill Gilbert Welytok, 2018-07-27 How do you actually turn a million-dollar idea into a million dollars? From scribble-on-the-napkin to product-on-the market, *The Independent Inventor's Handbook* explains everything a potential inventor needs to know and the tools he or she needs to use to take a raw concept and turn it into reality. Written by Louis J. Foreman, creator of the PBS series *Everyday Edisons* and a holder of multiple patents, together with patent attorney Jill Gilbert Welytok, here's a book that speaks directly to the inventive American—the entrepreneur, the tinkerer, the dreamer, the basement scientist, the stay-at-home mom who figures out how to do it better. (over one million of them file patents each year.) Here is everything a future inventor needs: Understanding the difference between a good idea and a marketable idea. Why investing too much money at the outset can sink you. The downside of design patents, and how best to file an application for a utility patent. Surveys, online test runs, and other strategies for market research on a tight budget. Plus the effective pitch (hint: never say your target audience is everyone), questions to ask a prospective manufacturer, 14 licensing land mines to avoid, looks-like versus works-like prototypes, Ten Things Not to Tell a Venture Capitalist, and how to protect your invention once it's on the market. Appendices include a glossary of legal, manufacturing, and marketing terms, a sample nondisclosure agreement, and a patent application, deconstructed.

Evil Machines Terry Jones, 2011-11-10 How do you feel about your phone? Or your car? You probably don't think about them much, except when they go wrong. But what if they go really wrong and turn properly bad – evil, even? Join Terry Jones on a hilariously disturbing journey into the dark heart of machines that go wrong: meet the lift that takes people to places they don't want to go, the vacuum cleaner that's just too powerful, the apparently nice bomb, the truthful phone, the terrifying train to anywhere, and Mrs. Morris, a little old lady from Glasgow who turns out to be a very resourceful heroine... Brisk and cheerful on the outside, but as edgy and uncomfortable as any of Roald Dahl's Tales of the Unexpected within, Terry

Jones's collection of thirteen cautionary fables will make you look at the 'helpful' inventions that surround you in a very different way. A brilliantly-written and gleefully mischievous book, suitable for Luddites of all ages or anyone who likes a bit of Pythonesque edge to their silliness.
